Awards

1.1 THE GIS CHAMPION AWARD

1.1.1 GIS CHAMPION

An individual whose actions promote the use of GIS

GIS CHAMPION AWARD

Figure 1.1: Example GIS Champion Award

Background

Though Allegan County has had a formal GIS department for over 20 years, few people have learned to use it.

Statement of Problem

GIS is underutilized in Allegan County government. The county would benefit from more GIS use in its government. Currently there is no formal recognition of individuals that promote GIS.

Analysis

The GIS Champion Award is a simple method of recognizing those that promote GIS in the county.

Past GIS Award Recipients

- Ian Hanes
 - Karen
 - Brian Redmon
-

2.1 ABOUT DOCUMENTATION

2.1.1 HOW JALAPEÑO WORKS

PROBLEM AND ANALYSIS

Background

GIS Services has complicated and evolving workflows and uses everchanging technologies

lems with:

- version control
- finding the documentation
- disseminating the documentation

Statement of Problem

GIS documentation has traditionally been done in different formats and stored in many different files and folders in the county network. This has resulted in prob-

Analysis

The Jalapeño folder along with some open-source software provides a robust documentation tool for GIS documentation.

Default sizes in Jalapeño

PROJECT NOTES :

- jalapeno folder is a git package <https://github.com/nbesteman/jalapeno>
- Project is coded with relative paths and jalapeno can be located anywhere.

Project File Structure:

...\\jalapeno\\..

folder	description
.git	versioning repository for Jalapeño
documentation	resources used in Jalapeño
processing	.tex documents and build folders
source	common image files
temp	untracked folder for temp storage

...\\jalapeno\\documentation\\..

folder or file	description
classDocs	TeX class documentation
DevNotes	Notes and Mind Maps for Jalapeño
latexamples	TeX example code
moduleTemplates	.tex templates
packageDocs	TeX package documentation
readingRoom	Resources linked in Jalapeño
unsorted	Unsorted documentation
gitnotes.txt	git commands notes

...\\jalapeno\\processing\\..

folder or file	description
archive	Processing backup folder
...Part	Folders of book <i>parts</i>
build	TEX folder for .pdf output and temp files
build\\referenceEntries.bib	Entries that appear in references
preamble.tex	preamble code for all documents
titlePages	Assortment of .tex title pages
compileFull.sh	pdflatex, bibtex, makeglossaries, makeindex, pdflatex, pdflatex
compileMainX2.sh	pdflatex, pdflatex
GISDocumentation.tex	Master document code
glossaryEntries.tex	Entries that appear in glossary
indexEntries.tex	Entries that appear in the index

...\\jalapeno\\processing\\preamble..

folder or file	description
chapterStyles.tex	Sets chapter title page attributes with Memoir Class
colorDefs.tex	Defines custom colors
graphicsPath.tex	Defines graphics variable
pageLayoutCommands.tex	Sets spacing and typeface for headings of Sections down to Sub-paragraphs in mainmatter
pageLayoutCommandsAlt.tex	Sets spacing and typeface for headings of Sections down to Sub-paragraphs in backmatter
pageStyles.tex	Sets header and footer properties
preamble.tex	Preamble used to compile main document
subSectionPreamble.tex	Preamble used to compile any subsection document

U S I N G T H E G L O S S A R Y

Glossary Requirements

Glossary commands require a Perl interpreter. Activeperl is a free Perl interpreter and can be downloaded from:

<https://www.activestate.com/activeperl/downloads> (A typical installation adds Perl to your path). Compiling the glossary requires running the makeglossaries command either in a L^AT_EX IDE or in command line as described here. PDFLatex must be run first to create a .aux file that is used by makeglossaries to create an .gls file. After the .gls file is created, PDFLatex must be run again to insert the glossary at the \printglossaries location.

Creating a new glossary entry

To **create a new glossary entry**: Add an entry to glossaryEntries.tex. Save it there and then use the makeglossaries command to recompile the .gls file.

Rebuilding the glossary

To **Recompile the .gls**. In the (main document)build folder:

- Launch command prompt
- enter command: **makeglossaries GISDocumentation***

Note that this command reads the .aux file and creates the .gls file. The .aux file is created by compiling with PDFLatex. If there is no .aux file the command will fail

Using glossary terms in a subdocument:

In the subdocument you must add code to input the glossaryEntries file.
ie. After the line:

```
\input{.../.../.../preamble}
```

Add the line:

```
\input{.../.../.../glossaryEntries}
```

To use a glossary term in the subdocument:

In place of the term, use code referencing the key (in the glossaryEntries file):

- \gls{key}

To add the glossary to the subdocument:

- Add the line \makeglossaries to the preamble of the subdocument.
- Add the line \printglossaries to the subdocument.
- Run makeglossaries in command line on the subdocument similar to how is described above.

U S I N G T H E B I B L I O G R A P H Y (R E F E R E N C E S)

Bibliography requirements

Compiling the bibliography requires running bibtex either in a \LaTeX IDE or in command line as described here. PDFLatex must be run first to create a .aux file that is used by bibtex to create a .bbl file. After the .bbl file is created, PDFLatex must be run again to insert the bibliography at the \bibliography location.

Inserting the bibliography

In the \LaTeX code:

```
\bibliography\{referenceEntries}
```

Inserts a bibliography called referenceEntries.bib from the same folder as the project .aux file

Creating a new bibliography entry

To **create a new bibliography entry**: Add an entry to referenceEntries.bib. Save it there and then use bibtex to recompile the .bbl file.

Rebuilding the bibliography

To **Recompile the .bbl**. In the (main document)build folder:

- Launch command prompt
- Enter command: **bibtex GISDocumentation**

Note that this command reads the .aux file and creates the .bbl file. The .aux file is created by compiling with PDFLatex. If there is no .aux file the command will fail

To cite a bibliography source in a subdocument

In the place that you want the citation In the \LaTeX code:

```
~\cite[pg.#]{key}
```

U S I N G T H E I N D E X

Index requirements:

Compiling the index requires running the makeindex command either in a \LaTeX IDE or in command line as described here. PDFLatex must be run first to create a .aux file that is used by makeindex to create an .idx file. After the .idx file is created, PDFLatex must be run again to insert the index at the \printindex location.

Creating a new index entry

To **create a new index entry**: Add an entry to indexEntries.tex. Save it there and then use the makeindex command to recompile the .idx file.

Rebuilding the index

To Recompile the .idx In the (main document)build folder:

- Launch command prompt
- enter command: **makeindex GISDocumentation***

Note that this command reads the .aux file and creates the .idx file. The .aux file is created by compiling with PDFLatex. If there is no .aux file the command will fail. Run PDFLatex first

Access the index from a subdocument

In the subdocument you must add code to input the indexEntries file. For example:

After the line:

```
\input{../../../../../preamble}
```

Add the line:

```
\input{../../../../../indexEntries}
```

To use a index term in the subdocument:

In place of the term, use code referencing the key (in the indexEntries file):

- \index {key}
-

To add the index to the subdocument:

- Add the line \makeindex to the preamble of the subdocument.
- Add the line \printindex to the subdocument.
- Run makeindex in command line on the subdocument similar to how is described above.

Part III

Service

— 5 — Applications

5.1 FOR TREASURER DEPARTMENT

5.1.1 FORFEITURE DATA COLLECTION

PROBLEM AND ANALYSIS

Background

Treasurer department has an annual responsibility to properly document the tax forfeiture process. The LIS Department built an application in MS Access and MapInfo that consumed a daily export from BSA and was deployed to the field on a laptop. A digital camera was used for site photos and later imported into the laptop.

Statement of Problem

The current Tax Forfeiture workflow is built on MapInfo software and MS Access and executed on a laptop pc. Both MapInfo and MS Access are no longer supported in county workflows. ESRI software can be used to rebuild the workflow. *Forfeiture Data Collector Application, (Forfeiture App)* must be recreated in the ESRI framework.

Analysis

Forfeiture App will facilitate: *Mobile data collection on a handheld device,:* (**Mobile Interface**) and an *in office workflow to complete data processing,* (**Pre and PostProcessing**)

Mobile Interface

- Synchronize with data in the office (online)
- Collect data and photos of forfeiture sites (offline)
- Synchronize the collected data with data in the office (online)

Pre & Post Processing

- Produce and print a form for each site visited with required data and images

Synchronize the Forfeiture Field Map

Note the date and time

Note the date and time

Map is synchronized A red arrow pointing to the right, indicating a successful operation.

Field Data Collection

Data Entry Details

Attributes are of four entry types:

- Prefilled (in preprocessing)
- Autofill
- Dropdown
- Text box

Mobile Device Summary

For each site visited,

- Select the desired parcel
- Push **Edit**
- Collect attributes or photos

5.2 FOR EQUALIZATION DEPARTMENT

5.2.1 TAX MAP PRODUCTION

PROBLEM AND ANALYSIS

Background

Equalization department (EQ) has an annual responsibility to produce a printed version of maps that show all of the tax parcels in the county for every tax year. The GIS Services Department(GIS) has traditionally provided this as a service to Equalization.

Analysis

Tax Map Production Workflow will facilitate: Creation of new tax maps for each new tax year.

People Involved in the Workflow

- GIS Analyst
- EQ Mapper

Statement of Problem

Annually, after March Board of Review, a tool is needed to create updated parcel maps for printing by Equalization and the local units.

Stages of the Workflow

- Data Updates
- Map Production Testing
- Map Style Refinement
- Map Production

Tax Map Production Summary

The Four Stages of the workflow:

1. Data Updates Tax Roll Rollover:

- Update ACParcelsPublishing FDS from ACParcelsEditing FDS
- Prepare ACParcelsEditing FDS for the next year of use
- Add or delete quarter section index frames

2. Map Production Testing:

- Execute Tax Map Builder ArcPy Script on test units
- QA QC to verify updates

3. Map Refinement

- Symbols
- Labels
- Layer Order

4. Map Production:

- Execute Tax Map Builder ArcPy Script on all units
 - QA QC results
-

Technologies Used in The Tax Map Workflow

ArcGIS Enterprise

SQL Server Source Data:

- ACPo.SDE

ArcGIS Desktop

ArcPy tools produce map pages using Data Driven Pages (DDP) functionality

Production Data

- ACCadastral.gdb (File GDB Created From ACPo.SDE)

Python

A Python interpreter to tune the TaxMap-Tool.py script

Adobe Acrobat

Combine pdf pages into books by unit

DATA UPDATE PROCEDURE

Updates to AC_Pro.sde

Datasets involved:

- ParcelEditing
- ParcelPublishing
- TaxMapIndexFrames
- TaxMapLayers
- TaxMapUnitBounds

Update Procedure

Parcel Editing and Parcel Publishing

Annually, the ParcelEditing feature dataset (FDS) is used to update the ParcelPublishing FDS. For each FC in ParcelPublishing:

- Delete all features
- Load all features from corresponding FCs

Data Update Relation	
FC in ParcelEditing	FC in ParcelPublishing
AC_COGO_LnEdits	AC_COGO_Ln
AC_DimensionsEdits	AC_Dimensions
AC_PointsEdits	AC_Points
AC_Splits	AC_Parcels
AC_SubBlocksEdits	AC_SubBlocks
AC_SubdivisionsEdits	AC_Subdivisions
AC_SublotsEdits	AC_Sublots
AC_TiebarsEdits	AC_Tiebars

TaxMapIndexFrames

As this is the index layer for the DDP, Quarter Quarter Section frames must be added or removed to account for added or removed subdivision features.

TaxMapLayers

Layers that are derived from other fcs for cartography purposes

- AC_M_Rd_Lbl is a subset of AC_Roads used only for less busy labeling
- AC_MapID_RR is a subset of AC_Parcels used only for Railroad Labeling
- AC_Road_ROWS_Tax is an aggregation of AC_Road_ROWS by unit

TaxMapUnitBounds

Layers extracted from AC_Units for bounding polygons in the locator Data Frame

Workspace Folder Setup

Inside of J: \Rightarrow Apps \Rightarrow Python \Rightarrow TaxMaps:

Copy the folder: **TaxMapsWorkspaceTemplate**

Into the years folder and rename to: YYYY

Production Data Creation

In the source folder, create a new file GDB named AC_Cadastral. Import the following FDSs from AC_Pro.sde:

- AdministrativeArea
 - CadastralReference
 - Hydrology
 - ParcelPublishing
 - Roads
 - TaxMapIndexFrames
 - TaxMapLayers
 - TaxMapUnitBounds

Map Production Setup

In the new workspace folder:

ArcGIS Desktop

Use ArcMap Catalog to navigate to:

workspace folder \Rightarrow processing \Rightarrow Toolbox \Rightarrow TaxMapTools.tbx

Double click on the **TaxMapBuilder** script

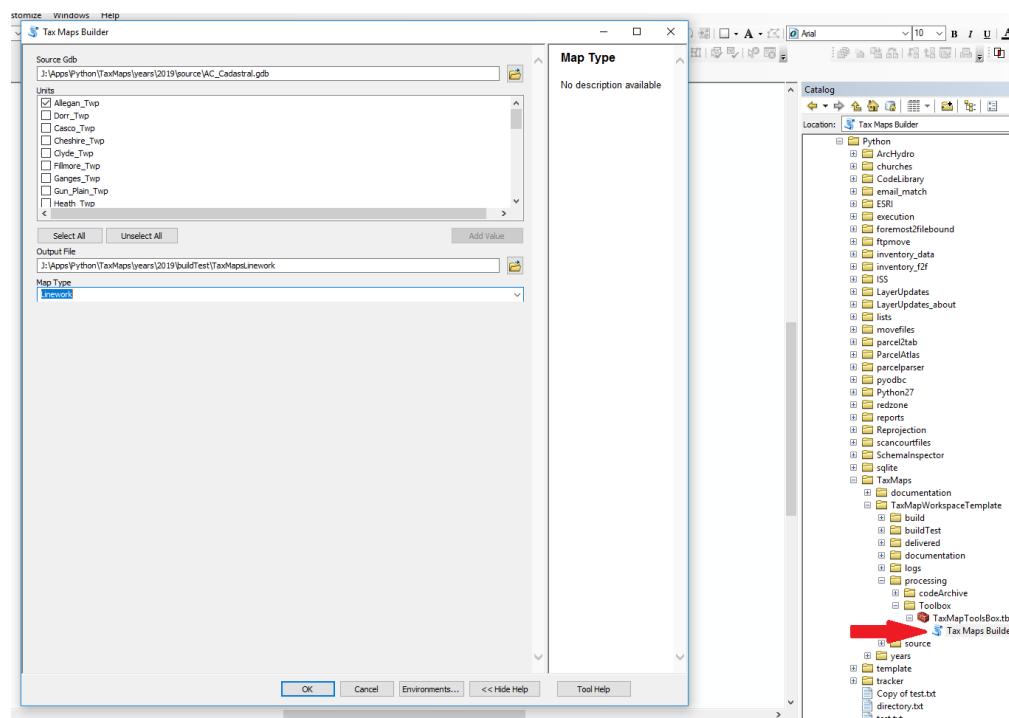

Figure 5.3: Tax Map Builder UI

To execute the tool:

Make selections in the tool from the appropriate locations in the workspace folder.

