## Awards

### 1.1 THE GIS CHAMPION AWARD

#### 1.1.1 GIS CHAMPION

An individual whose actions promote the use of GIS

#### GIS CHAMPION AWARD

Figure 1.1: Example GIS Champion Award

## Background

Though Allegan County has had a formal GIS department for over 20 years, few people have learned to use it.

## Statement of Problem

GIS is underutilized in Allegan County government. The county would benefit from more GIS use in its government. Currently there is no formal recognition of individuals that promote GIS.

## Analysis

The GIS Champion Award is a simple method of recognizing those that promote GIS in the county.

## Past GIS Award Recipients

- Ian Hanes
  - Karen
  - Brian Redmon
-

## 2.1 ABOUT DOCUMENTATION

### 2.1.1 HOW JALAPEÑO WORKS

#### PROBLEM AND ANALYSIS

#### Background

GIS Services has complicated and evolving workflows and uses everchanging technologies

lems with:

- version control
- finding the documentation
- disseminating the documentation

#### Statement of Problem

GIS documentation has traditionally been done in different formats and stored in many different files and folders in the county network. This has resulted in prob-

#### Analysis

The Jalapeño folder along with some open-source software provides a robust documentation tool for GIS documentation.

## Default sizes in Jalapeño

## GENERAL NOTES:

- jalapeno folder is a git package. <https://github.com/nbesteman/jalapeno>
- Project is coded with relative paths and jalapeno can be located anywhere.

## PROJECT FILE STRUCTURE:

**...\\jalapeno\\..**

folder	description
documentation	resources used in Jalapeño
processing	.tex documents and build folders
source	common image files

**...\\jalapeno\\documentation\\..**

folder or file	description
moduleTemplates	.tex templates
packageDocs	L <small>A</small> T <small>E</small> X documentation
references	reference and appendix resources
unsorted	catch all for unsorted documentation
BookStructureMM.mm	A mindmap of jalapeno

**...\\jalapeno\\processing\\..**

folder or file	description
...Part	folders of book <i>parts</i>
build	L <small>A</small> T <small>E</small> X folder for .pdf output and temp files
build\\referenceEntries.bib	entries that appear in references
commonTitle.tex	code for all title pages
fullCompile.sh	shell script to compile GISDocumentation.tex
GISDocumentation.tex	master document code
glossaryEntries.tex	entries that appear in glossary
indexEntries.tex	entries that appear in the index
preamble.tex	preamble code for all documents

### \*Note about referenceEntries.bib

Any reference entries built here can be cited in any .tex document in the project.

## U S I N G T H E G L O S S A R Y

### Glossary Requirements

Glossary commands require a Perl interpreter. Activeperl is a free Perl interpreter and can be downloaded from:

<https://www.activestate.com/activeperl/downloads> (A typical installation adds Perl to your path). Compiling the glossary requires running the makeglossaries command either in a  $\text{\LaTeX}$  IDE or in command line as described here. PDFLatex must be run first to create a .aux file that is used by makeglossaries to create an .gls file. After the .gls file is created, PDFLatex must be run again to insert the glossary at the \printglossaries location.

### Creating a new glossary entry

To **create a new glossary entry**: Add an entry to glossaryEntries.tex. Save it there and then use the makeglossaries command to recompile the .gls file.

### Rebuilding the glossary

To Recompile the .gls. In the (main document)build folder:

- Launch command prompt
- enter command: **makeglossaries GISDocumentation\***

#### \*Note:

This command reads the .aux file and creates the .gls file. The .aux file is created by compiling with PDFLatex. If there is no .aux file the command will fail.

### Using glossary terms in a subdocument:

In the subdocument you must add code to input the glossaryEntries file. For example:

After the line:

```
\input{../../../../../preamble}
```

---

Add the line:

```
\input{../../glossaryEntries}
```

## To use a glossary term in the subdocument:

In place of the term, use code referencing the key (in the glossaryEntries file):

- \gls{key}

## To add the glossary to the subdocument:

- Add the line \makeglossaries to the preamble of the subdocument.
- Add the line \printglossaries to the subdocument.
- Run makeglossaries in command line on the subdocument similar to how is described above.

# U S I N G T H E B I B L I O G R A P H Y ( R E F E R E N C E S )

## Bibliography requirements

Compiling the bibliography requires running bibtex either in a  $\text{\LaTeX}$  IDE or in command line as described here. PDFLatex must be run first to create a .aux file that is used by bibtex to create a .bbl file. After the .bbl file is created, PDFLatex must be run again to insert the bibliography at the \bibliography location.

For example, the command:... \bibliography{referenceEntries}

...places the bibliography called referenceEntries.bib which must be in the same folder as the project .aux file.

## Creating a new bibliography entry

**To create a new bibliography entry:** Add an entry to referenceEntries.bib. Save it there and then use bibtex to recompile the .bbl file.

---

## Rebuilding the bibliography

To Recompile the .bbl. In the (main document)build folder:

- Launch command prompt
- enter command: **bibtex GISDocumentation**

### \*Note:

This command reads the .aux file and creates the .bbl file. The .aux file is created by compiling with PDFLatex. If there is no .aux file the command will fail.

## To cite a bibliography source in a subdocument:

In the place that you want the citation:

- `\cite[pg.#]{key}`

## Adding the bibliography to the subdocument

- Similar to adding to the master document but not documented here.

## U S I N G T H E I N D E X

### Index requirements:

Compiling the index requires running the makeindex command either in a  $\text{\LaTeX}$  IDE or in command line as described here. PDFLatex must be run first to create a .aux file that is used by makeindex to create an .idx file. After the .idx file is created, PDFLatex must be run again to insert the index at the \printindex location.

## Creating a new index entry

To **create a new index entry**: Add an entry to indexEntries.tex. Save it there and then use the makeindex command to recompile the .idx file.

---

## Rebuilding the index

**To Recompile the .idx** In the (main document) build folder:

- Launch command prompt
- enter command: **makeindex GISDocumentation\***

\*Note:

This command reads the .aux file and creates the .idx file. The .aux file is created by compiling with PDFLatex. If there is no .aux file the command will fail. Run PDFLatex first

## Access the index from a subdocument

In the subdocument you must add code to input the indexEntries file. For example:

After the line:

```
\input{.../.../.../preamble}
```

Add the line:

```
\input{.../.../.../indexEntries}
```

## To use a index term in the subdocument:

In place of the term, use code referencing the key (in the indexEntries file):

- \index {key}

## To add the index to the subdocument:

- Add the line \makeindex to the preamble of the subdocument.
  - Add the line \printindex to the subdocument.
  - Run makeindex in command line on the subdocument similar to how is described above.

## 4.1 FOR TREASURER DEPARTMENT

### 4.1.1 FORFEITURE DATA COLLECTION

#### PROBLEM AND ANALYSIS

#### Background

Treasurer department has an annual responsibility to properly document the tax forfeiture process. The LIS Department built an application in MS Access and MapInfo that consumed a daily export from BSA and was deployed to the field on a laptop. A digital camera was used for site photos and later imported into the laptop.

#### Statement of Problem

The current Tax Forfeiture workflow is built on MapInfo software and MS Access and executed on a laptop pc. Both MapInfo and MS Access are no longer supported in county workflows. ESRI software can be used to rebuild the workflow. *Forfeiture Data Collector Application, (Forfeiture App)* must be recreated in the ESRI framework.

#### Analysis

**Forfeiture App** will facilitate: *Mobile data collection on a handheld device,:* (**Mobile Interface**) and an *in office workflow to complete data processing,* (**Pre and PostProcessing**)

#### Mobile Interface

- Synchronize with data in the office (online)
- Collect data and photos of forfeiture sites (offline)
- Synchronize the collected data with data in the office (online)