Map Refinement

Test groups of maps should be produced.

Any style improvements that can be made should be done at this time.

Map Production

Use ArcMap Catalog to navigate to:

workspace folder → processing → Toolbox → TaxMapTools.tbx

Double click on the **TaxMapBuilder** script

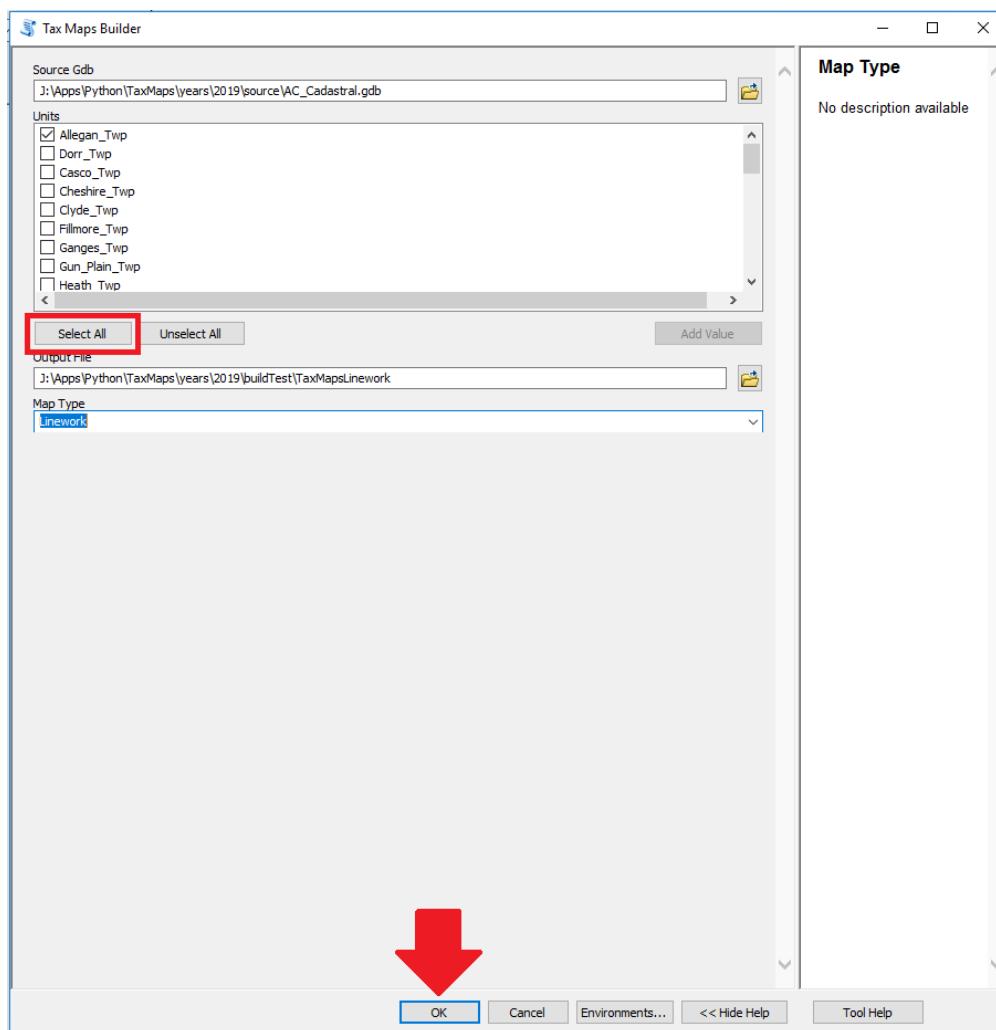

Figure 5.4: Tax Map Builder UI

Select All Units and Press OK

Create Books from Pages

For each unit, organize the pages into the TaxMapUnitFolders.

Move the pages to the appropriate pdf folders inside the delivered folder of the workspace.

Combine all of the individual map pages into books using Adobe Acrobat and save to the PDF_Book folder.

Share the map books with Equalization

Copy the entire TaxMapUnitsFolder to:

J:  Departments  Equalization  TaxMaps  TaxMap Archive

6.1 BSA SUPPORT

6.1.1 ADDING A LAYER TO THE BSA GIS

TOOL SUMMARY

Background

B S And A features a GIS toolset that requires data layers to be added to map documents for visualization.

B S AND A is used within Equalization and by local assessors throughout the county.

Why the Tool is Needed

B S And A Users often ask ACGIS for data and assistance in using the data.

Who the Tool is For

User knowledge of B S And A.

B S And A installed.

GIS data source files on the local machine.

Takeaway

With the necessary data files, any B S And A user can add layers to a map within B S And A GIS

A D D A N I M A G E R Y L A Y E R

Step 1: Edit GIS Settings

In **Program Setup** ⇒ Select **GIS Settings...**

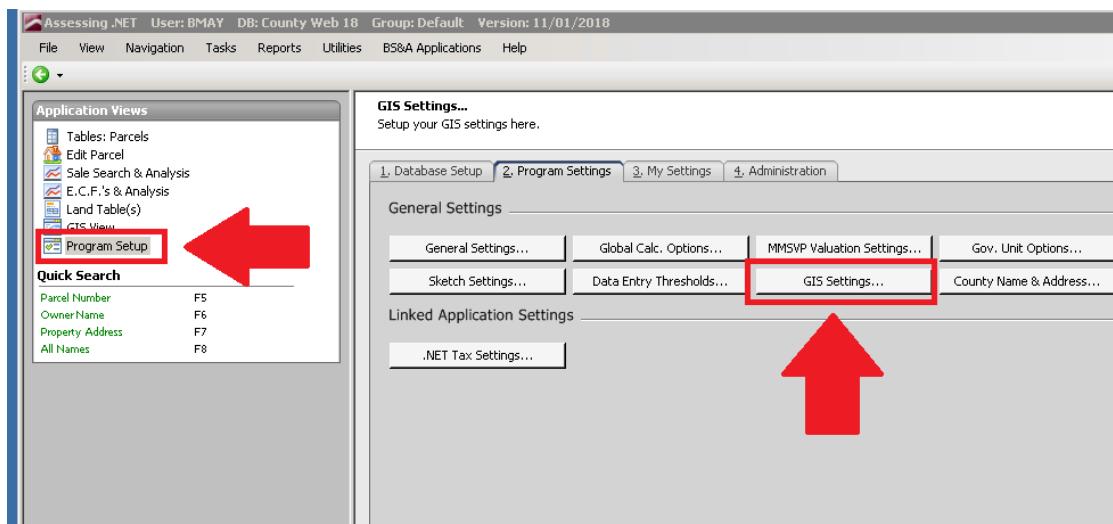

Figure 6.1: BSA Program Setup

Step 2: Select Map To Edit

In **GIS Settings** ⇒ **Map Collections** ⇒

Double click on the map that you want to add a layer to

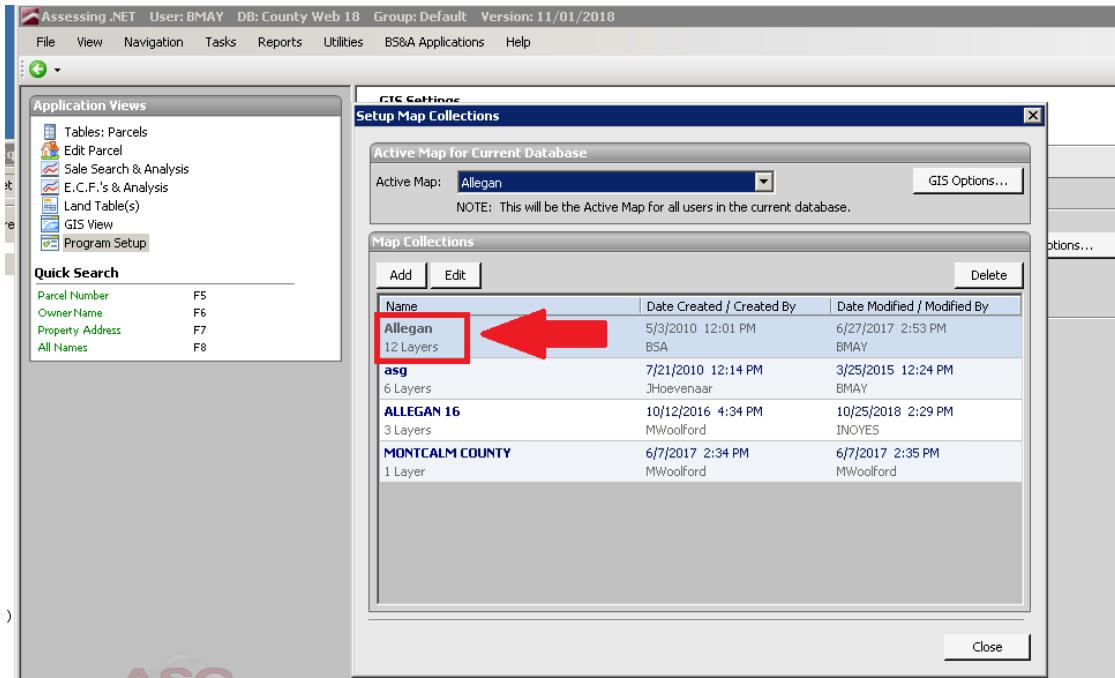

Figure 6.2: GIS Setup

Step 3: Add Layer

Setup Layers ⇒ **Add**

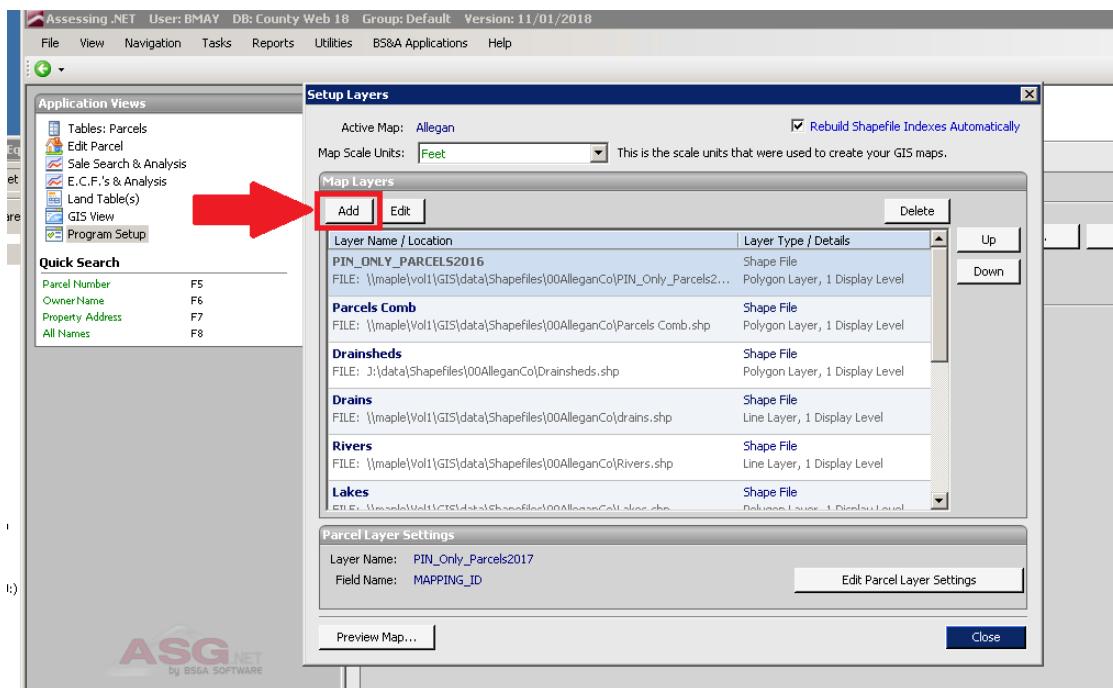

Figure 6.3: Layers Setup

Step 4: Select Layer Type

Setup Layers ⇒ **Image** ⇒ **OK**

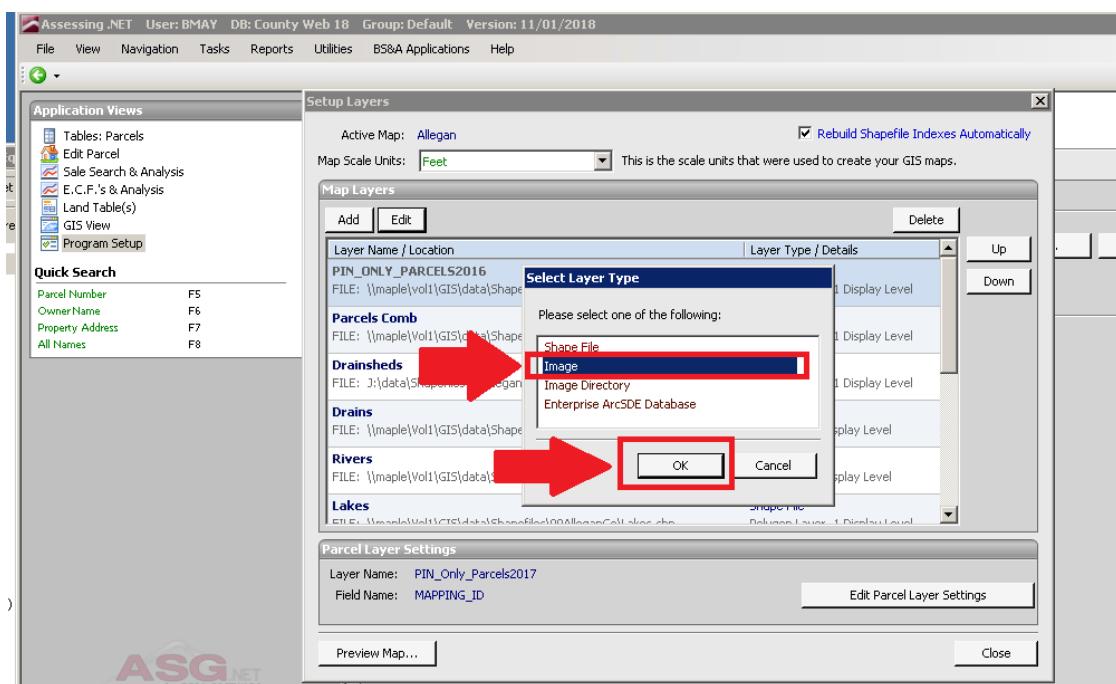

Figure 6.4: Select Layer Type

Step 5: Add Layer From Local Drive

Navigate to Image File ⇒ **Open**

*image files are often file type .sid

*layer files are often file type .shp

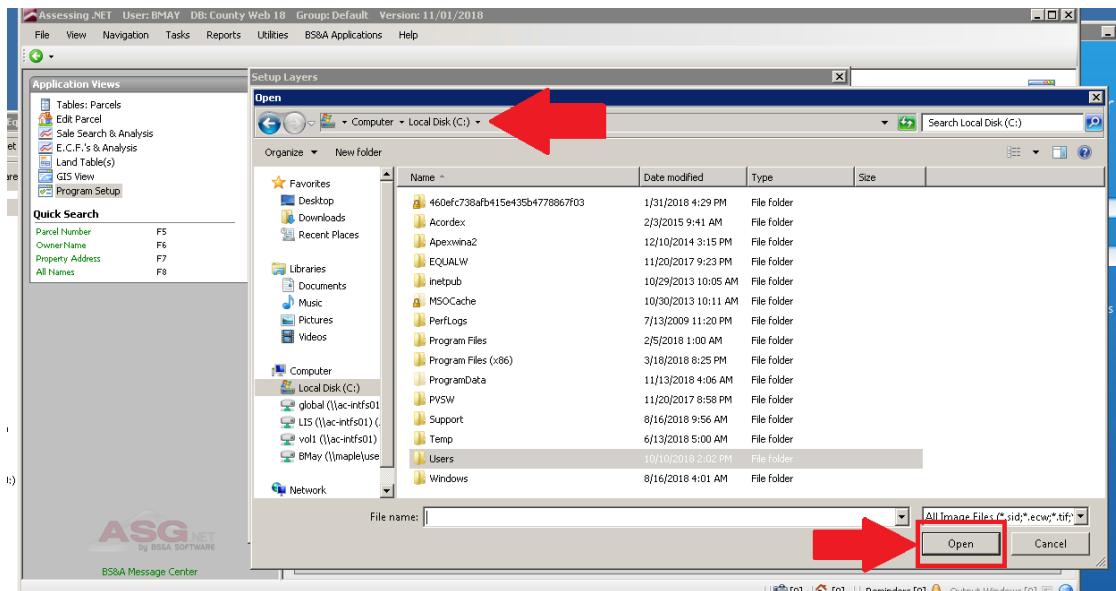

Figure 6.5: Add Layer From Drive

The new image should now be in the map

6.2 CORE DATA

6.2.1 GIS DATA MAINTENANCE

TOOL SUMMARY

Background

Allegan County GIS Services works with various stakeholders to maintain authoritative data. Often mapping requests involve data maintenance and sometime require data schema alterations.