#### Pre & Post Processing

- Produce and print a form for each site visited with required data and images

## DESIGN OVERVIEW

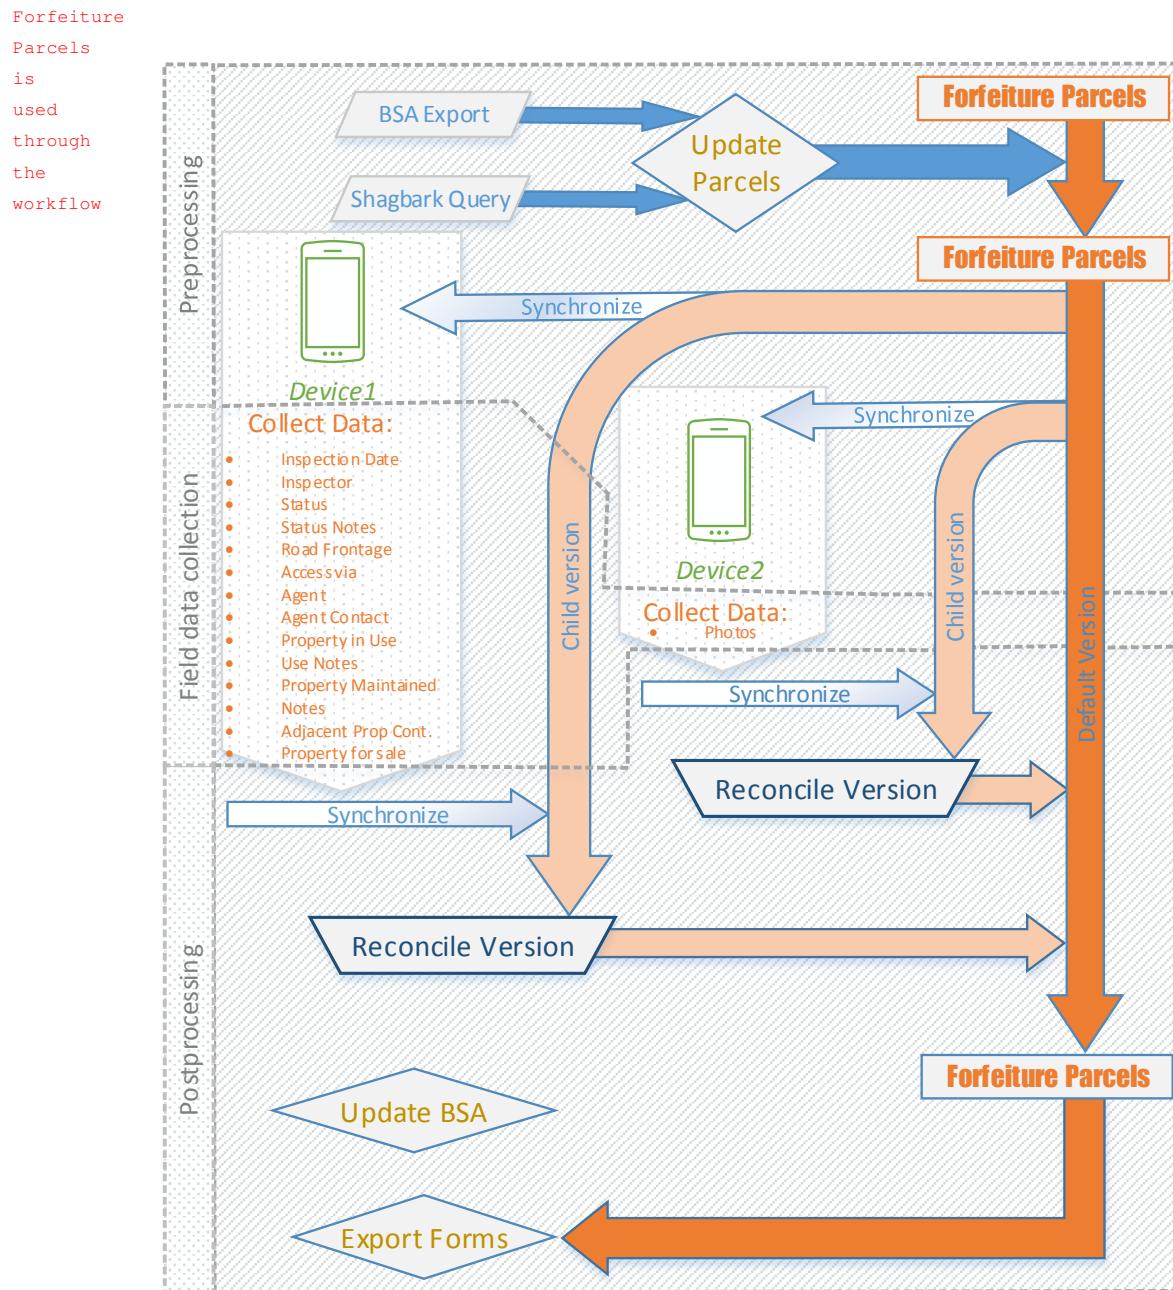

Figure 4.1: Project Design

## Forfeiture App Summary

There are **three parts** to the daily routine:

### 1. Preprocessing (in the office):

- Export current forfeiture list from BSA
- Update Forfeiture Parcels with BSA export
- Update Forfeiture Parcels with contaminated sites information
- Synchronize Forfeiture Parcels to Mobile Interface

### 2. Field data collection with Mobile Interface:

- Aids in navigation
- Provides a Checklist of data points for each site
- Attaches photos for each site
- Save results for synchronization in post-processing

### 3. Post-processing (in the office)

- Synchronize data and images collected in Mobile Interface to Forfeiture Parcels
  - Export form for each site
  - Print form for each site
  - Update BSA data
-

## Technologies Used in The Forfeiture App

### BSA Data

Details of parcels in the forfeiture process are managed in BSA Delinquent Tax.net. The Treasurer office does a BSA export of the parcels in need of a site visit in the pre-processing.

### ArcGIS Desktop

Tools are designed to preprocess and post-process forfeiture parcel data for fieldwork. The user will execute a preprocess script tool that prepares the data for field deployment. After fieldwork, a post process script tool synchronizes data from the fieldwork with the live data on the Allegan County network.

### ArcGIS Collector

A free mobile application developed and tested on Android is deployed to the field for data collection. The application is con-

figured to work offline (without an internet or cellular connection) by syncronizing before and after fieldwork. The user collects the necessary information on each forfeiture parcel in the field disconnected, and then uploads the changes when reconnected.

### Enterprise Geodatabase

Live data from a publishing geodatabase (ACPub), running on SQL Server database server (acintsql01) provides access to Forfeiture Parcels

### ArcGIS Portal

Forfeiture Parcels is served as a feature service (REST service) named TaxReversionParcels. A webmap on Portal, called the Forfeiture Field Map consumes the TaxReversionParcels exposing the data to editing. The Forfeiture Field Map is configured to work in the ArcGIS Collector App.

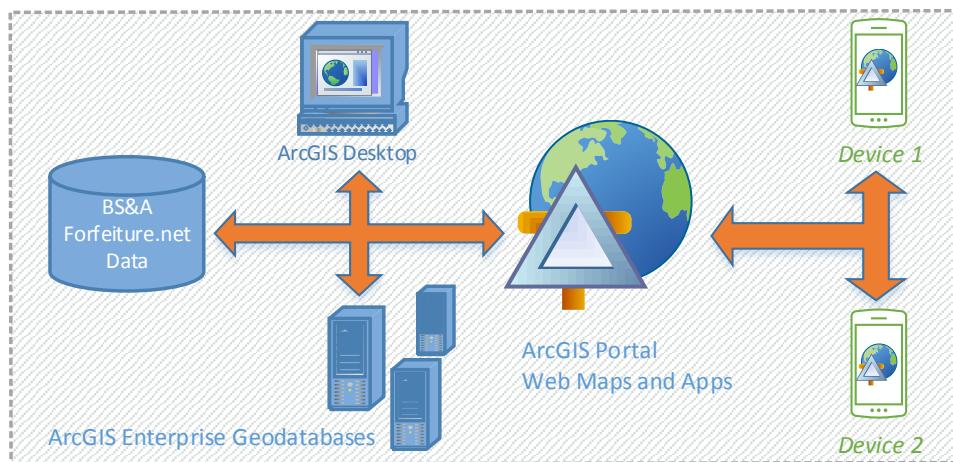

Figure 4.2: Technology Design

## DATA DETAILS

The data is located in a geodatabase called ACPUB. ACPUB is on SQL Server ACINTSQL01.

Table 4.1: Dataset Details

## Webmap Details

The Forfeiture Field Map is made up of a feature layer and a basemap.

The screenshot shows the 'Forfeiture Field Map' details page. At the top, there's a blue header bar with the title 'Forfeiture Field Map' and a 'Edit' button. Below the header are two tabs: 'Overview' (which is selected) and 'Settings'. The main content area starts with a section titled 'Edit Thumbnail' containing a circular logo for 'ALLEGAN COUNTY MICHIGAN'. To the right of the logo, the text reads: 'Map for field data collection in annual tax forfeiture processing by bmay531 Last Modified: August 21, 2018'. Below this is a 'Web Map' link and a 'Add to Favorites' button. The next section is 'Description', which has a placeholder 'Add an in-depth description of the item...'. Under 'Layers', there are two listed: 'TaxReversionParcels' and 'World\_Street\_Map'. The 'Access and Use Constraints' section contains a placeholder 'Add any special restrictions, disclaimers, terms and conditions, or limitations on using the item's content.'

Figure 4.5: Web Map Details

## Feature Layer Details

TaxReversionParcels has been configured for offline use.

The screenshot shows the 'TaxReversionParcels' details page. At the top, there's a blue header bar with the title 'TaxReversionParcels' and a 'Edit' button. Below the header are three tabs: 'Overview' (selected), 'Data', and 'Visualization'. The main content area starts with a section titled 'Edit Thumbnail' showing a small thumbnail of a map. To the right, the text reads: 'Map service exposing treasurer forfeiture data for edits by bmay531 Last Modified: August 20, 2018'. Below this is a 'Feature Layer' link and a 'Add to Favorites' button. The next section is 'Description', with a placeholder 'Add an in-depth description of the item...'. Under 'Layers', there's one listed: 'Tax Reversion Parcels'. Below it are buttons for 'Open In' and 'Service URL'. The final section is 'Access and Use Constraints', with a placeholder 'Add any special restrictions, disclaimers, terms and conditions, or limitations on using the item's content.'

Figure 4.6: Feature Layer Details

## Basemap Details

- A tiled basemap service is used
- The infoserv user credentials are used for sharing
- The url for the shared service is:

[https://tiledbasemaps.arcgis.com/arcgis/rest/services/World\\_Street\\_Map/MapServer](https://tiledbasemaps.arcgis.com/arcgis/rest/services/World_Street_Map/MapServer)

The screenshot shows the ArcGIS Online interface for the "World Street Map (for Export)" layer. At the top, there's a navigation bar with links for ArcGIS, Pricing, Map, Scene, Help, Sign In, and a search bar. Below the header, the title "World Street Map (for Export)" is displayed, with "Overview" selected. To the right of the title are three buttons: "Open in Map Viewer" (highlighted in blue), "Open in Scene Viewer", and "Open in ArcGIS Desktop".

The main content area contains a map thumbnail showing a small geographic area with a red bounding box, followed by a detailed description of the layer. The description states: "This layer presents highway-level data for the world and street-level data for many areas around the world. This layer is designed to support export of basemap tiles for offline use. ArcGIS Online Subscription required." It also mentions "Tile Layer by Esri", creation date (Oct 15, 2013), update date (Aug 15, 2018), view count (39,772), and two status buttons: "Authoritative" and "Subscriber".

On the left, there's a "Description" section with a detailed paragraph about the layer's purpose and capabilities. It mentions supporting exports of small volumes of basemap tiles for offline use, including highways, major roads, minor roads, one-way arrow indicators, railways, water features, cities, parks, landmarks, building footprints, and administrative boundaries. It also notes the layer is intended for use in ArcGIS applications and other applications.

On the right, there are sections for "Details" (Source: Map Service, Size: 1 kB, 5 stars), "Owner" (Esri), "Managed by" (esri), and "Tags" (World, Global, Europe, North America, United States, Southern Africa, Asia, South America, Australia, streets, street map, tile package, basemap, highways, roads, transportation, landmarks, parks, community, community basemap, map, AFA250\_base, current, esri\_basemap, general availability, export).

## ArcGIS Server

## ADMINISTRATIVE MANUAL

### Annual Setup

A new dataset for forfeiture parcels must be created each year.

The forfeiture information comes from BSA Forfeitures.net.