Why is the Tool Needed

Though the variety of GIS data input and maps output required of the different stakeholders varies and is extensive, general workflow details can be synchronized. It is important that this workflow be platform in-

dependent and therefore may be described in somewhat general terms.

Who is the Tool For

Allegan County GIS Services staff.

Takeaways

This general workflow can be used to maintain authoritative data and fulfill mapping requests efficiently. This documentation will assist in evaluating and executing mapping requests that involve any core data edits.

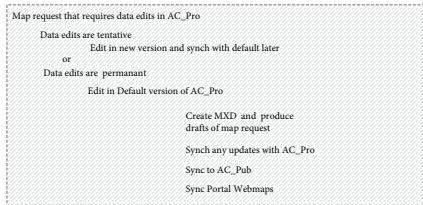

Figure 6.6: Workflow Summary

O V E R V I E W

Inputs

- Map request requiring edits in ACPro

Outputs

- Maps
- Updates to ACPro
- Updates to ACPub
- Updates to Portal Maps

P R O B L E M A N D A N A L Y S I S

Background

Allegan County GIS Services builds and maintains the geographic dataset used in workflows in and out of county government.

Statement of Problem

Geographic data must be both maintained and shared. Data is maintained

by Equalization and GIS Services. Data is shared with EH, EQ, Dispatch and the public.

Analysis

Here is where analysis of this problem goes

TO STOP ARCGIS SERVER

Launch ArcGIS Server Manager

Site ⇒ GIS Server ⇒ Machines ⇒ Stop the Server

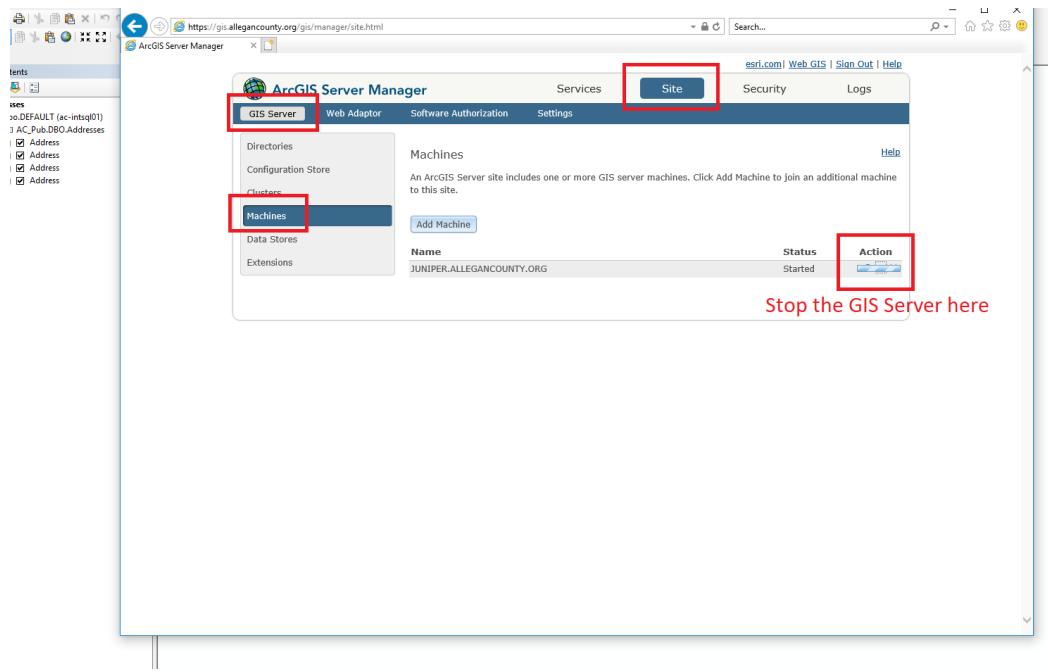

Figure 6.34: Stop the GIS Server

F I X I N G D A M A G E D S E R V I C E S

Error:

Service is currently being configured by another administrative operation

Remedy:

This tech support article applies:

<https://support.esri.com/en/technical-article/000015549>

There are at least 2 ways to fix:

- Use the ArcGIS Server Account Utility
- Remove Lock Files

Use the ArcGIS Server Account Utility

Access the GIS Server

To Log in to Juniper

windows R ⇒ mstsc

⇒ juniper

Use personal network credentials

On the GIS Server (Juniper)

In Windows Search, find:

Configure ArcGIS Server Account
Utility

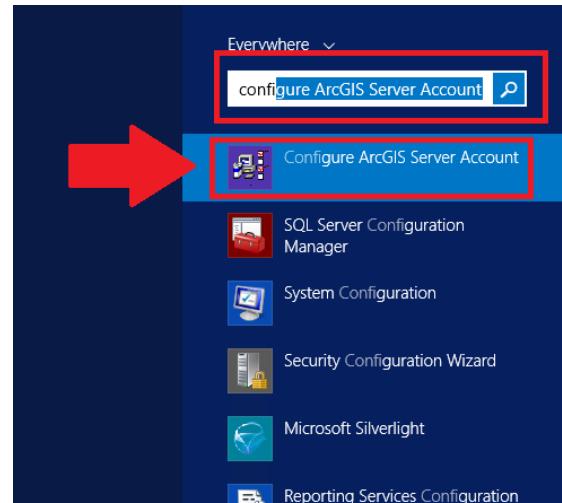

Figure 6.35: ArcGIS Server Account Utility

Use credentials:

PW: @lleganGxxxxxx

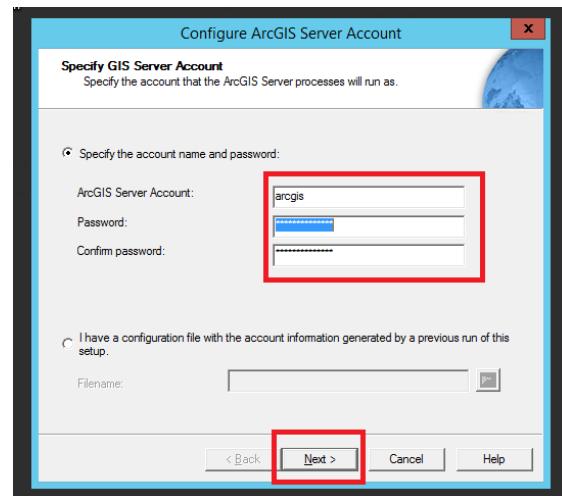

Figure 6.36: Account Utility Login

In the utility, paste these paths:

C:\arcgisserver\directories
C:\arcgisserver\config-store
C:\arcgisserver\logs

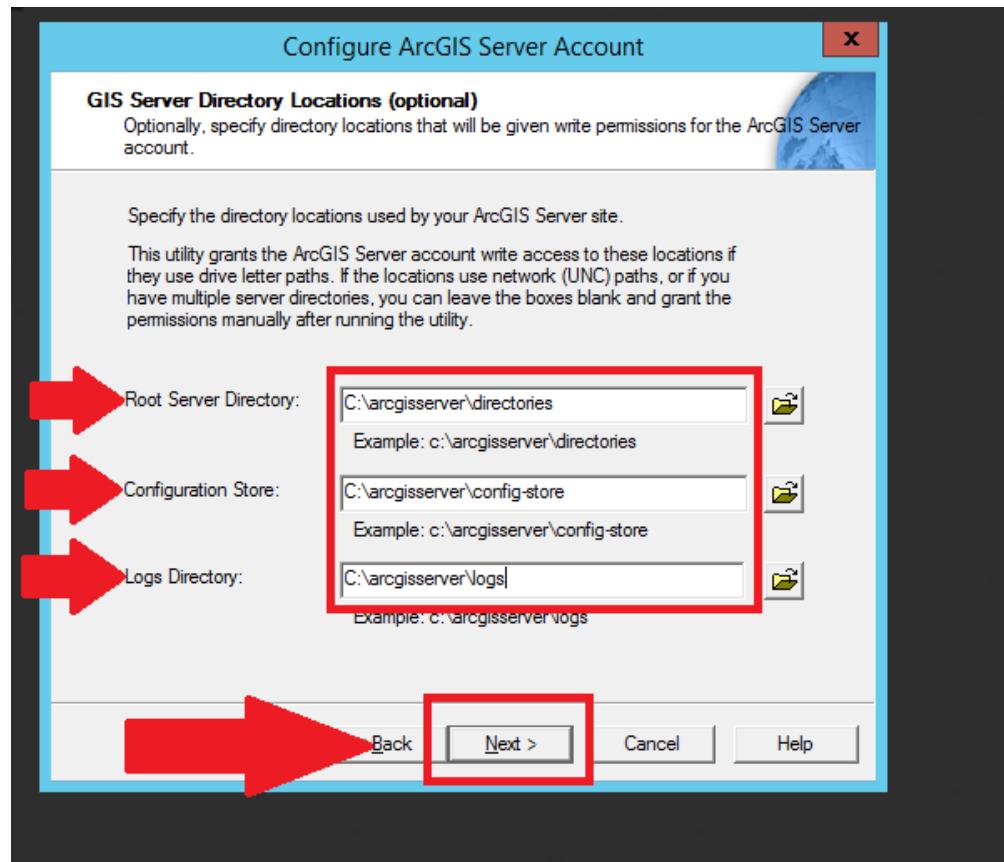

Figure 6.37: GIS Directory Locations Filled

Push **Next**

Select option **Do not export Configuration File**

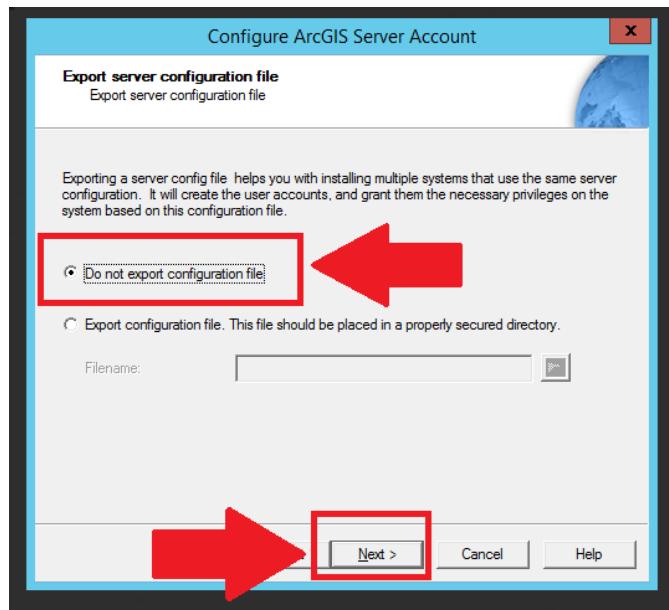

Figure 6.38: Do not Export Config File

Push **Next**

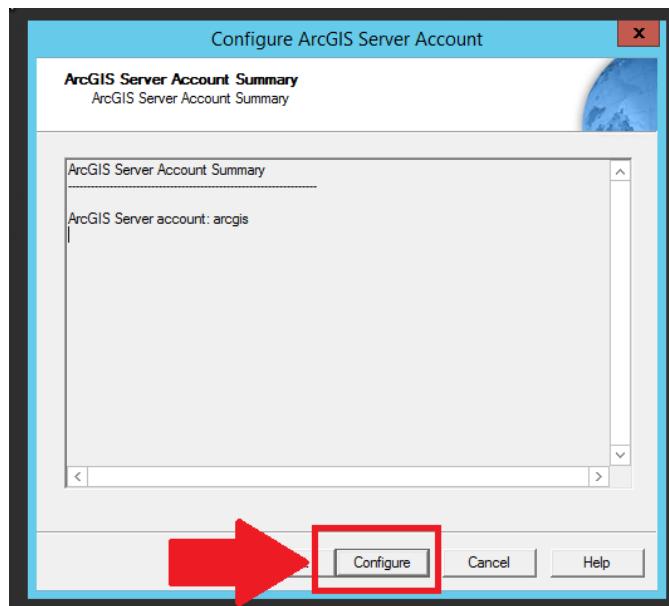

Figure 6.39: Configure Account

Push **Configure**

While the tool runs, open the service manager

In Windows Search, find: **Service Manger**

Launch **Service Manger** When the tool completes,

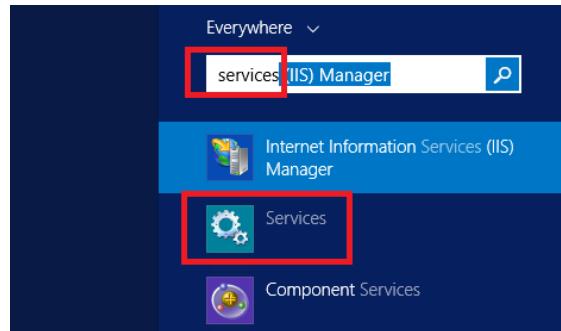

Figure 6.40: Search For Service Manager

Push **Finish**

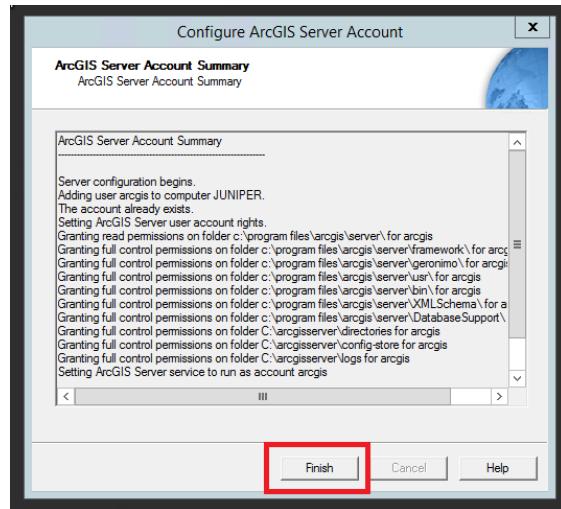

Figure 6.41: Finish On Configure

Services Manager

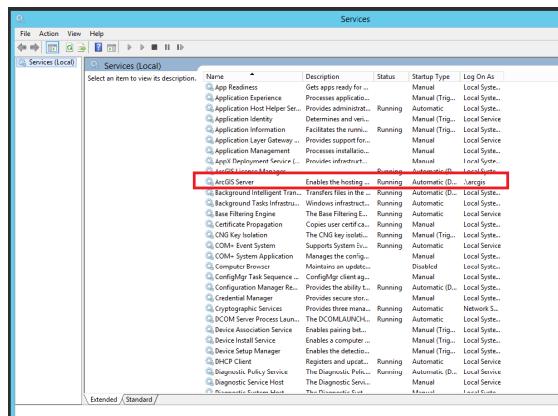

Figure 6.42: Open Services Manager

In services, select the ArcGIS Server service and restart the service. (Randy had to do this)