Parcel geometry and other attributes comes from ACParcelsCombined.

### Update the Forfeiture Dataset

To clear the features from the existing dataset:

- Use the Delete Feature Tools
- For Input Features:
  - AC\_Pub.DBO.ForfeitureParcels

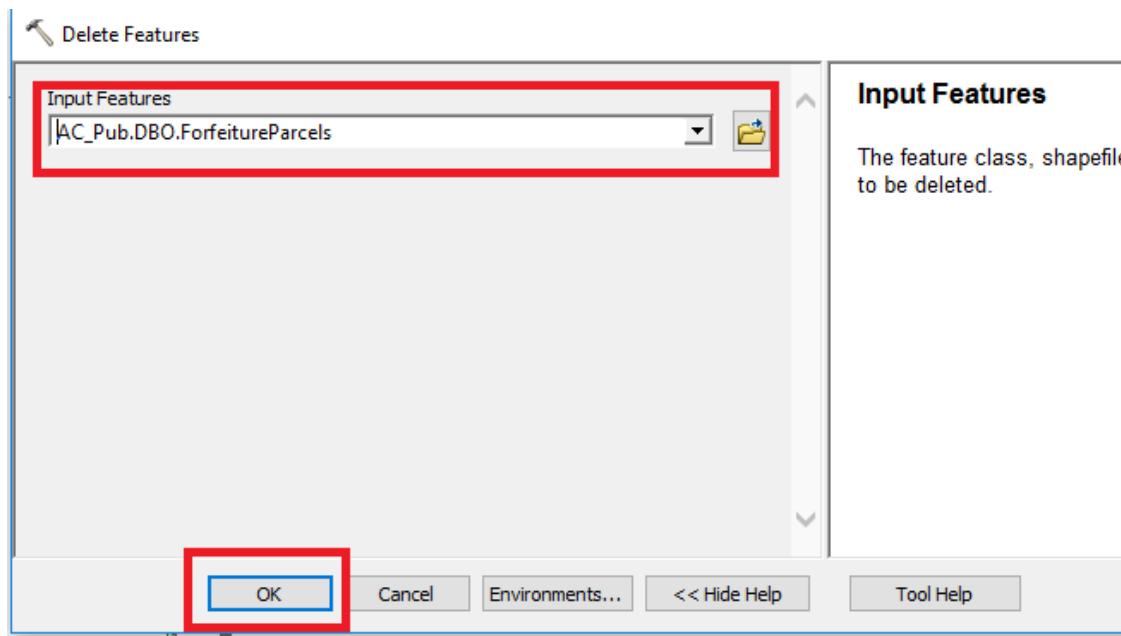

Figure 4.8: Delete Features

Push **OK**

## Create a Table Query For the New Data

- File ➔ Add Data ➔ Add Query Layer
- Select your connection

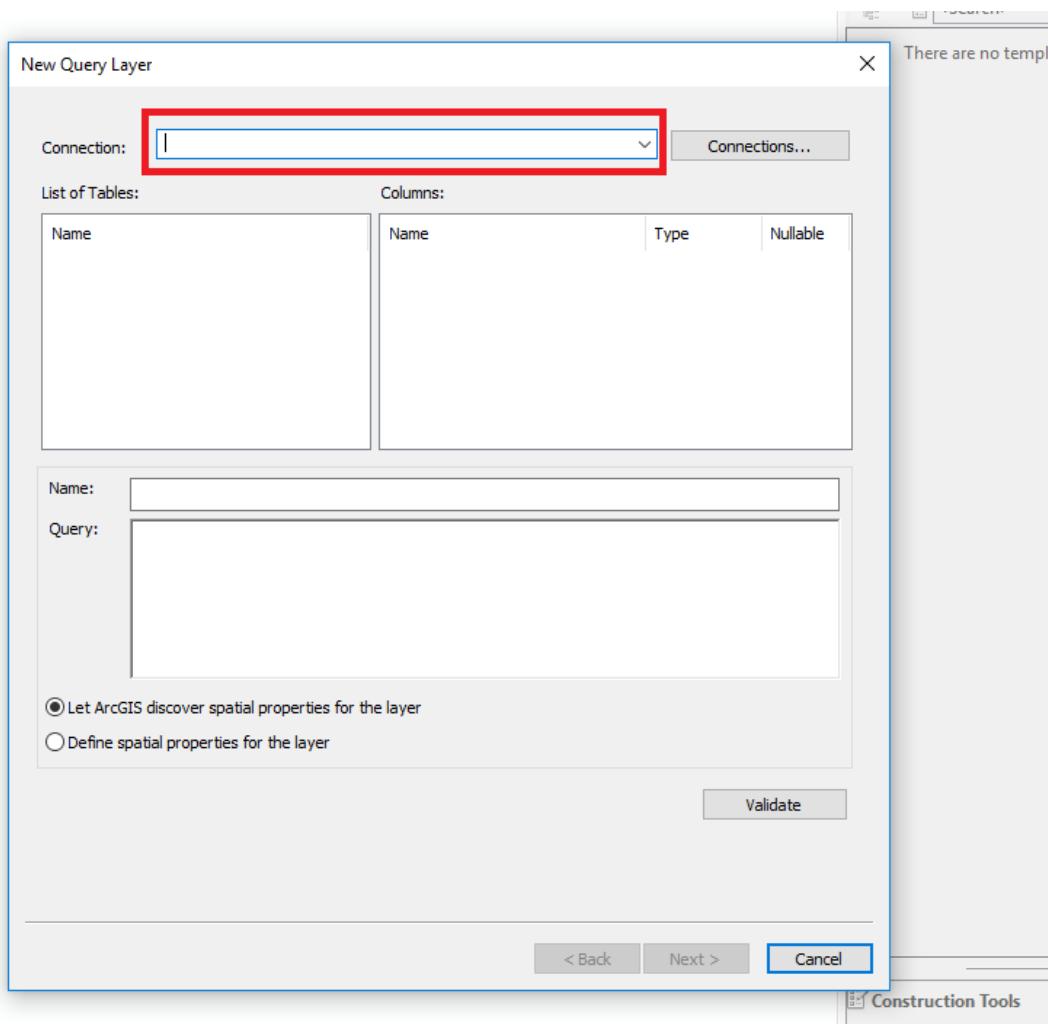

Figure 4.9: New Query Layer Dialog

Query Text:

```
SELECT [parcelnumber] FROM [D005ALLEGAN].[dbo].[Forfeitures]
WHERE forf_year = 2019
```

## Details of the Query Layer

- Choose connection
- Name the query
- Enter SQL query

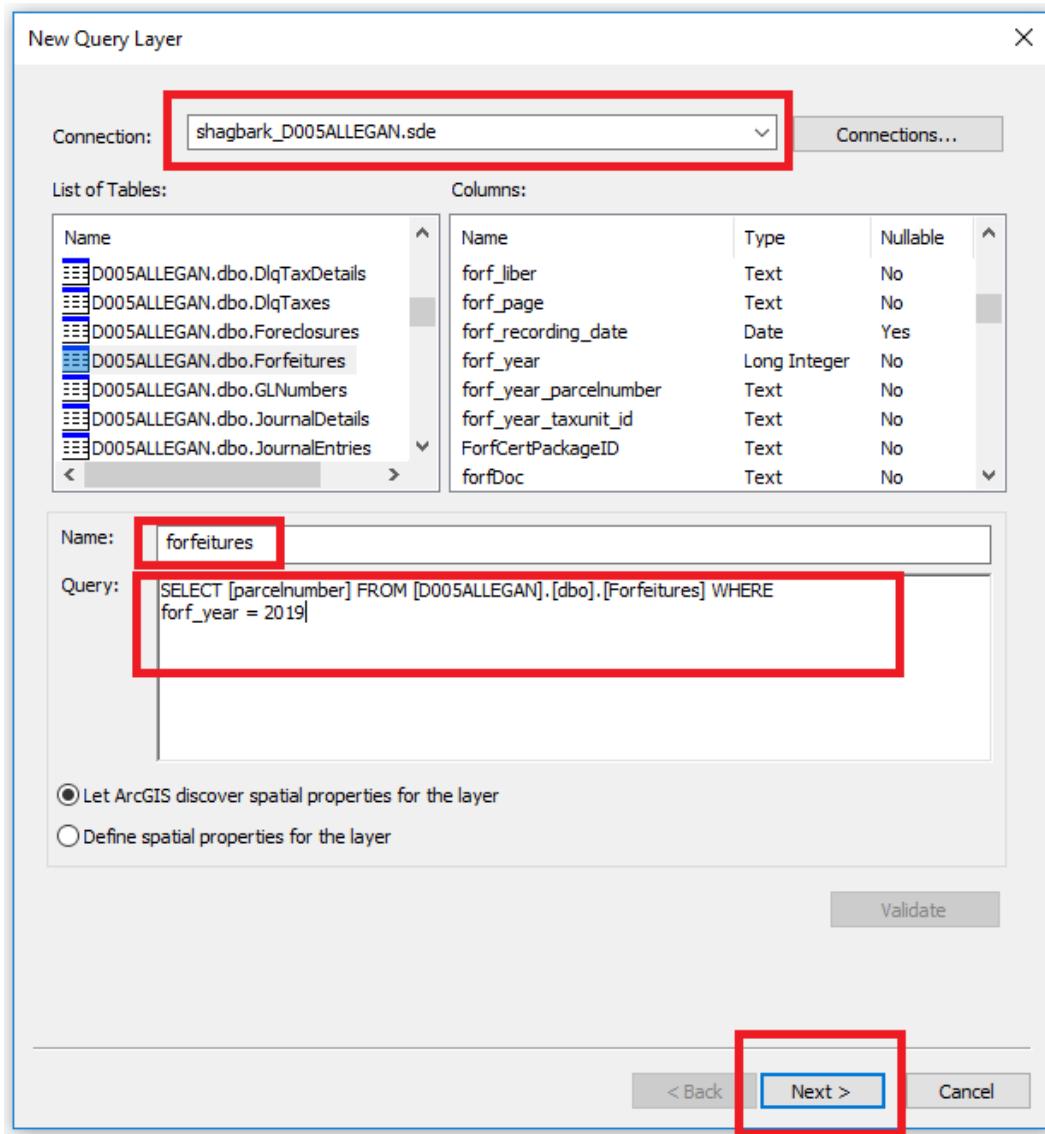

Figure 4.10: Forfeiture Query Layer Details

Push **NEXT**

## Select a Unique Identifier

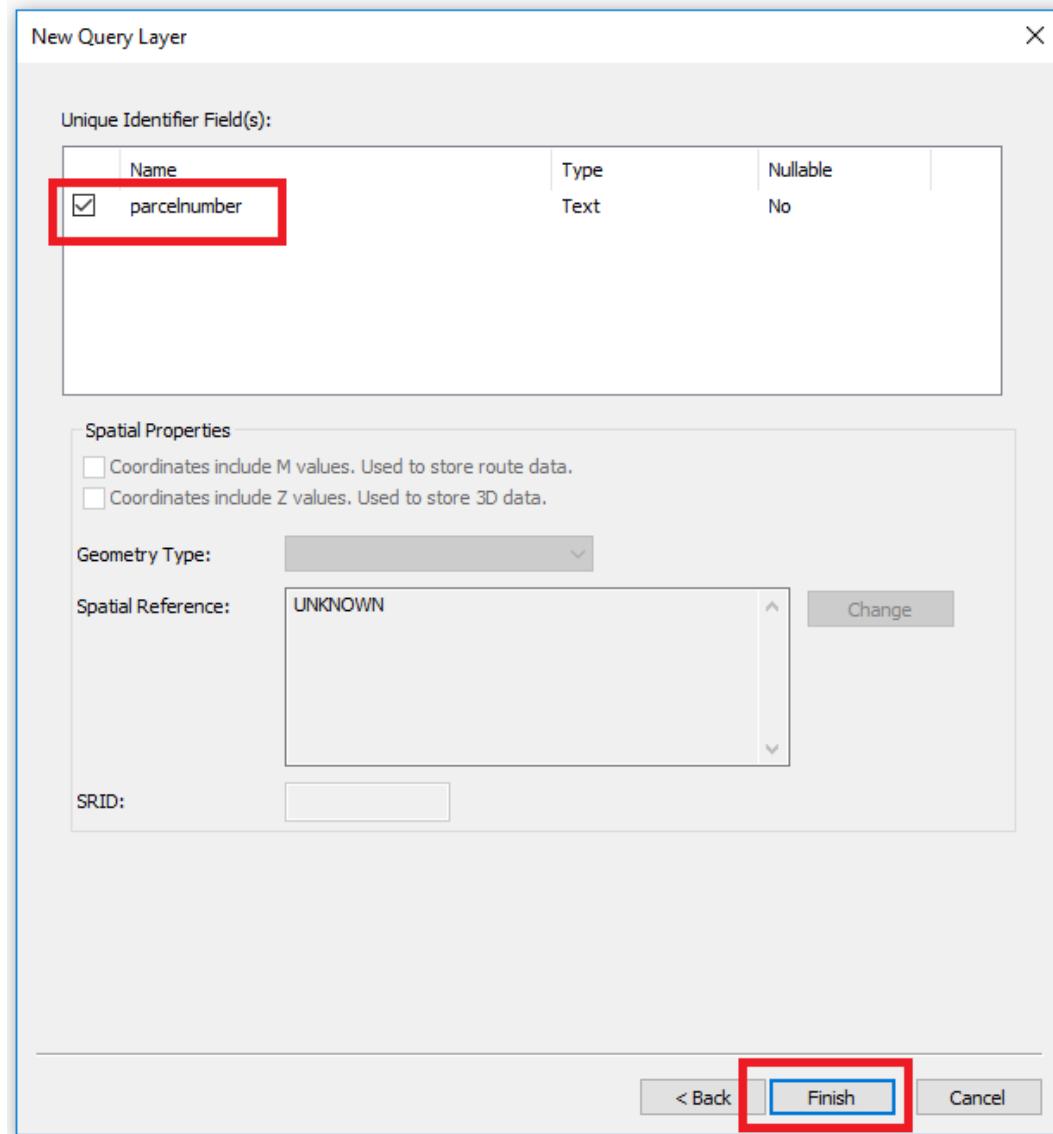

Figure 4.11: Query Layer Unique ID

Push **Finish**

Table is added to the map

The screenshot shows the ArcGIS Pro interface with two main windows: the Table Of Contents and a Table view.

**Table Of Contents:** This window displays a hierarchical list of layers. A red box highlights the "D005ALLEGAN" folder, which contains a layer named "D005ALLEGAN.DBO.forfeitures".

**Table View:** This window shows a table titled "D005ALLEGAN.DBO.forfeitures". The table has two columns: "parcelnumber" and "ESRI\_OID". The data consists of 836 rows, each containing a unique parcel number and its corresponding ESRI OID value. The first few rows are as follows:

parcelnumber	ESRI_OID
01-007-012-00	1
01-008-005-00	2
01-016-031-10	3
01-019-001-13	4
01-019-005-97	5
01-025-017-00	6
01-026-020-00	7
01-030-014-10	8
01-030-019-00	9
01-031-031-00	10
01-034-009-00	11
01-034-014-10	12
01-034-055-00	13
01-034-067-00	14
01-034-087-00	15
01-034-108-00	16
01-035-015-00	17
01-035-020-20	18
01-035-030-00	19
01-035-044-00	20
01-035-044-10	21
01-120-004-00	22
01-120-010-00	23
01-120-031-00	24
01-120-032-00	25
01-220-010-00	26
01-250-001-00	27
01-300-004-00	28
01-320-020-00	29
01-320-021-00	30
01-370-016-00	31
01-740-009-00	32
02-001-012-31	33
02-003-018-00	34
02-005-004-20	35
02-007-025-00	36

At the bottom of the Table view, it says "(0 out of 836 Selected)".