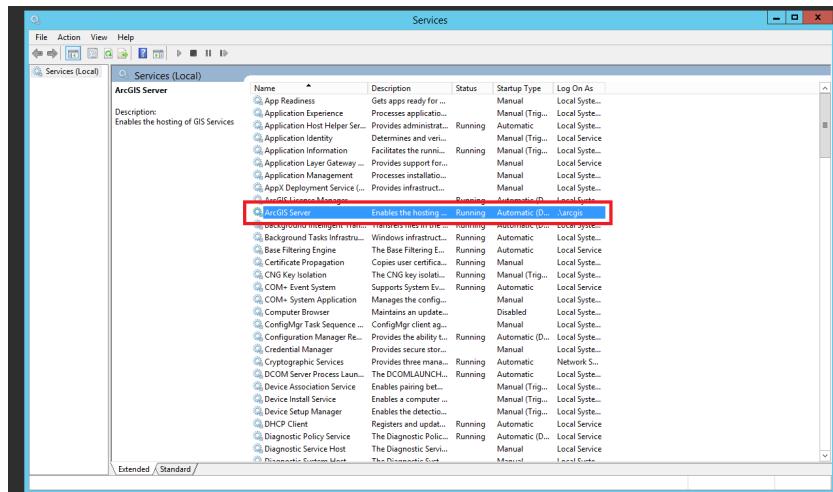

Figure 6.43: arcGis Service In Services Manager

Quick and dirty fix

When a service get hung up in som admin process, you may get an error like:

Error:

Service is currently being configured by another administrative operation

Removing Lock Files

This may work, here is a blog about it

<https://community.esri.com/thread/103710> Network location for an example service

```
on juniper
C:\arcgisserver\config-store\services\ParcelViewer2\
PV2Adresses.MapServer\startup\JUNIPER.ALLEGANCOUNTY.ORG
```

Suggested Steps:

- 1) stop arcgis server services.
- 2) delete the lock files (*.glock and *.rlock)
(in arcgisserver\config-store).
- 3) restart arcgis server service.
- 4) stop the pending stopping service and then start it.

mapservices would not stop so I try this:

<https://support.esri.com/en/technical-article/000012685>

Check permission levels for the arcGIS account ArcGisServerPermissions.PNG

If necessary, add the arcgis user to the permissions on the folders ArcGisServer-PermissionsAddUser.PNG

6.5.6 MANAGING GEODATABASE REPLICAS

ADDING A NEW FEATURE CLASS TO A REPLICATOR

Source: <https://support.esri.com/en/technical-article/000010345>

Summary

Currently, there is no out-of-the-box tool to add a feature class to an existing replica. With ArcGIS Desktop, one must either recreate the replica or if the workflow allows, replicate the new feature class as a separate replica.

Steps:

The steps below outline how to recreate the replica using the Register Existing Data option in Desktop. These steps can be applied to both one-way and two-way replicas.

- Synchronize the changes between parent and child replica geodatabases using the existing replica so that the data is identical in each database, then Unregister the replica in both geodatabases. For two-way replicas, ensure that changes are synchronized in both directions and there are no outstanding edits before unregistering the replica.
- Create or import the new feature class into the parent geodatabase, and add the GlobalID.
- Register the newly added data as versioned.
- Copy and paste the new feature class to the child geodatabase using ArcCatalog.
- Note: that the GlobalIDs must have already been added to the feature class.
- For two-way replica or one-way full model, register the newly added data in child geodatabase as versioned.
- Using the parent geodatabase, add all the data that is to be replicated to a map in ArcMap.
- Click the 'Create Replica' tool on the Distributed Geodatabase toolbar.
- Select 'One way replica' or 'Two way replica' and click Next.
- Select 'Register existing data only'.
- Select the child geodatabase and specify a replica name.

- Click Next and click Finish.
- A new replica is created that includes the new data.

6.5.7 MANAGING GEODATABASE VERSIONS

VERSION QUERIES

SQL Queries

Four queries of SDEversions, SDEstates, sdestatelineages, and SDEcompresslog

```
use AC_Pub
select name, owner, version_id, state_id, parent_name
, parent_owner from
[AC_Pub].[dbo].[SDE_versions]
select * from [AC_Pub].[dbo].[SDE_states] order by state_id
select * from [AC_Pub].[dbo].[sde_state_lineages] order
by lineage_name,
lineage_id
select TOP(5) * from [AC_Pub].[dbo].[SDE_compress_log] order by
compress_end DESC
```

Query of SDEversions and SDEstates

```
use AC_Pub
SELECT v.version_id,v.creation_time,v.creation_time,
s.state_id, s.creation_time
FROM SDE_versions v
INNER JOIN SDE_states s ON v.state_id = s.state_id
```

FINDING ORPHANED VERSIONS

Remove orphaned versions

Follow the procedure: [Link to source](#)

Use SQL Server Management Studio to execute two queries and compare the results.

Step 1:

Execute the query:

```
use AC_Pub
SELECT ObjectID, name from dbo.GDB_ITEMS where
TYPE='4ED4A58E-621F-4043-95ED-850FBA45FCBC';
```

Step 2:

Execute the query:

```
use AC_Pub
SELECT name from [dbo].[SDE_versions]
order by name
```

Compare the tables

This graphic summarizes elements of the queries. Note the items from step two

```

use AC_Pub
SELECT ObjectId, name from dbo.GDB_ITEMS where TYPE='4ED4A58E-621F-4043-95ED-850FBA45FCBC';

```

code for versions
in gdbItems

ObjectId	name
1	16497 ProtoPubParcelPubReplica
2	16520 ProtoPubLandUsePlanningReplica
3	17074 SchoolsReplica

that have no match in step one.

Orphaned versions can be removed by name in ArcGIS

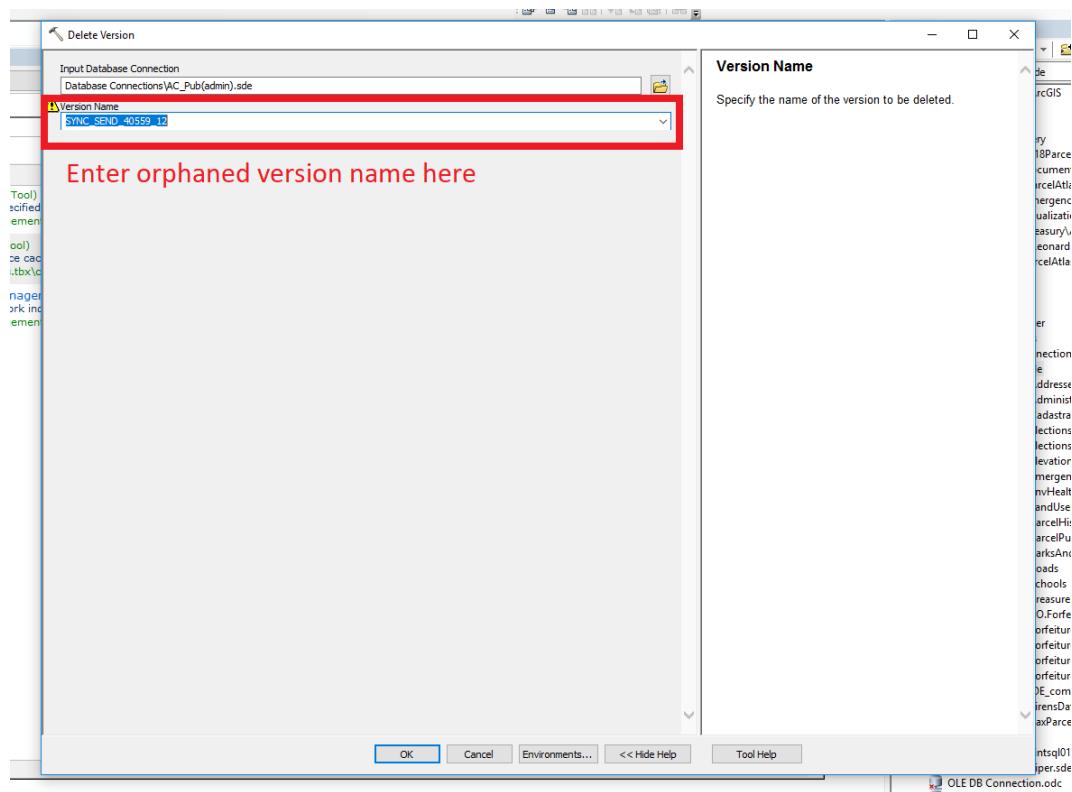

Figure 6.45: Delete Orphan Versions

6.5.8 MXD MANAGEMENT

FIND / REPLACE TEXT OBJECT

Python Code

Python Code for finding and replacing a text object in a ArcGIS .mxd file. A snippet of this code may be found in the LayerUpdates/Zoning/processing folder. It is used to edit the .mxd files located there.

```
import arcpy
from arcpy import env

env.workspace = r"J:\Apps\Python\LayerUpdates\zoning\processing"
for mxdname in arcpy.ListFiles("*.mxd"):
    print mxdname
    mxd = arcpy.mapping.MapDocument(r"J:\Apps\Python\
        LayerUpdates\zoning\processing\" + mxdname)
    for elm in arcpy.mapping.ListLayoutElements
        (mxd, "TEXT_ELEMENT"):
        if elm.text.startswith('As ammended'):
            elm.text = elm.text.replace('As ammended',
                'As amended')
            print elm.text
    mxd.save()
del mxd
```

6.6 LATEX PACKAGES USED BY AGGIS

6.6.1 COMMON ERRORS

Source:

<https://www.ocf.berkeley.edu/~latex/files/commonerrors.tex>

If you have every compiled a \LaTeX document, chances are high you have received a few error messages. Sometimes they come from something as stupid and as easy to fix as forgetting a parenthesis or forgetting to end an environment. There are also a lot more cases where you have no idea what you have done wrong and it takes you a long time to find or even understand your error.

The purpose of this is to explain some of the common errors that may happen when compiling a \LaTeX document and suggestions for what is probably going on and how to debug your document.

THE FORM OF AN ERROR

There are two forms of errors: \LaTeX errors and \TeX errors. In both types of errors, the part after the error message will tell you where the error occurred. An example:

1.15 <offending text>

The 1.15 tells you what line the error occurred on and the text will tell you the text that caused the error.

LATEX ERRORS

The general form of an error in \LaTeX is shown below:

! LaTeX error: <error message>

See the \LaTeX manual or \LaTeX Companion for explanation.

Type H <return> for immediate help.

...

The ! lets you know that the error has occurred. The error message will tell you what type of error you have committed. After the ellipses, you will find the line at which the error occurred and the text that caused the error (or at least the text where \LaTeX found the error).

TEX ERRORS

Errors may also have the following form:

```
! <error message>
```

These errors are formatted differently because they are error messages that came from \TeX instead of \LaTeX . After the error, you will still find the line that the error occurred in and the text of the error.

WARNINGS

There are some error messages that are just warnings and will not stop or change the compilation of the document. Chances are you have seen them many times.

UNDERFULL

The following error results when a line does not extend the width of the page, something \LaTeX always tries to accomplish:

```
Underfull \hbox (badness 10000) in paragraph at lines  
104--107
```

This error message is just a warning and is not something to worry about. For the most part, when a line does not span the width of the page, it is because you have written something that you want to only cover part of the page.

OVERFULL

The following error results when a line extends beyond the width of the page:

```
Overfull \hbox (16.04988pt too wide) in paragraph at  
lines 30--31 [] [] \OT1/cmtt/m/n/12 I'm trying to put  
way too much text into a line in my document.
```

Usually this error comes from when you are using the `verbatim` package because it will not move to the next line if your text does not go to the next line. The easiest way to fix this is to find the place in your document where this is occurring and change the text so that it fits to the page.

This error will still show up if the text is still on the page but outside of the width of text that \LaTeX has set. In this case, you are welcome to fix things so that the error does not show up or you can leave the text as it is.

R E F E R E N C E S

The following warnings occur when references are changed when \LaTeX was compiled:

`LaTeX Warning: Label(s) may have changed. Rerun to get cross-references right.`

`LaTeX Warning: There were undefined references.`

`LaTeX Warning: Reference ‘name’ on page 1 undefined on input line 15.`

The way to fix these errors is to recompile the document again to correct the page numbers. Sometimes it is necessary to recompile the document twice to fix this error. You also may have defined a reference wrong, so you should check to make sure your label is correct.

B E G I N N I N G A N D E N D I N G

B E G I N E N D E D B Y E N D

This type of error occurs when each environment is not correctly started and ended. When you are missing an `\end` command, the following error will show up:

`! LaTeX Error: \begin{enumerate} on input line 23
ended by \end{document}.`

To fix this, you need to end the environment mentioned in the error with the appropriate command.

When you are missing a \begin command, the following will appear:

```
! LaTeX Error: \begin{document} ended by  
\end{itemize}.
```

To fix this, you basically do the same thing as before, correctly beginning the environment mentioned in the error with the appropriate command.

END OCCURRED INSIDE A GROUP

The following error message will show up at the end of compiling a file if an environment is begun that is not ended:

```
(\end occurred inside a group at level <n>)
```

To fix this error, make sure you end the environment that was begun. The previous error is more helpful in finding the \begin statement.

ENDED BY END OF LINE

The following error will occur when you try to place a command inside a section heading:

```
! LaTeX Error: \verb ended by end of line.
```

See the LaTeX manual or LaTeX Companion for explanation.

Type H <return> for immediate help.

...

There will be many errors of the same type for this mistake. In order to find where you put the command, look in the output file and find the last heading that shows up.

M I S S I N G B E G I N D O C U M E N T

This error is self-explanatory:

```
! LaTeX Error: Missing \begin{document}
```

E R R O R S U S U A L L Y C A U S E D B Y B A D S P E L L I N G

U N K N O W N C O N T R O L S E Q U E N C E

This error results when you use a command (something that starts with a \) that is not recognized by \LaTeX :

```
! Undefined control sequence.
```

Usually this error results from spelling a command incorrectly. Go to the line that is indicated by the error and fix the command.

E N V I R O N M E N T U N D E F I N E D

This error results when you begin an environment with a \begin command that is not recognized:

```
! LaTeX Error: Environment verbatim undefined.
```

Usually you have just spelled your environment incorrectly, so you just need to fix it.

B A D F I L E N A M E

This error results when you have mistyped the command `latex` or do not have \LaTeX installed on your computer:

```
Bad command or file name
```

To fix this, correctly spell the command to compile your file or make sure that \LaTeX is correctly installed on your computer.

C A N N O T F I N D F I L E N A M E

This error occurs when you try to compile a file that the computer cannot find:

```
! I can't find file 'sample'.
<*> sample
```

Please type another input file name:

To fix this error, make sure you have spelled the file name correctly. You also may be in the wrong directory to compile the file, so check to make sure you are in the same directory as your file.

F A T A L E R R O R S

R U N A W A Y A R G U M E N T

This error happens when a paragraph ends before a command's argument is done (i.e., \LaTeX thinks that there is a missing $\}$):

Runaway argument?

To fix this, you should use a different command to accomplish what you are trying to do. An example of this is to use \bfseries instead of \bfseries to make bold text in more than one paragraph.

This error can also be caused by a missing mandatory argument to a command.

J U S T A N *

This error normally occurs when you do not end your document with $\end{document}$:

*

If you are prompted to enter something in, it is best to enter $\end{document}$

and hope it works. Be sure to end your document with the appropriate command.

E M E R G E N C Y S T O P

This error happens when \LaTeX will stop trying to compile your document due to a serious error:

! Emergency stop.

To fix this error, you will need to figure out what caused it to stop compiling. Chance are you forgot to end your document with `\end{document}`, but there might also be another reason for the emergency stop.

P L E A S E T Y P E A C O M M A N D O R S A Y E N D

This error happens when your file has ended prematurely:

(Please type a command or say ‘`\end`’)

The best way to deal with this type of error is to type

`\end`

or

`\end{document}`

in the case that the absence of that command caused the error. Usually if you have ended your document correctly, the error will result from a missing } or forgetting to end a verbatim environment.

G R A P H I C S E R R O R S

T O O M A N Y U N P R O C E S S E D F L O A T S

This error occurs when figures or tables (i.e., floats) have not been typeset:

! LaTeX Error: Too many unprocessed floats.

\LaTeX can only have so many floats waiting to be typeset. In order to fix this error, make sure that you are placing your floats where you want them (with a [h] option) and not wanting too many on one page in sequence. Using the command `\clearpage` can be very useful in distributing floats correctly.

UNKNOWN GRAPHICS EXTENSION

The following error occurs when you try to use a type of graphic that is not supported by the type of file that you are producing:

```
! LaTeX Error: Unknown graphics extension: .gif
```

In order to fix this error, you should change your graphics to the types that are supported by the type of file you are outputting or you will need to include the correct package to deal with that type of graphic. Sometimes you may have named the graphic poorly so that \LaTeX will not recognize it as a graphic file.

DIVISION BY ZERO

The following error occurs when the height of a graphic object is zero:

```
! Package graphics Error: Division by 0.
```

This is usually caused when you rotate an object with zero depth so that its height becomes zero. The best way to fix this is to use the keyword `totalheight` instead of `height`.

MATH ERRORS

DISPLAY MATH SHOULD END WITH \$\$

This error occurs when the `displaymath` or `equation` mode is ended incorrectly:

```
! Display math should end with $$
```

To fix this error, make sure that you end the `displaymath` or `equation` mode correctly (ending them with a `$` is not acceptable).

BAD MATH ENVIRONMENT

DELIMITER

This error occurs when you do not have your delimiters correct in math mode:

```
! LaTeX Error: Bad math environment delimiter.
```

Usually this occurs when you forget to match a right delimiter with every left delimiter. This error may also happen when you forget to end an array.

M I S S I N G R I G H T

This error occurs when you have a missing right parenthesis:

! Extra \right.

To fix this, you either need to add a \right command or you need to end an array.

M I S S I N G D E L I M I T E R

This error message occurs when a delimiter is missing:

! Missing delimiter (. inserted).

To fix this error, you need to make sure that you have a right delimiter for every left delimiter. If you do not want a right delimiter matching a left delimiter, you need to use “.” to not have an error message show up.

M I S S I N G \$ I N S E R T E D

The following error occurs when you try to use a character that can only be used in math mode, like _ or ^:

! Missing \$ inserted

To fix this error, make sure you change the character to what it should be in text mode.

T A B U L A R E N V I R O N M E N T E R R O R S

M I S P L A C E D A L I G N M E N T T A B

C H A R A C T E R &

This error occurs when you use & and when you are not in a tabular environment:

Misplaced alignment tab character &

To fix this error, you need to use \& to make a &.

E X T R A A L I G N M E N T T A B

This error occurs when you use too many tabs for the number of columns in a table:

```
! Extra alignment tab has been changed to \cr
```

The result of this error is that a new row is formed where the extra tab was. You should go back and fix your table so that the correct number of items in each row would show up.

A R G U M E N T H A S A N E X T R A }

These errors happen when an incorrect number of arguments to a tabular environment have been specified:

```
! Argument of \cline has an extra }.
```

```
! Argument of \multicolumn has an extra }.
```

To fix this error, make sure your arguments to the tabular environment are correct.

E R R O R S W I T H L I S T S

M I S S I N G I T E M

This error occurs when there is plain text in an environment that takes items:

```
! LaTeX Error: Something's wrong--perhaps a missing
\item.
```

To fix this error, make sure the plain text is changed into an item.

T O O D E E P L Y N E S T E D

This error occurs when there are too many lists for \LaTeX to handle:

! LaTeX Error: Too deeply nested

\LaTeX can only handle four levels of one type of list and six levels of different types of lists. To fix this, you need to use less levels of lists or define your own list environment.

M I S C E L L A N E O U S E R R O R S

O N L Y U S E D I N T H E P R E A M B L E

This error occurs when you place a command in the body of a \LaTeX document that should be placed in the preamble:

! LaTeX Error: Can be used only in the preamble.

To fix this error, just move the command to the preamble.

T H E R E I S N O L I N E / P A G E H E R E T O E N D

This error occurs when you incorrectly use the commands that make a new line or a new page:

! LaTeX Error: There's a no line here to end.

You may just leave the command that is making a new line in place or you can take it out. Here, \LaTeX is just trying to make sure that everything looks nice.

C O M M A N D A L R E A D Y D E F I N E D

This error occurs when you try to define a command that already exists:

! LaTeX Error: Command ... already defined.

To fix this, you need to define your command differently.

M I S S I N G N U M B E R

This error is made when a number is expected as an argument and one is not provided:

```
! Missing number, treated as zero.
```

To fix this error, you need to find where a number is expected so that you can provide the correct one.

Official hyperref package documentation

Notes:

- Add the *hyperref package* to the preamble **last** [2]

- To use Tex in a pdf bookmark: use

`\texorpdfstring{\\"}{}`

i.e. `\paragraph{Sample Text\texorpdfstring{\\"}{}}`

Creates a new line without an error.

`\usepackage[options]{hyperref}`

S I M P L E U S E

Use `\href{URL}{DESCRIPTION}` to add a link with description

`\href{https://www.latex-tutorial.com}{Website with tutorials}`
produces:

[Website with tutorials](https://www.latex-tutorial.com)

O P T I O N S

Add optional arguments to the `usepackage` line:

Useful options:

- **pdftex**
enables other options like breaklines
- **breaklinks**
allow links to be broken across several lines
eg. <https://lists.gnu.org/archive/html/emacs-orgmode/2013-06/msg00776.html>
- **colorlinks**
Colors the text of links and anchors.(default is false)
- **linkcolor**
Color for normal internal links(default is red).
- **anchorcolor**
Color for anchor text.
- **citecolor**
Color for bibliographic citations in text.
- **urlcolor**
Color for linked URLs

U S E W I T H O P T I O N S

```
\usepackage[breaklinks,colorlinks,citecolor=blue,
urlcolor=green]{hyperref}
```

C O M M A N D S

\href{URL}{text} Makes text a link to URL.

To put a file path in text:

eg:

[Official hyperref package documentation](#)

(documentation Pt.4 pg.15)

\href[options]{URL}{text}

Options:

➤ absolute

```
\href{C:/AC/jalapeno/documentation/packageDocs/hyperref2017.pdf}
    {Official hyperref doc}
```

➤ relative **Note: relative path must be from final pdf location**

```
\href{../../../../documentation/packageDocs/hyperref2017.pdf}
    {Official hyperref package doc}
```

This path works from main document

```
\href{../../../documentation/packageDocs/hyperref2017.pdf}
    {Official hyperref package documentation}
```

This path works from subsection document

\hyperref[label]{text}

Makes text a link to where \ref{label} would point.

\hypertarget{name}{text}

Sets an anchor on text with the label name.

\hyperlink{name}{text}

Makes text a link that takes you to the anchor labeled name.

Pair with \hypertarget.

\phantomsection

Used in conjunction with

\addcontentsline
to make the correct link in the Table of Contents.

6.8 PYTHON SCRIPTS USED BY AGGIS

6.8.1 FILE RENAME WITH PYTHON

PURPOSE AND SUMMARY

Purpose

Changing the file names within a directory

Summary

This script creates a list of all files in a source folder and then iterates through the list editing the file names, in this case, replacing spaces with no spaces.

REQUIREMENTS

Software

- python 2.7 and a Python IDE
- A text editor

Python(2.7)

This script was developed in python 2.7

The Python Script

```
#-----
# Name:      RenameFiles.py
#
# Purpose:   Renames any number of files within a directory
#
# Notes:     This script creates a list of all files in a source folder and
#            then iterates through the list editing the file names,
#            in this case, replacing spaces with no spaces.
#
# Author:    BMay
#
# Created:   20190620
```

```
# Updated: 20190621
#-----
#####
# Imports and Relative path folder setup
#####
import os, sys
project = os.path.dirname(os.path.dirname(__file__))
processing = os.path.join(project, 'processing')
build = os.path.join(project, 'build')

#####
# vars
#####
renameSrc = os.path.join(processing, 'RenameSource')

#####
# Main
#####
if __name__ == "__main__":
    os.chdir(renameSrc)
    for i in os.listdir(renameSrc):
        print i
        newName = i.replace(' ', '')
        print newName
        os.rename(i, newName)
```

6.8.2 PDF OPTIMIZER

PURPOSE AND SUMMARY

Purpose

Optimization of any number of pdf documents

Summary

A Python script creates a list of .pdf docs in a folder. The list is used to write a .txt document in which every line is a DOS command to optimize each of the .pdf documents and save them to another location. The .txt must be saved as a .bat. When executed the batch process calls ghost script for the optimization.

R E Q U I R E M E N T S

Software

- ghostscript
- python 2.7 and a Python IDE
- A text editor

About ghostscript

ghostscript is used for the optimization. ghostscript is an interpreter for the PostScript language and for PDF [1].

Licensing

ghostscript is available opensource under AGPL conditions. more information can be found [here](#).

Download

ghostscript can be downloladed [here](#).

note:

The output of this script is bdoc.txt, Save as a .bat to execute the optimize.

Python(2.7)

This script was developed in python 2.7

The Python Script

The output is a batch file

```
#-----
# Name:      OptimizePDF.py
#
# Purpose:    Batch optimize pdfs
#
# Notes:      This script creates a list of pdf files in a source folder and
#             then creates a .txt that can be used as a .bat file to optimize
#             all of the pdfs in the source folder to a new location.
# Author:     BMay
#
# Created:   06/20/2019
#-----
#####
# Imports and Relative path folder setup
#####

l = open(batchdoc,'w') # open .txt doc to write lines
for i in list1: # iterate list of files
    #newi = i[0:] # allows slicing on file name if chars need to be removed
    #print newi
    #t = inString1 + usString + newi + inString2 + i + "\n"
    t = inString1 + usString + i + inString2 + i + "\n" # assemble each string
    print t
    l.write(t) # write each string
l.close()
```

W I N D O W S B A T C H F I L E

A line from the batch file looks like:

```
gswin32 -sDEVICE=pdfwrite -dCompatibilityLevel=1.4 -dPDFSETTINGS=/ebook -dNOPAUSE
-dQUIET -dBATCH -sOutputFile=J:\Project\2018ParcelAtlas\build\optimized 02-
001-001-00.pdf J:\Projects\2018ParcelAtlas\build\2018071 \_02-001-00-00.pdf
```

To execute the batch file: change the extension of the scripts output from .txt to .bat. Double click the .bat to execute.

6.9 QGIS TOOLS

6.9.1 QGIS AZIMUTH AND DISTANCE PLUGIN

TOOL SUMMARY

The Azimuth and Distance Plugin can be added to QGIS to provide COGO functionality.

Background

QGIS is an opensource GIS that provides additional tools through Plugin architecture.

Why the Tool is Needed

QGIS does not have a COGO toolset built in.

Who the Tool is For

A user with QGIS installed locally and the ability to make a basic map.

Takeaways

The Azimuth and Distance Plugin provides the COGO functionality in QGIS.

The Plugin can be installed following these steps.