Figure 4.12: Forfeiture Table Added

---

## Add Parcels Layer to the Map

Add ACParcelsCombined to the map to provide parcel geometry and attributes

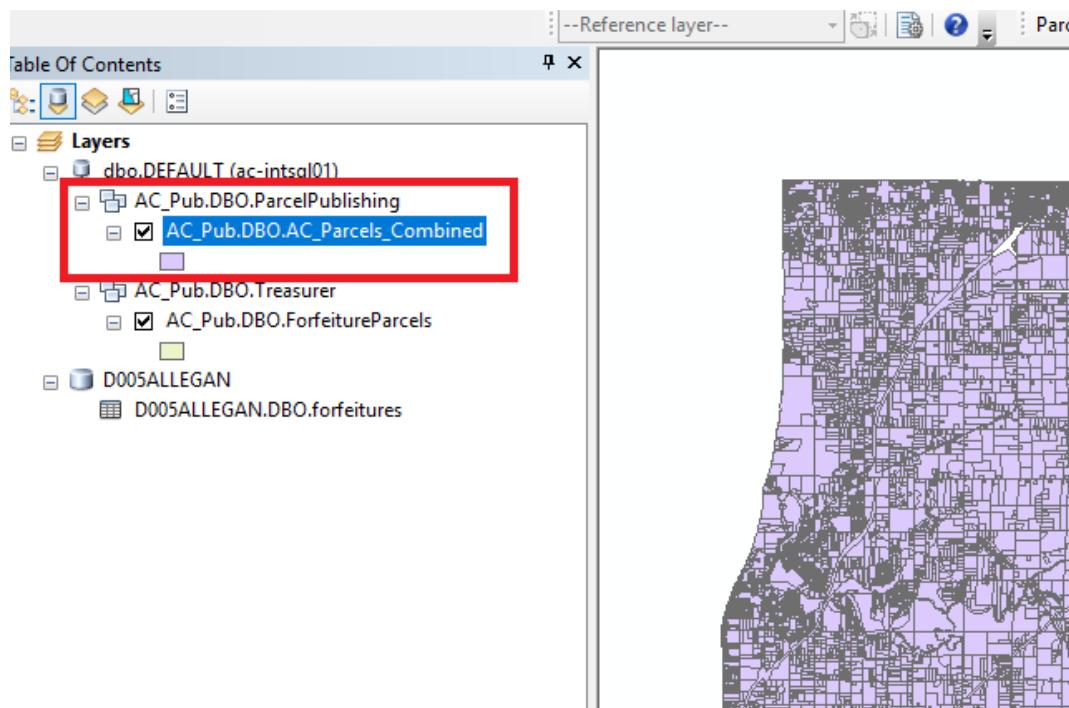

Figure 4.13: Parcels Layer Added

## Create Join

Create new join to *ACParcelsCombined* of forfeitures on parcel numbers

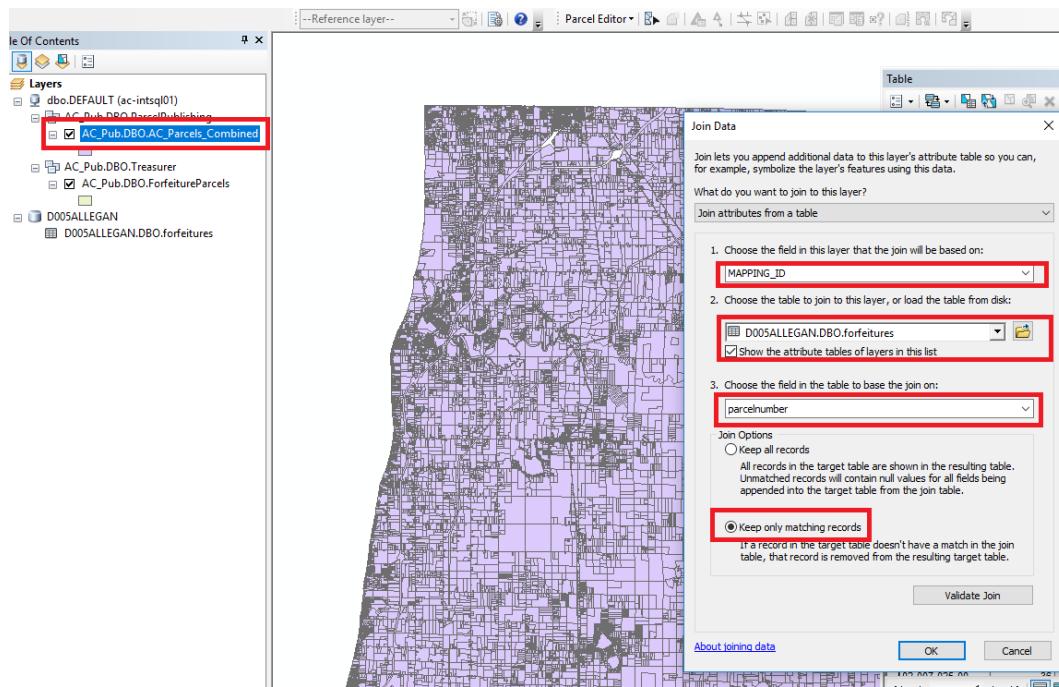

Figure 4.14: Join Parcels

## Export Joined Features to a temp location

- Right click  on joined feature class in TOC and choose export

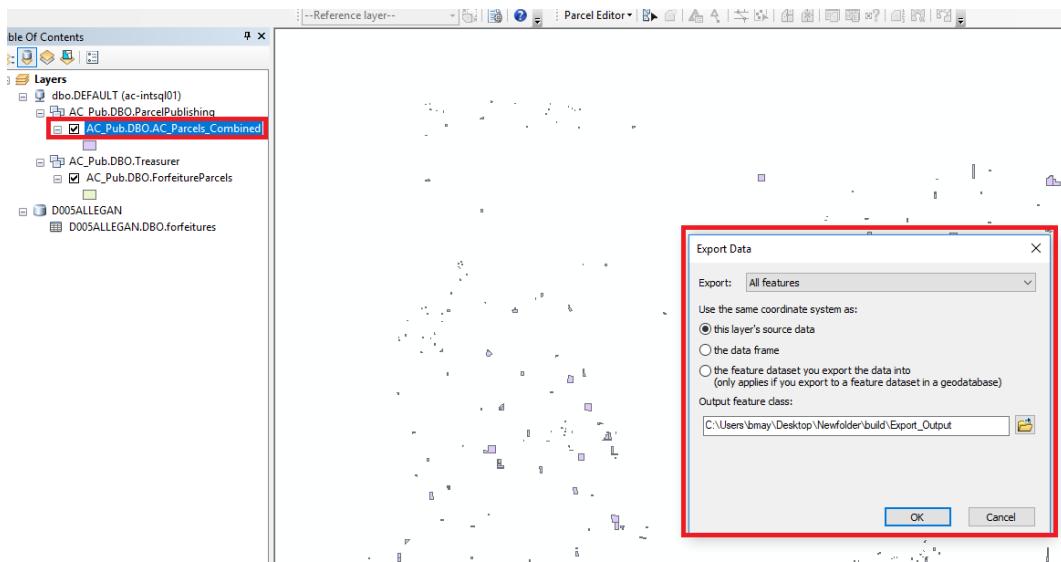

Figure 4.15: Export Joined Features

choose location and Push 

## Load data from temp location to forfeitureParcels

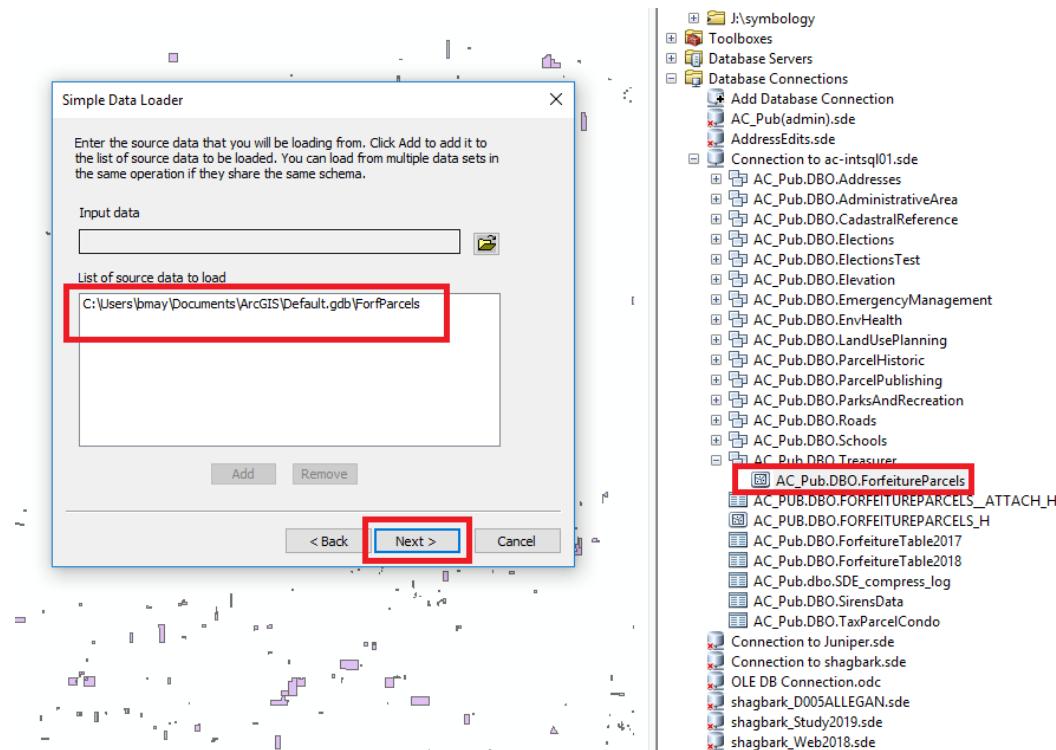

Figure 4.16: Load Data 1

Push **Next**

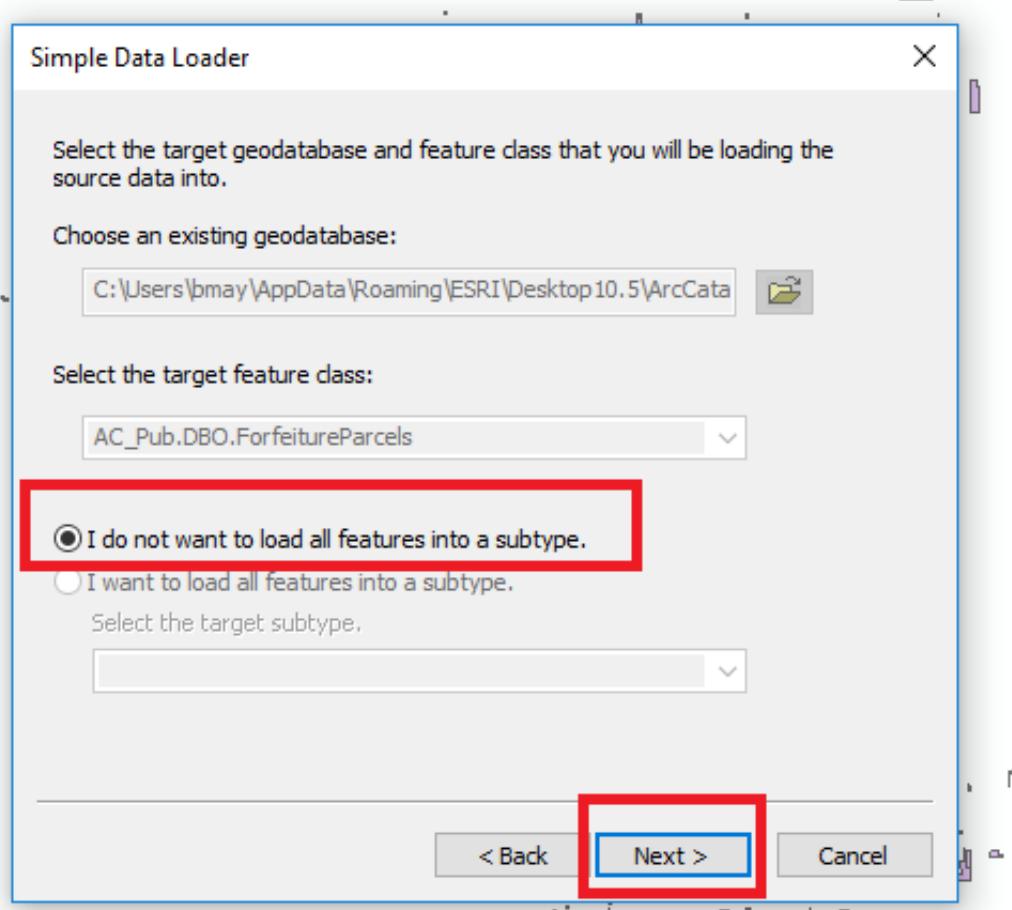

Figure 4.17: Load Data 2

## Match these fields

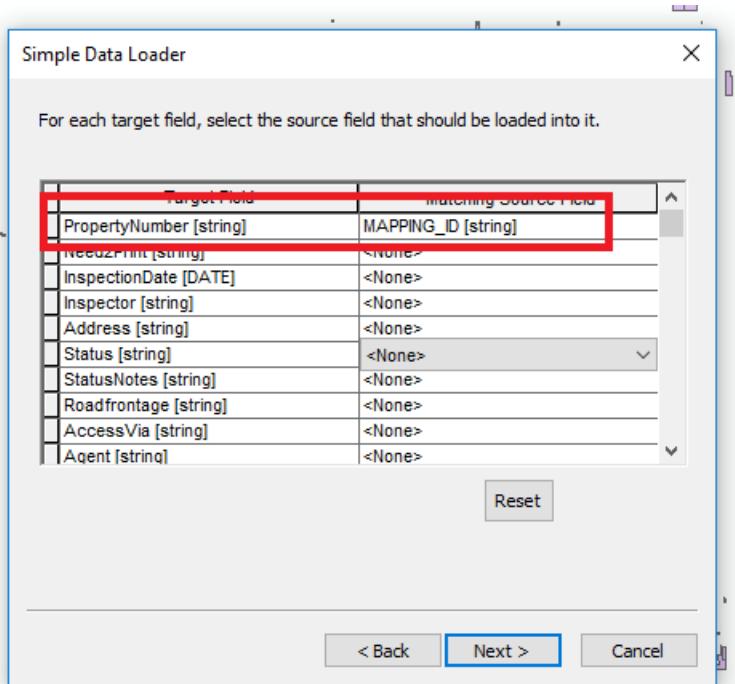

Figure 4.18: Match Fields 1

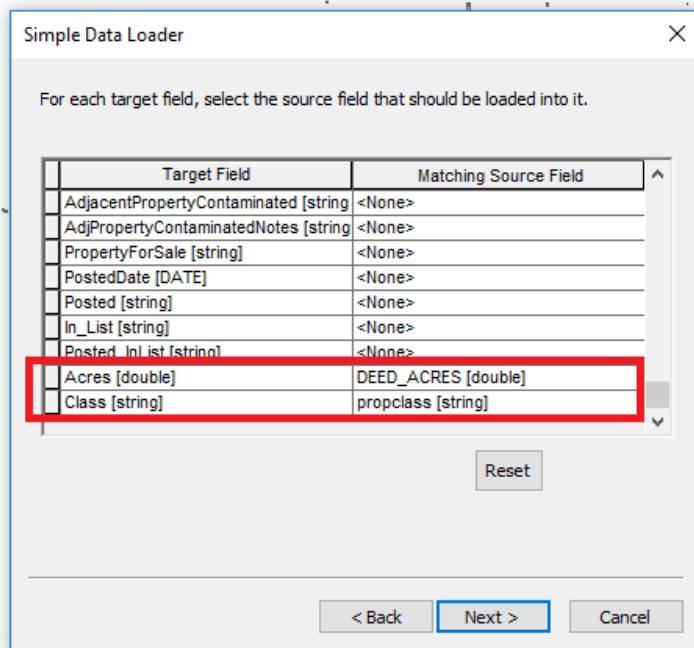

Figure 4.19: Match Fields 2

Push **Next**

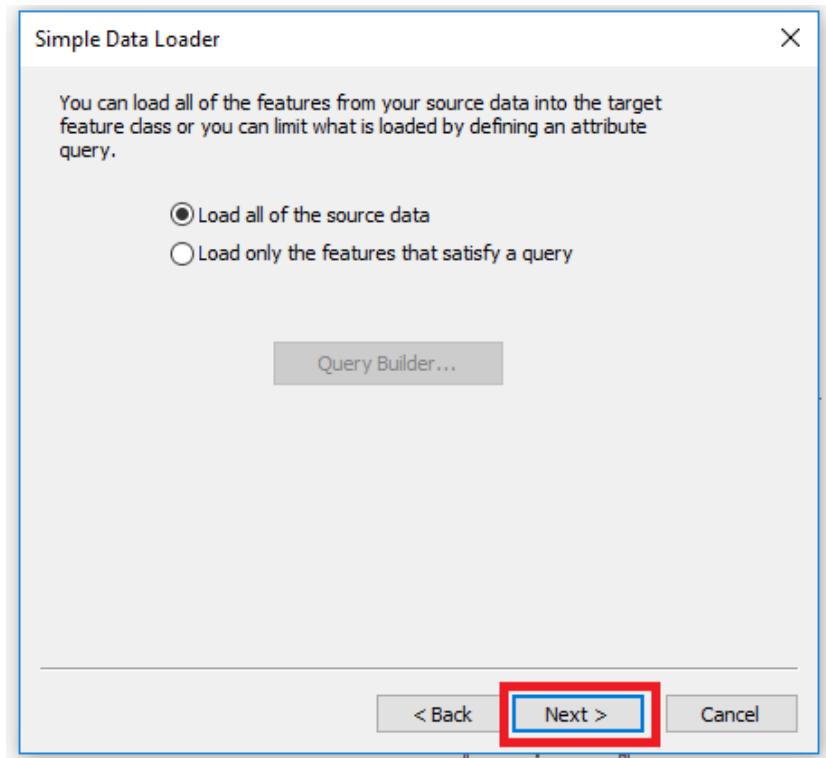

Figure 4.20: Load Data 3

Push **Finish**

## Data Setup

Register as versioned and Add Global IDs

Right Click ➔ Manage ➔ Register as Versioned

and

Right Click ➔ Manage ➔ Add Global IDs

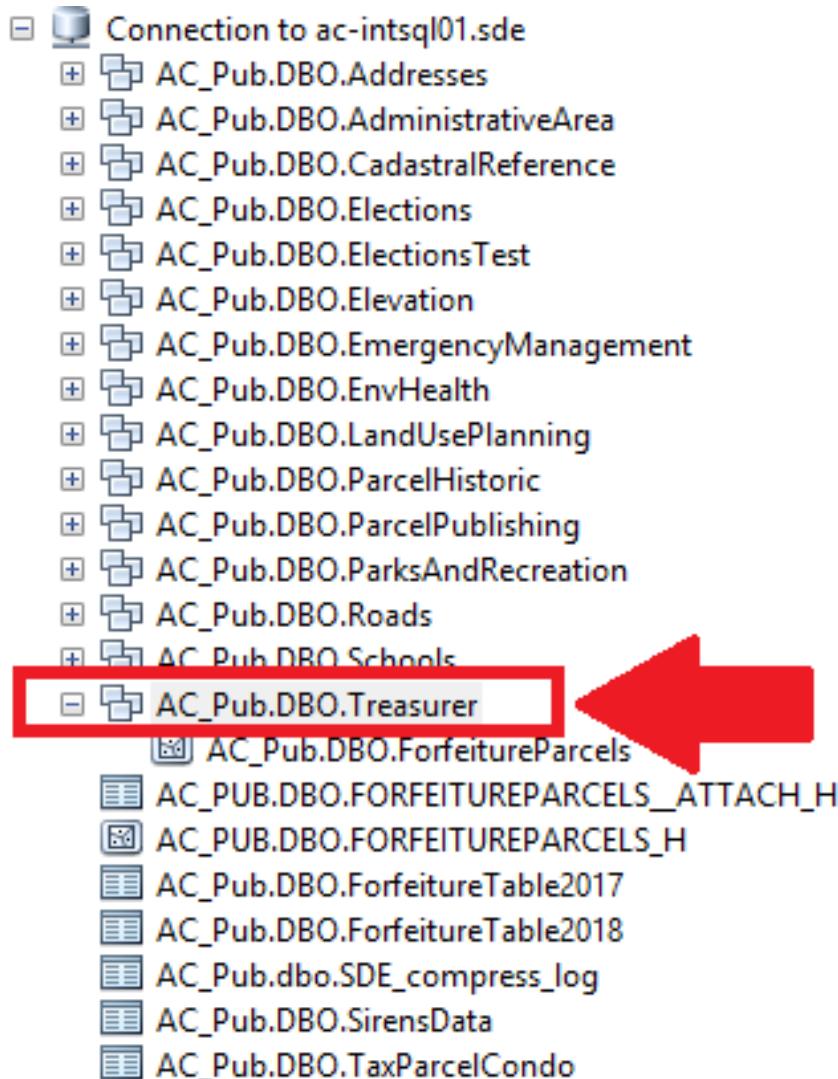

Figure 4.21: Setup Data

---

## Create Attachments

Right Click ➔ Manage ➔ Add Attachments

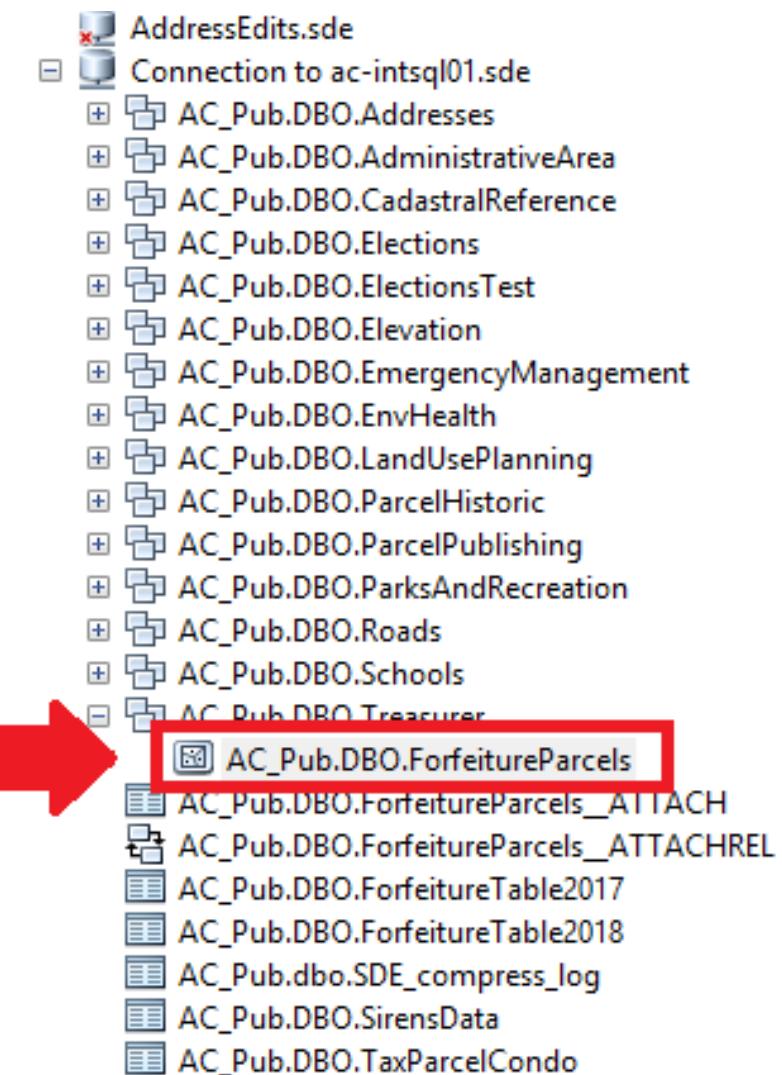

Figure 4.22: Create Attachments

## Setup Users in ArcGIS

Users that will run Pre and Post processing scripts must be created and given privileges on ACpub Treasurer Feature Data Set.