AZIMUTH AND DISTANCE PLUGIN INSTALLATION

Install the Plugin

Plugins (1) ⇒ Topography Group

Select the Azimuth and Distance Plugin (2)

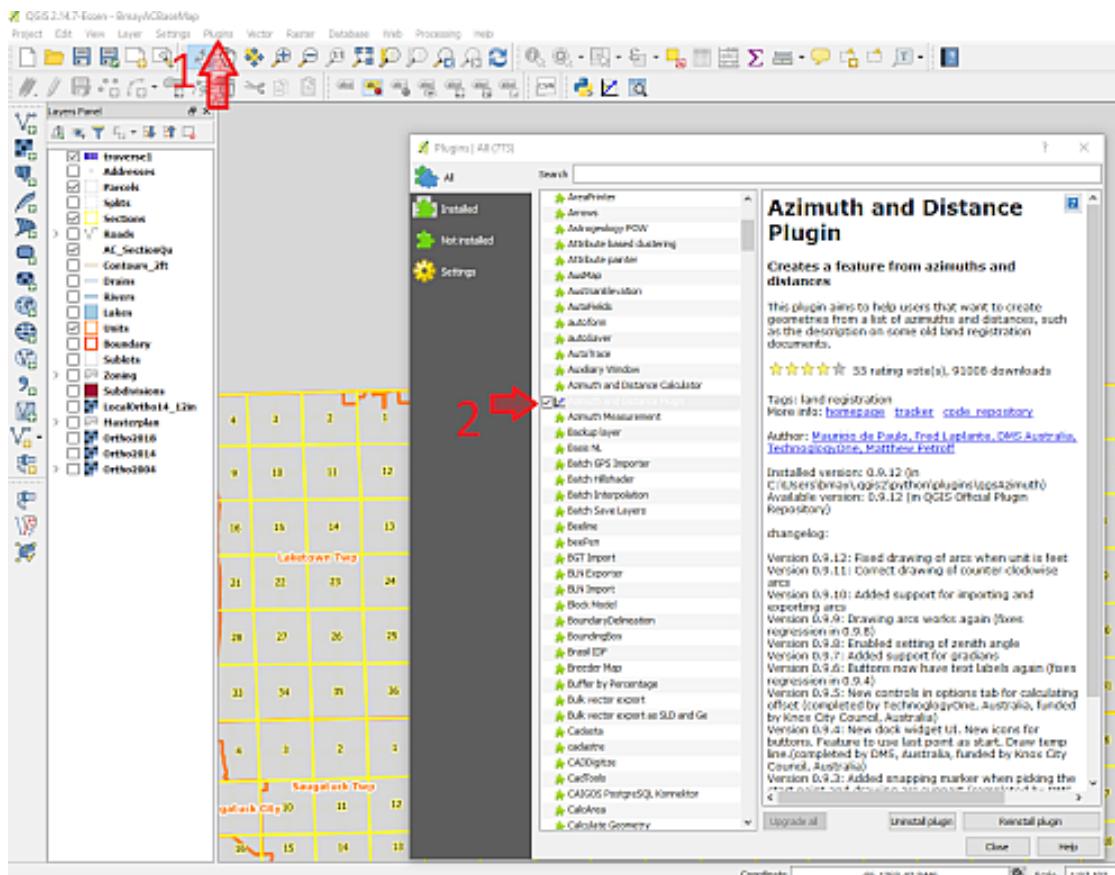

Figure 6.46: Launch Plugin

Azimuth and Distance Plugin Tool is Added to Toolbar

Figure 6.47: COGO Icon

6.9.2 COGO TOOLS IN QGIS

TOOL SUMMARY

Transfers of real property typically involve a Metes and Bounds description:

Commencing at Southeast corner of Section 1, Town 2 North, Range 11 West, Martin Township, Allegan County, Michigan; thence North 88 degrees 32 minutes 05 seconds West 1338.44 feet along the south line of said section to the point of beginning; thence North 01 degrees 27 minutes 55 seconds East 388 feet; thence South 88 degrees 32 minutes 05 seconds East 584 feet, more or less, to the centerline of the Gun River; thence southerly along said centerline to the south section line; thence West along said section line to the point of beginning.

Figure 6.48: Description From Deed

Background

In GIS, *Coordinate Geometry* or **COGO** tools convert written descriptions of real property into digital map features.

Users in several county departments use COGO tools in their regular workflow.

The COGO tools in ArcGIS require an advanced license.

Who the Tool is For

A user with QGIS installed locally and the ability to make a basic map.

Why the Tool is Needed

A tool is needed to convert between written descriptions of real property and digital map data.

Takeaways

QGIS is an open source GIS without a built in COGO toolset.

The Azimuth and Distance Plugin provides the COGO functionality in QGIS.

Following are instructions for using QGIS for COGO

To use COGO tools in QGIS, follow these steps

Step 1:

Launch and Configure the Azimuth and Distance Plugin

*Plugin installation is covered in a separate document.

Figure 6.49: COGO Icon

*This tool draws in a temporary layer or in an active map layer.

Select **traverse1** as active layer in the tool.

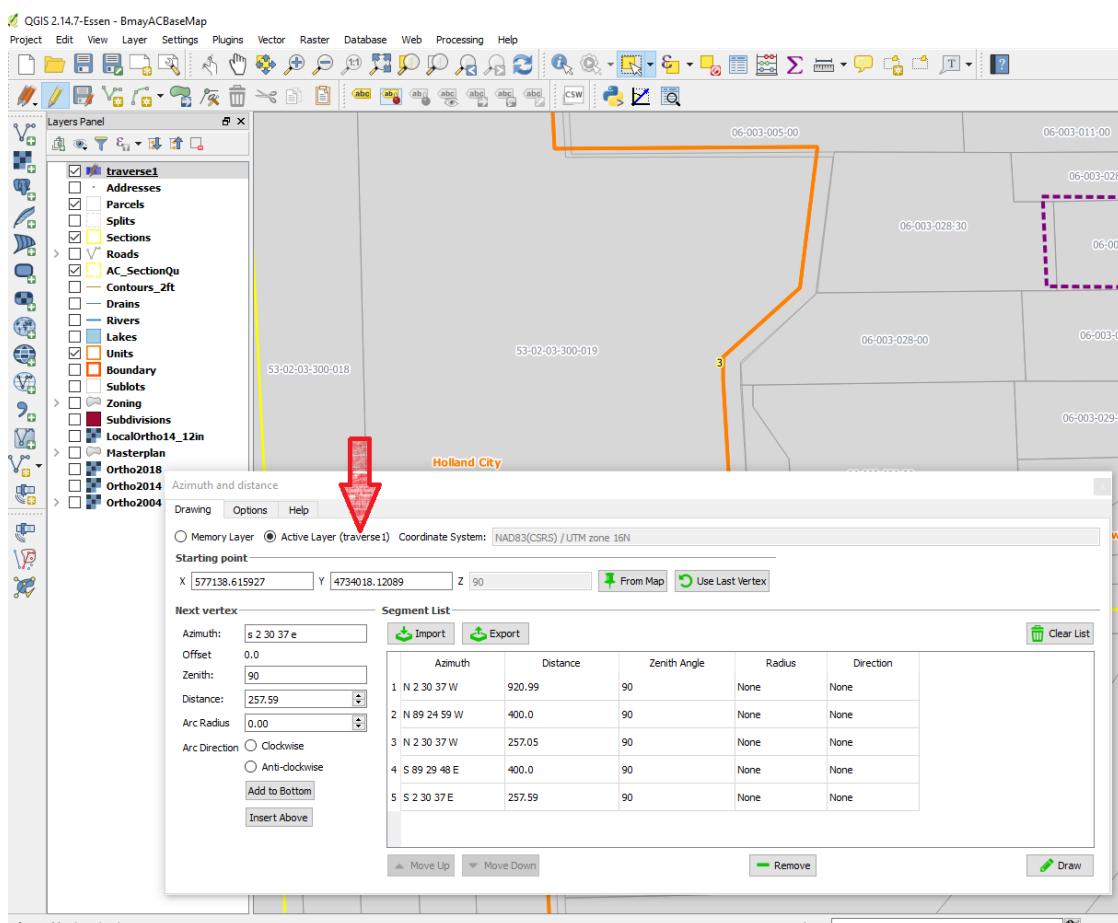

Figure 6.50: Check Active Layer

Configure Options in Plugin

On the **Options** Tab: Select these radio buttons;

- **Boundary**
- **Bearing**
- **Feet**
- **Degree**

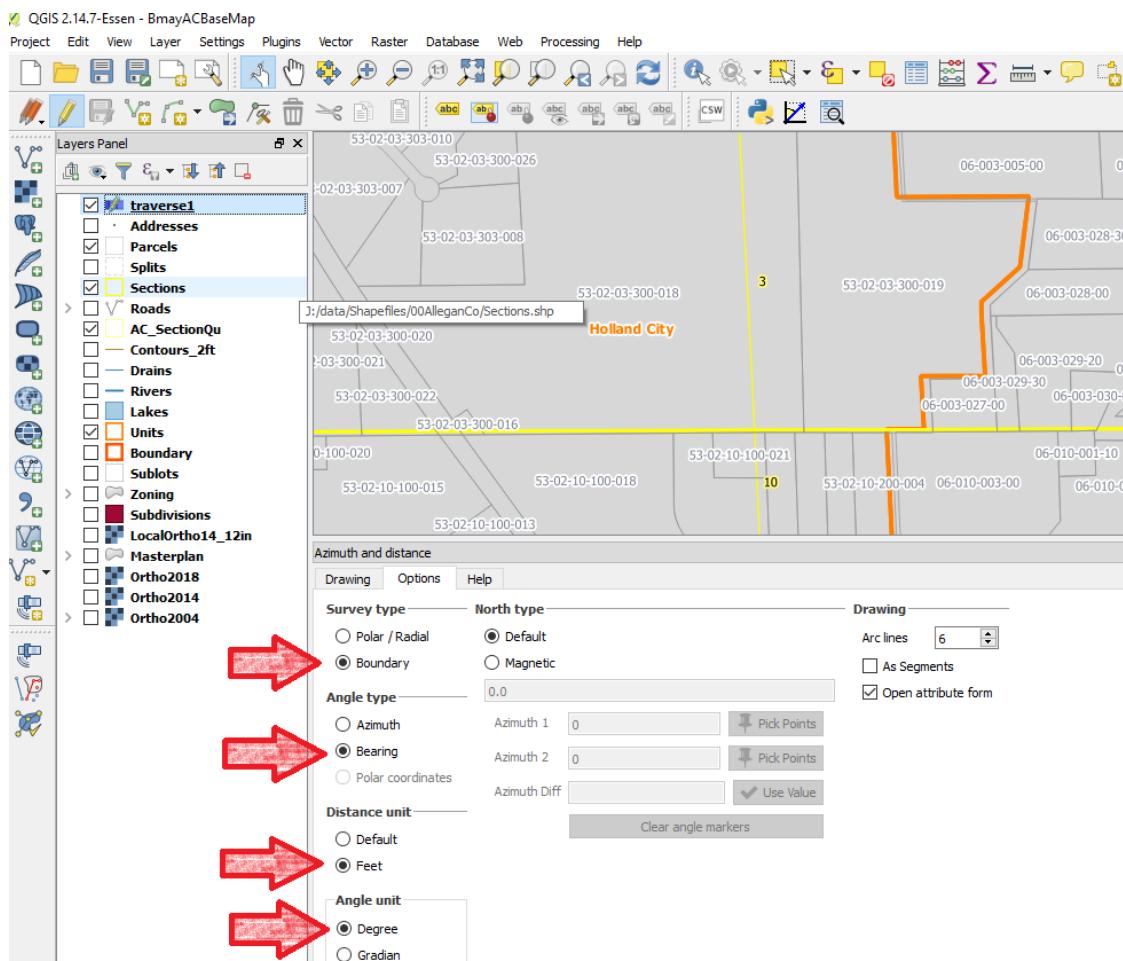

Figure 6.51: Plugin Options

Step 2: Activate traverse layer in map

*For a map layer to be editable, it must be activated in the Layers Panel.

(If necessary) left click the layer **traverse1** in Layer Panel to activate it.

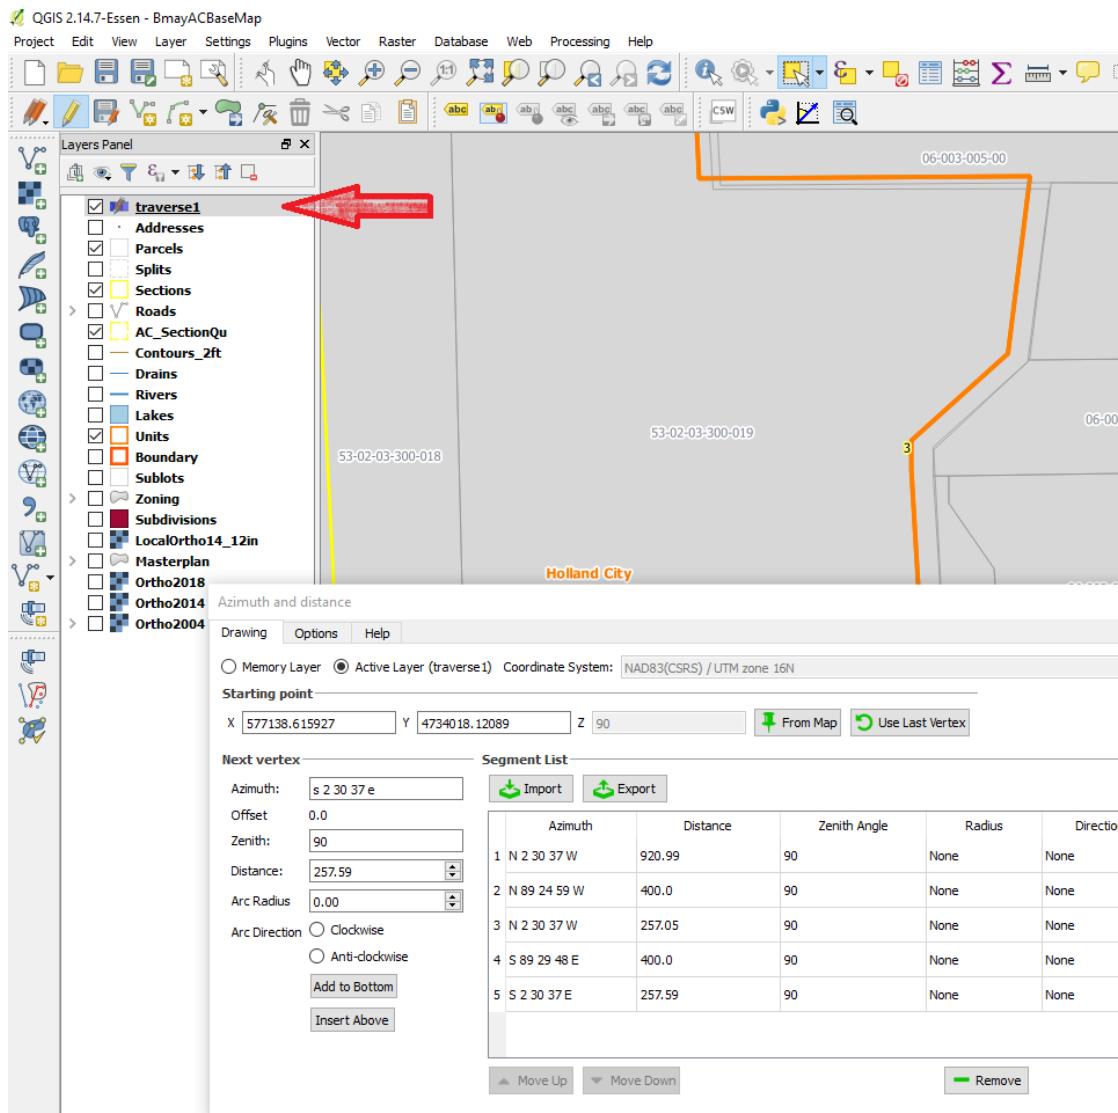

Figure 6.52: activate layer

Step 3: Locate the Point of Commencement

To get to the Point of Commencement,

Use **any combination** of the following methods:

- Use Reference Layers such as Units, Sections, Quarter Sections, and Parcels.

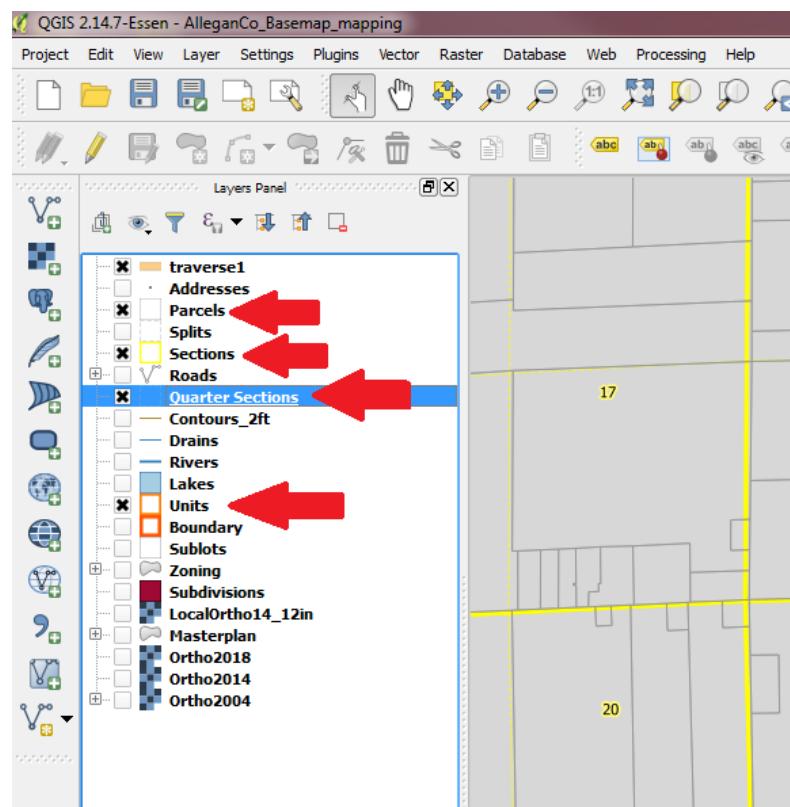

Figure 6.53: Select Reference Layers

➤ Use the Measuring Tool

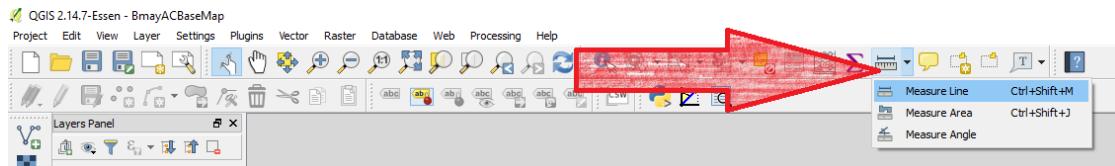

Figure 6.54: Measuring Tool

➤ Search by Parcel Number (Search Layers Plugin)

Figure 6.55: Search Layer Icon

➤ Draw COGO lines (Step 4)

Step 4: Draw a Line With Azimuth and Distance

Commencing at Southeast corner of Section 1, Town 2 North, Range 11 West, Martin Township, Allegan County, Michigan; thence North 88 degrees 32 minutes 05 seconds West 1338.44 feet along the south line of said section to the point of beginning; thence North 01 degrees 27 minutes 55 seconds East 388 feet; thence South 88 degrees 32 minutes 05 seconds East 584 feet, more or less, to the centerline of the Gun River; thence southerly along said centerline to the south section line; thence West along said section line to the point of beginning.

Figure 6.56: Description From Deed

On the Drawing Tab:

- Azimuth (bearing): Enter Bearing in format: *N 88 32 05 W*
- Offset: Set to *0*
- Zenith: Set to *90*
- Distance: Enter Feet Distance in numbers only *1338.44*

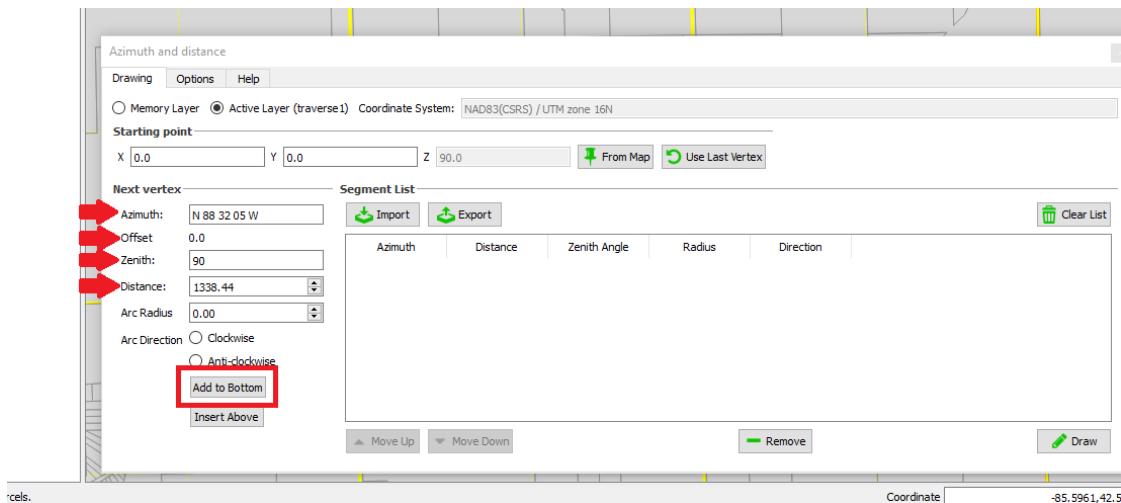

Figure 6.57: Entering Bounds

Push **Add to Bottom**

Line is added to the list

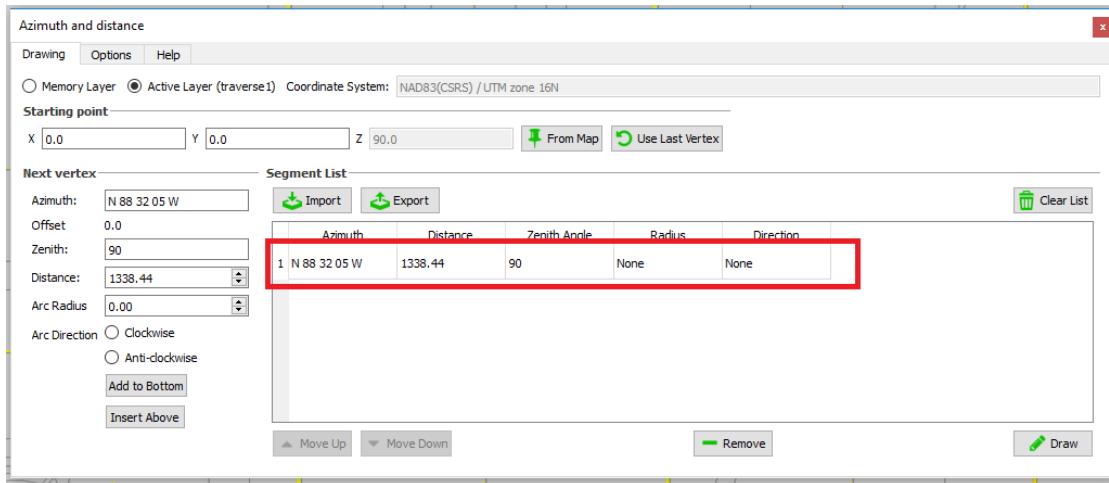

Figure 6.58: Line Added

Add as many bounds as you can from the description

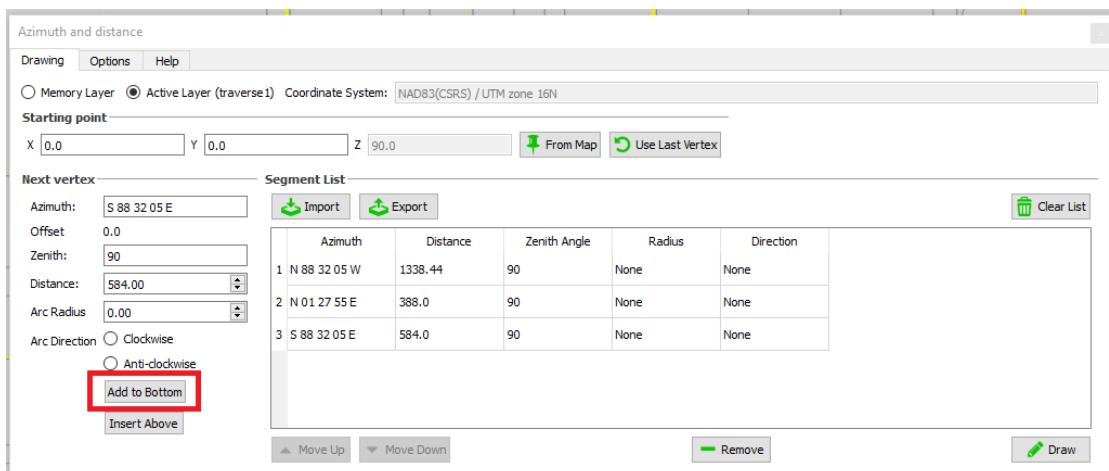

Figure 6.59: Three Lines Added

Choose A Point to Start Drawing From

Push the **From Map** button.

*Decide which layer to reference for a starting point.

Align cursor with desired starting point and click.

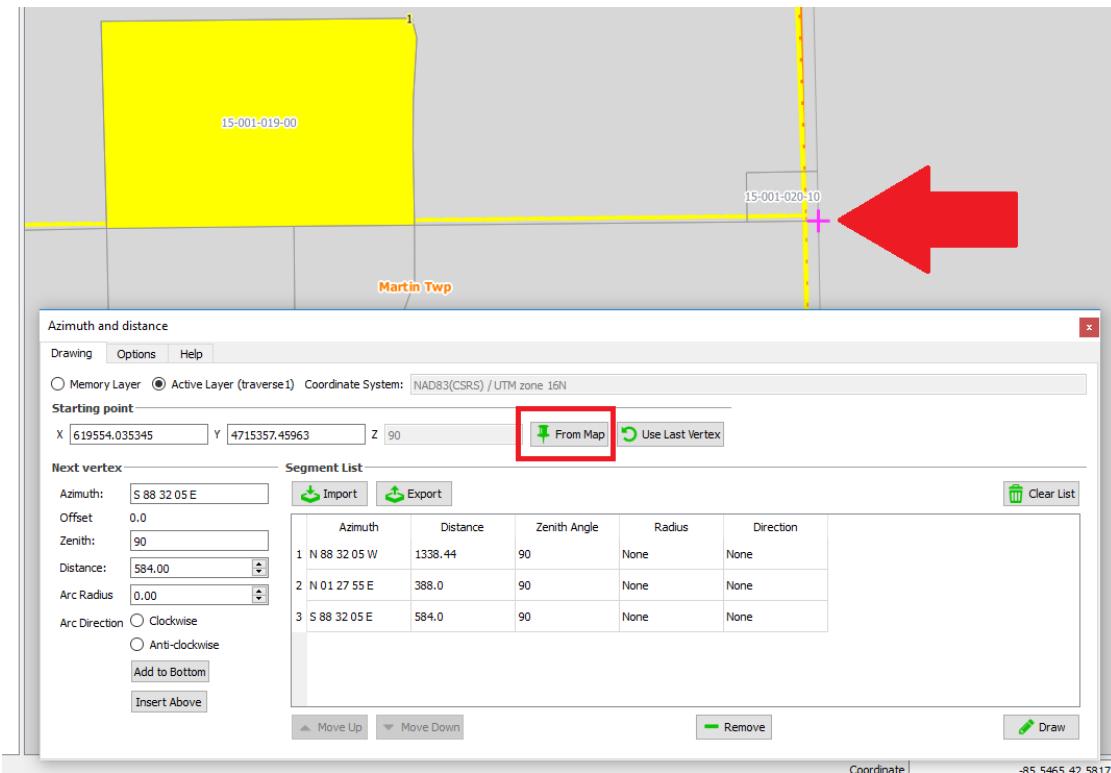

Figure 6.60: From Map

Draw the Segments So Far

- Push **Draw**
- Enter Attributes for the polyline to be created
- Press **OK**

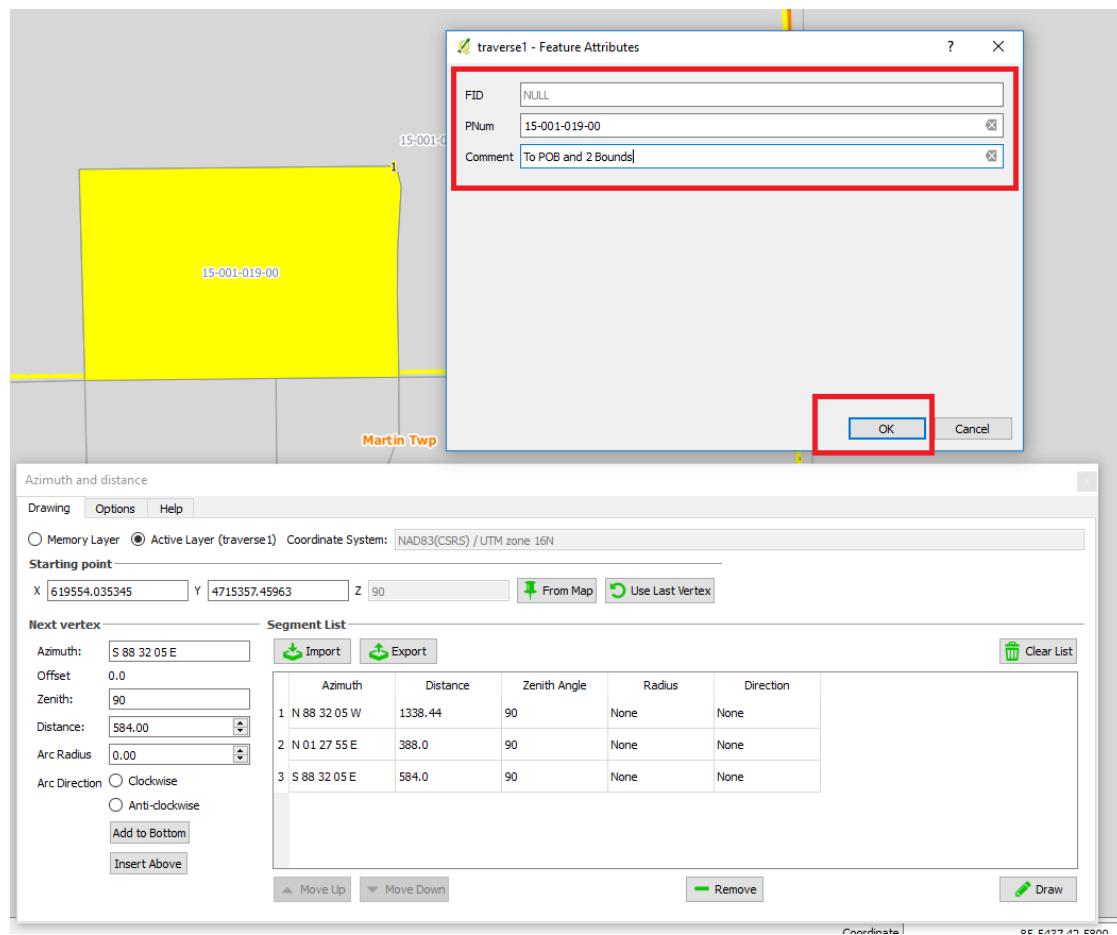

Figure 6.61: Enter Attributes

Use the sketch to identify the parcel

In this case, turn on ortho photo to verify the remaining bounds.