For any new users of the geoprocessing tools:

Use the create Database User tool

or

In Catalog ➔ Right click on ACpub ➔ Administration ➔ Add User

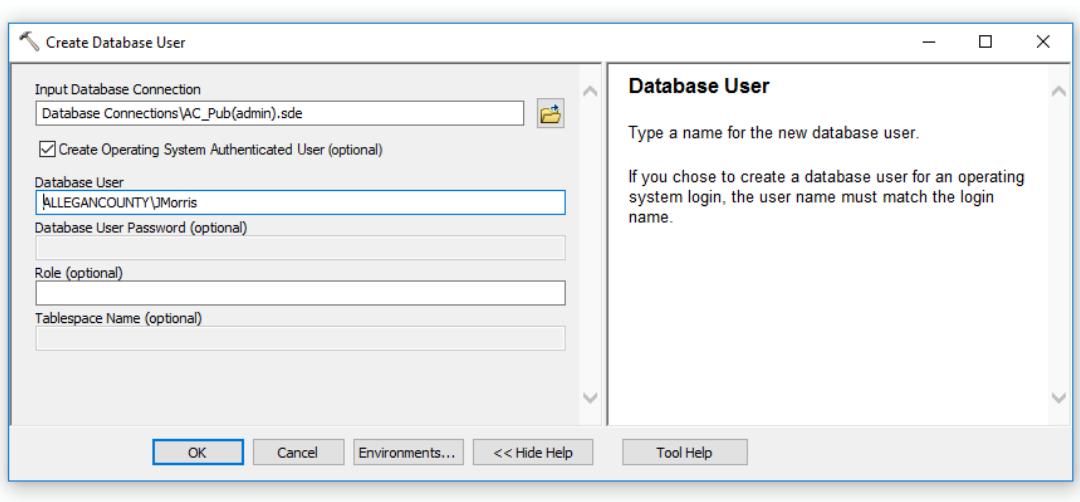

Figure 4.23: Add Db User

## Add New User to Feature Dataset

In Catalog, ➔ right click on Treasurer Feature Data Set

➔ Manage ➔ Privileges ➔ Add ➔ Type new user ➔

Push **OK**

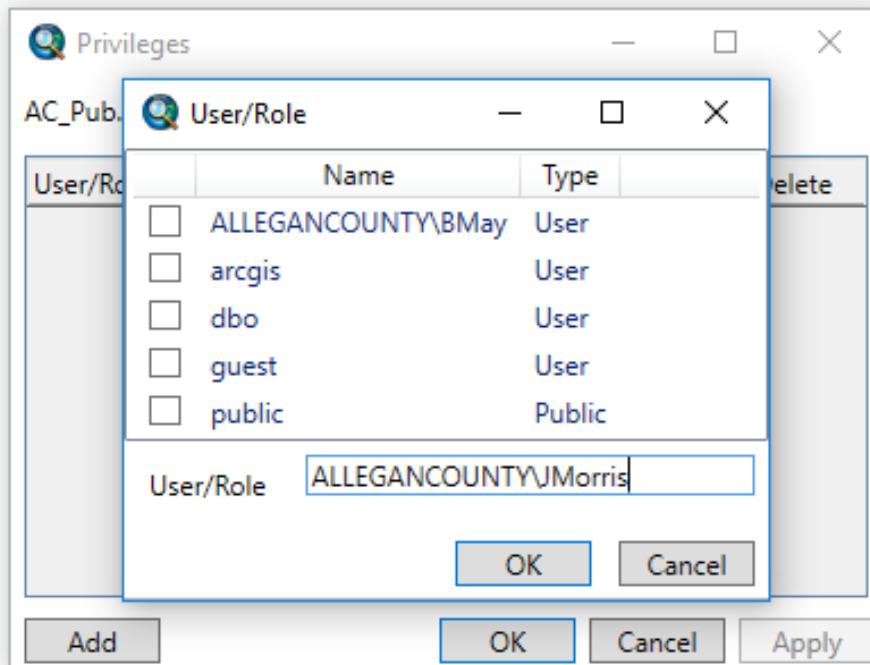

Figure 4.24: Add Feature Dataset User

## Extend Privileges for New User

In Catalog ➔ right click on Treasurer FDS ➔ Manage ➔ Privileges ➔ check boxes

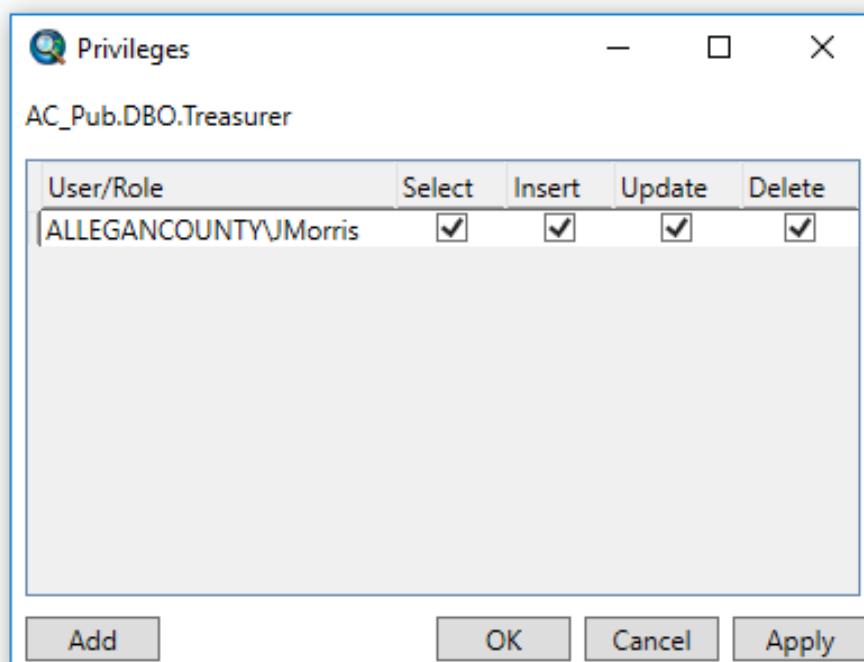

Figure 4.25: Extend Feature Dataset Privileges

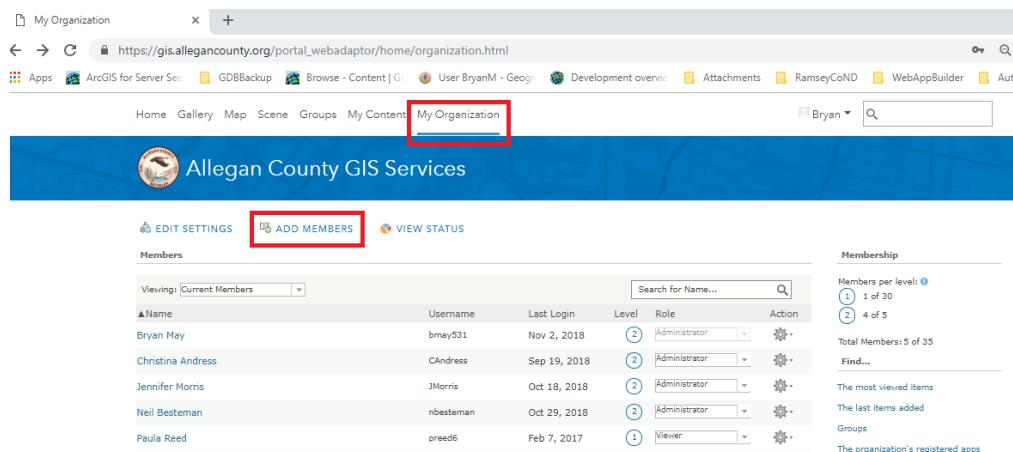

---

## Setup Users in Portal for ArcGIS

Users that will use the Collector for ArcGIS must have profiles added to and managed in the Allegan County GIS Portal site.

In Portal,  My Organization

Push **Add Members**

The screenshot shows the 'My Organization' page of the Allegan County GIS Services portal. At the top, there is a navigation bar with links for Home, Gallery, Map, Scene, Groups, My Content, and My Organization. The 'My Organization' link is highlighted with a red box. Below the navigation bar is the Allegan County GIS Services logo. In the center, there are three buttons: 'EDIT SETTINGS', 'ADD MEMBERS' (which is also highlighted with a red box), and 'VIEW STATUS'. To the left, there is a table titled 'Members' showing current members with columns for Name, Username, Last Login, Level, Role, and Action. To the right, there is a sidebar titled 'Membership' showing member counts and links for Find, Total Members, and Groups.

Name	Username	Last Login	Level	Role	Action

Figure 4.26: Portal Add User 1

## Add Members to Portal

### Select Built in Member

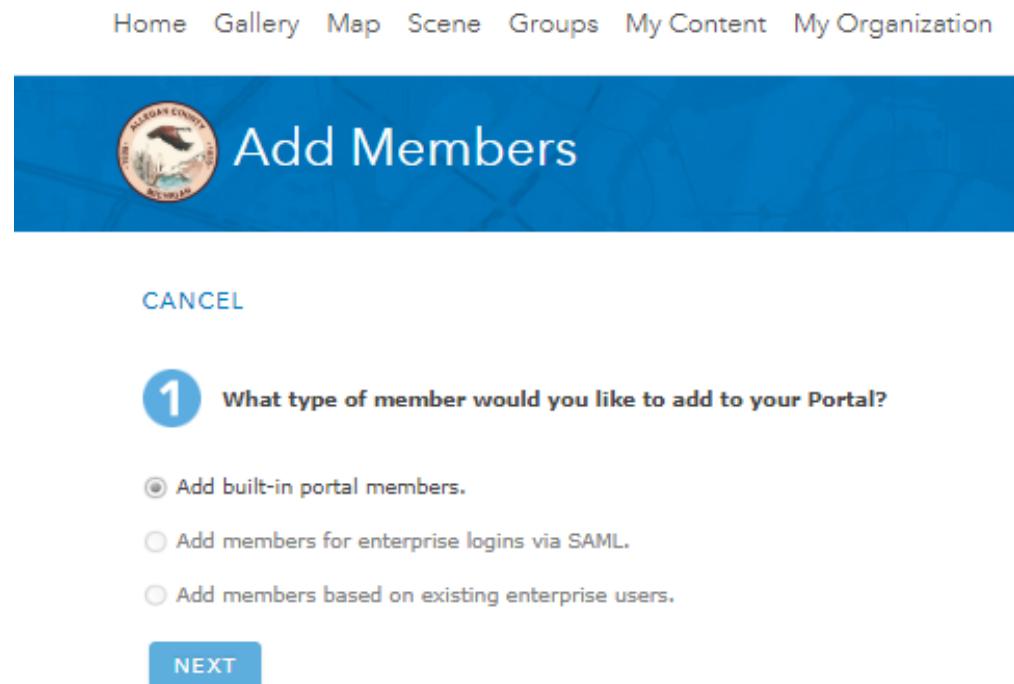

Figure 4.27: Portal Add User 2

Push **Next**

## Enter required info

The screenshot shows a web-based application titled "Add Members". At the top left is the Allegan County GIS Services logo. Below the title, there is a note: "Create new Allegan County GIS Services logins one at a time or in batch from a file. Select any role for the member to be a part of. You must inform the member of their user name and password. If you do not have an email address for a particular user, use the administrator's email address." A red error message "Password may not be less than 8 characters." is displayed above the password field. There are two tabs at the top: "One at a time" (selected) and "From a file". The form fields include: Email (text input), First Name (text input), Last Name (text input), Username (text input), Password (text input), Level (radio buttons 1 and 2, with 2 selected), and Role (dropdown menu set to "Publisher"). At the bottom are three buttons: "BACK", "ADD ANOTHER" (green), and "REVIEW ADDITIONS" (blue).