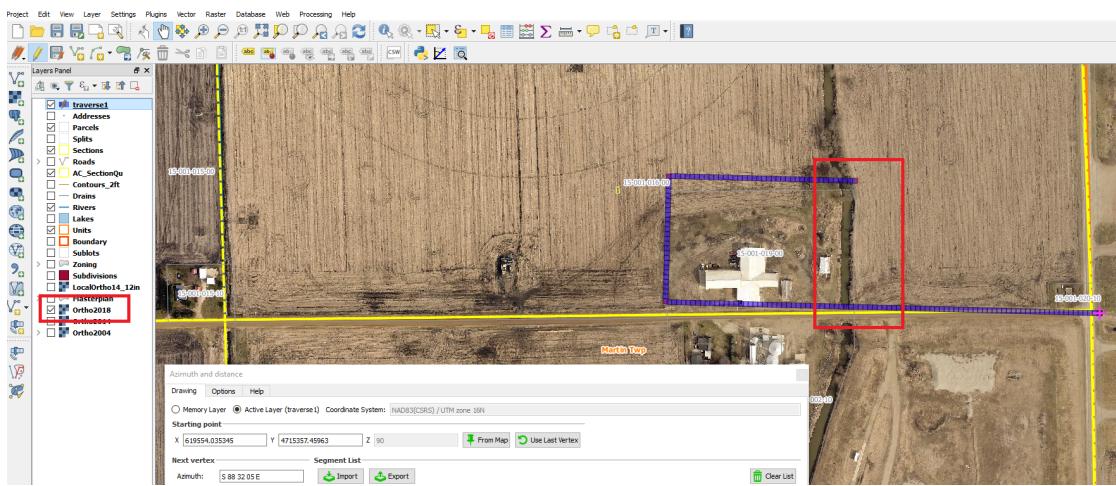

Figure 6.62: Verify Remaining Bounds

(optionally) Save Input for Later Use

If you want to save the segments for later use, press **Export**.

Name it and select a **save** location.

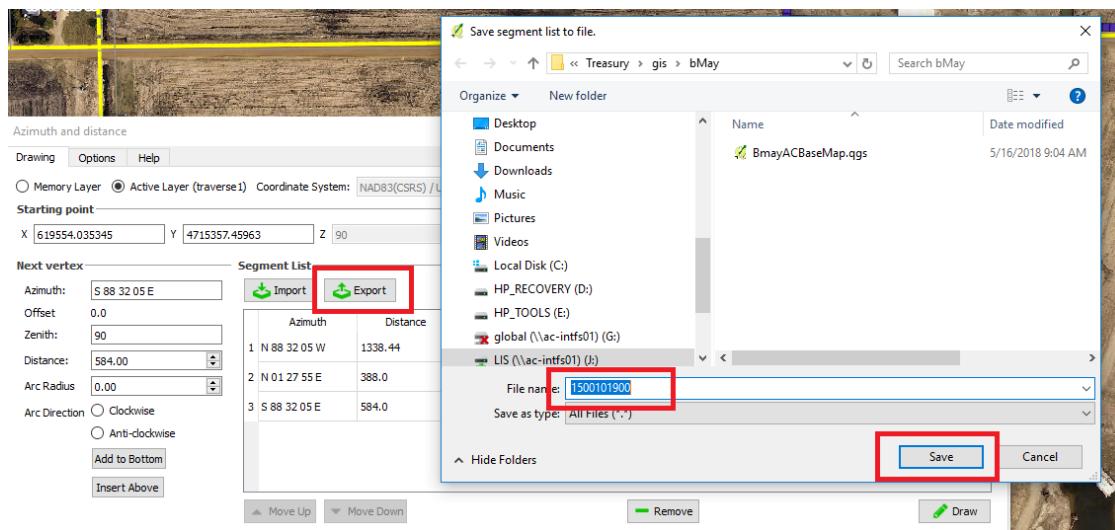

Figure 6.63: Save Segment List

Verify Attributes

Right click on **Traverse1** in the Layers Panel

and select **open attribute table**.

The attributes you entered should be in the table.

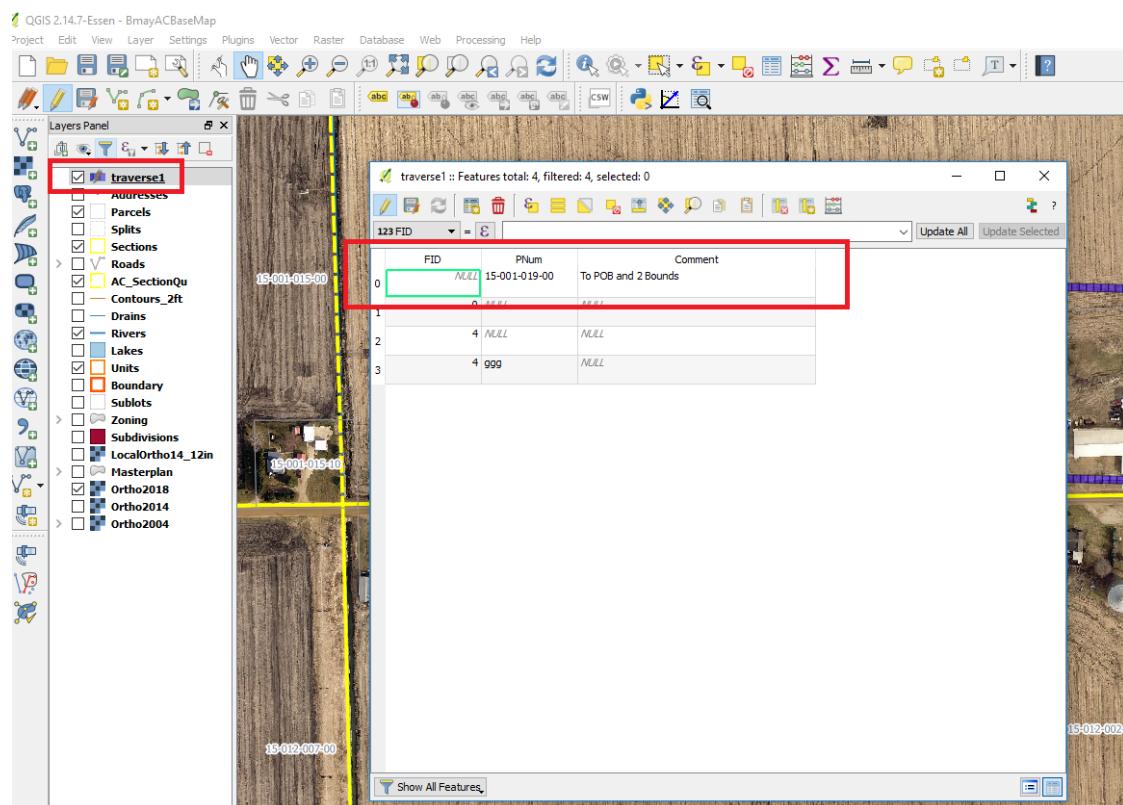

Figure 6.64: Segments In Table

6.9.3 SEARCH LAYERS PLUGIN

TOOL SUMMARY

QGIS has some tools built in and others can be added via the Plugin architecture.

Background

QGIS is an open source GIS and search by feature attributes is needed.

Who the Tool is For

QGIS users that require a search by attributes tool.

Why the Tool is Needed

QGIS users need a tool to search for features by attribute.

Takeaway

The Search Layers Plugin can be added to any installation of QGIS.

P L U G I N S E T U P

Install Search Layers Plugin

- To install: Plugins ⇒ **Search Layers** Plugin ⇒ Install

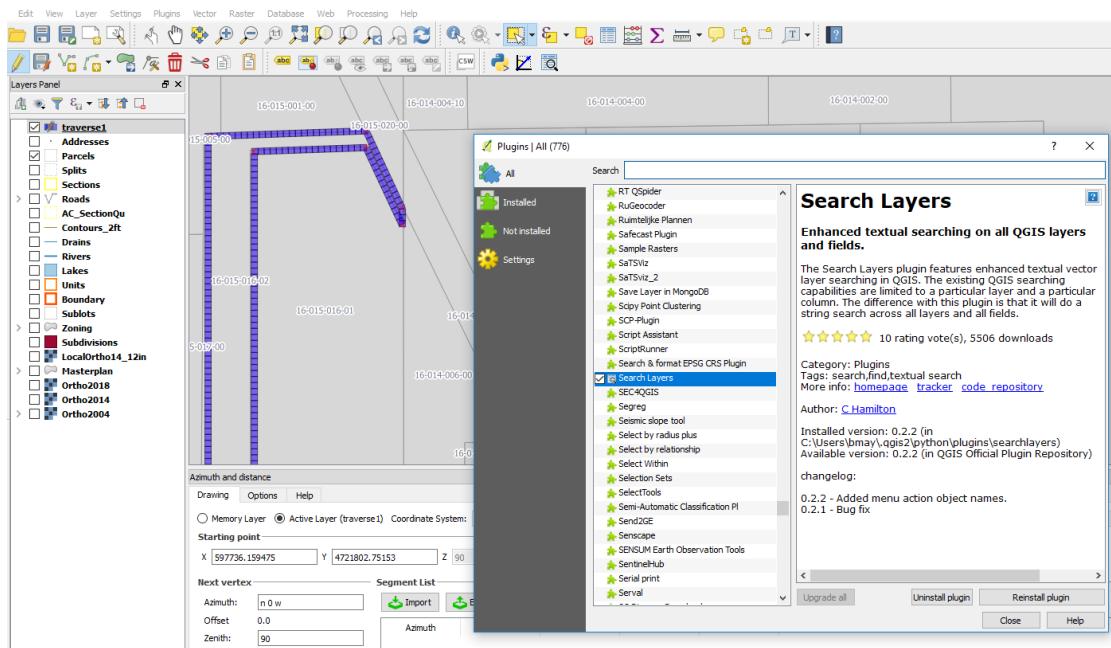

Figure 6.65: Search Layers Plugin

Search Layers Plugin Tool is Added to the Toolbar

Figure 6.66: Search Layer Icon

USING THE PLUGIN

Enter Parcel Search Data

In The Search Layers Plugin:

- Enter **parcel number** (with dashes) into *Search String*
- Select **Parcels** in *Search Layers*
- Select **PARCELID** in *Search Fields*
- Select **=** in *Comparison*

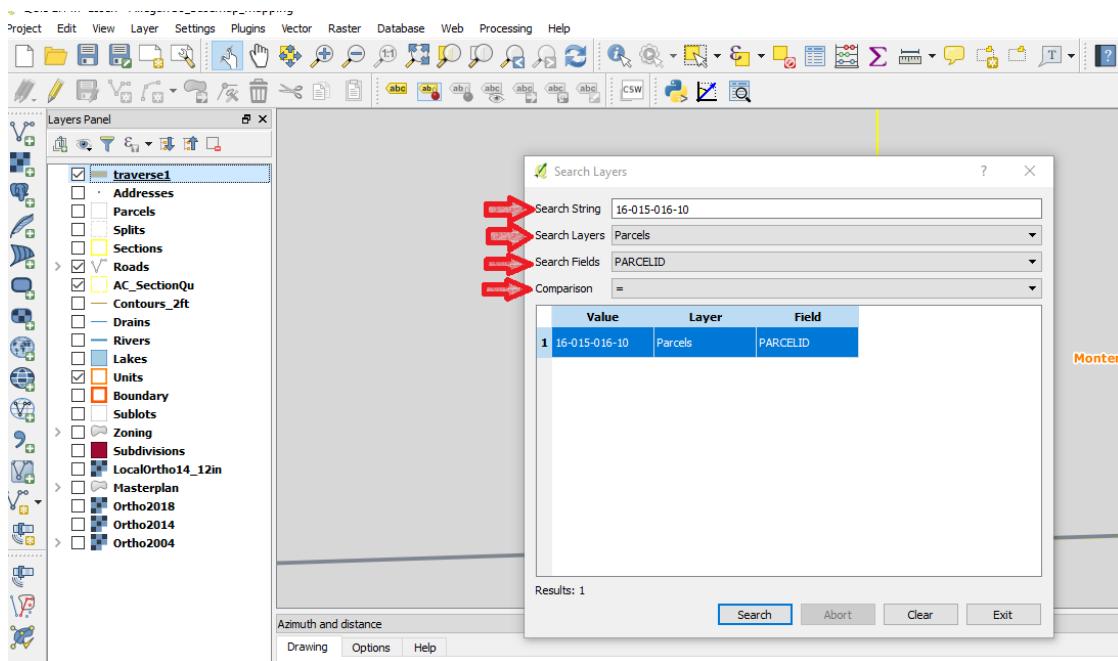

Figure 6.67: Search Layers Setup

- click on result in table

Screen zooms into the selection

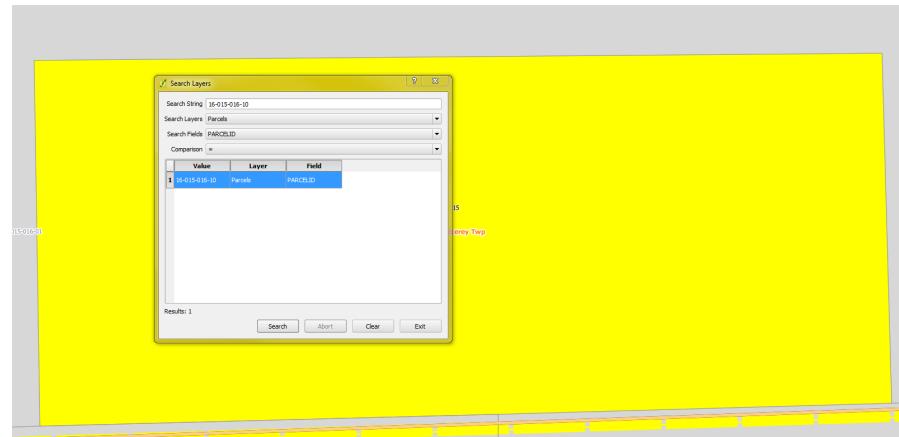

Figure 6.68: Search Results

Zoom out far enough to find a reference point

Figure 6.69: Search Results Zoomed Out

Using a spreadsheet to convert the dimensions To use Northing and Easting from survey plans: In a spreadsheet, adjust the data to be relative to the 1st point

So if a survey gives you:

Pt	Northing	Easting
1	995.9952	9766.6
2	994.3049	9112
3	989.234	7150
4	1194.3099	9114
5	1193.266	8710.2059
6	1193.0954	8644.2016
...
32	1617.7856	8827.4296

Table 1: Survey Plan Northing and Easting

Calculate Relative North and Relative Easting of the points to Point 1 by subtracting the point 1 values from each of the other points.

Use formulas:

	A	B	C	D	E
1	Pt	Northing	Easting	Relative NS	Relative EW
2	1	995.9952	9766.6	0	0
3	2	994.3049	9112	=B3-B\$2	=C3-C\$2
4	3	989.234	7150	=B4-B\$2	=C4-C\$2
...
6	32	1617.7856	8827.4296	=B9-B\$2	=C9-C\$2

Table 2: Survey Plan Northing and Easting

Giving you:

	A	B	C	D	E
1	Pt	Northing	Easting	Relative NS	Relative EW
2	1	995.9952	9766.6	0	0
3	2	994.3049	9112	-1.6903	-654.6
4	3	989.234	7150	-6.7612	-2616.6
...
6	32	1617.7856	8827.4296	621.7904	-939.1704

Table 3: Relative Northing and Easting

So to place pt 32:

From pt 1:

Use distances 621.7904' N and 939.1704'W