CANCEL

**2** Create new Allegan County GIS Services logins one at a time or in batch from a file.  
Select any role for the member to be a part of. You must inform the member of their user name and password. If you do not have an email address for a particular user, use the administrator's email address.

Password may not be less than 8 characters.

## Preprocessing Routine

Each day the data must be prepared by executing the tool:

### 1. Preprocess

#### What the tool does:

- Exports current forfeiture list from BSA
- Updates webmap layers with results from BSA export

To use the preprocess tool:

In the Catalog window, navigate to:

J:\Departments\Treasury\Apps\Forfeiture\processing\ForfeitureToolbox.tbx

.

Open the toolbox ➔

1.Preprocess ➔

# — 5 — Tools

## 5.1 CORE DATA

### 5.1.1 GIS DATA MAINTENANCE

#### TOOL SUMMARY

## Background

Allegan County GIS Services works with various stakeholders to maintain authoritative data. Often mapping requests involve data maintenance and sometime require data schema alterations.

## Why is the Tool Needed

Though the variety of GIS data input and maps output required of the different stakeholders varies and is extensive, general workflow details can be synchronized. It is important that this workflow be platform in-

dependent and therefore may be described in somewhat general terms.

## Who is the Tool For

Allegan County GIS Services staff.

## Takeaways

This general workflow can be used to maintain authoritative data and fulfill mapping requests efficiently. This documentation will assist in evaluating and executing mapping requests that involve any core data edits.

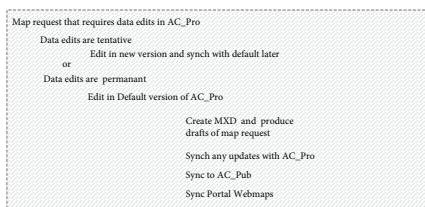

Figure 5.1: Workflow Summary

Place Target Point  
Update Target Point attributes to associated fabric point OID  
Push move point button  
Zoom to Control point  
Open maintain control point tool  
Select control Point  
edit button  
copy x and y value from  
identify tool x and y of points  
update button

## 5 . 2 C O R E D A T A S C H E M A

### P R O B L E M A N D A N A L Y S I S

#### Background

Allegan County GIS Services builds and maintains the geographic dataset used in workflows in and out of county government.

#### Statement of Problem

Geographic data must be both maintained and shared. Data is maintained

by Equalization and GIS Services. Data is shared with EH, EQ, Dispatch and the public.

#### Analysis

Here is where analysis of this problem goes

### 5.4.3 ENTERPRISE GEODATABASE MAINTENANCE

#### ENTERPRISE GEODATABASE COMPRESSION ROUTINE

#### Disconnect All Users

To disconnect the GIS Server, stop all services

- In ArcGIS Server Manager ⇒ Site ⇒ GIS Server ⇒ Machines ⇒ Stop all Services

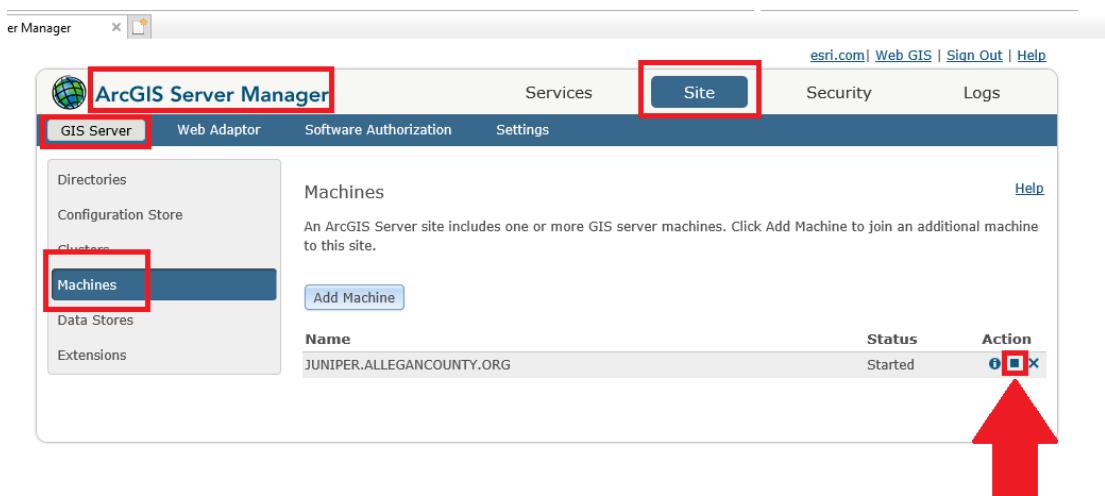

Figure 5.15: Stop ArcGIS Server

Use the Search tool to find the Rebuild Indexes Tool

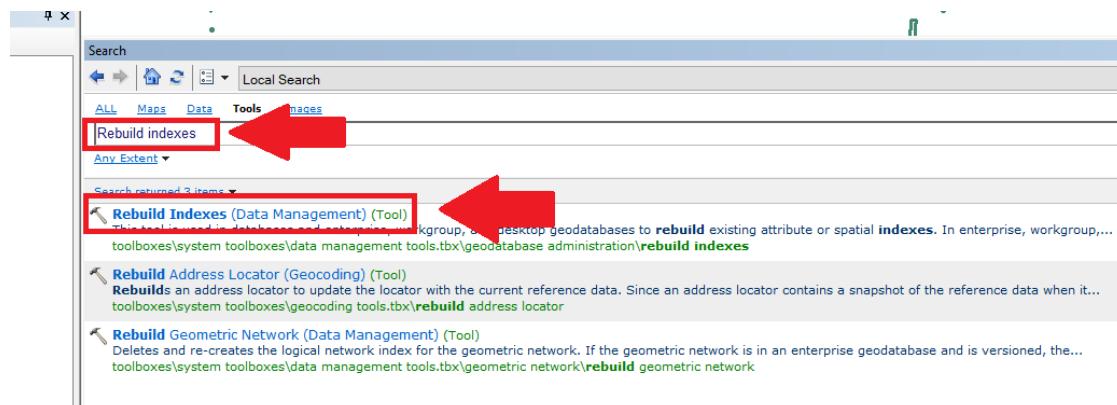

Figure 5.16: Find Rebuild Indexes Tool

## Rebuild Indexes

Select Connection ⇒ Include System Tables ⇒ Select All ⇒ Press OK

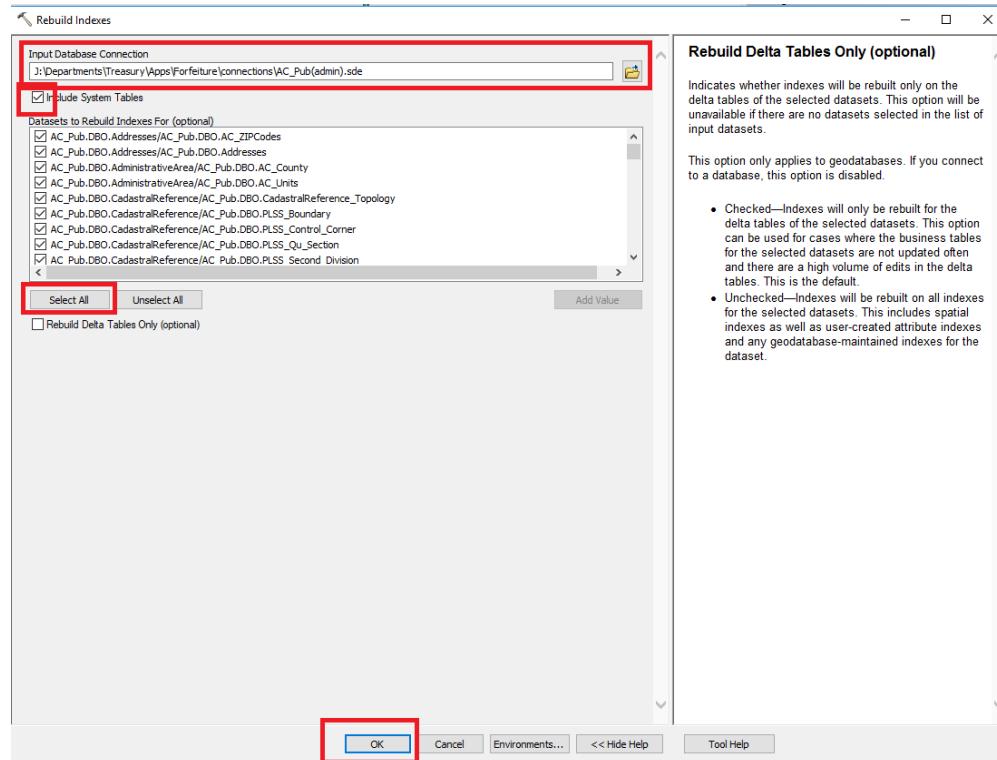

Figure 5.17: Rebuild Indexes Tool Operation

## Recalculate Statistics

In the Analyze Datasets Tool:

Select Connection ⇒ Include System Tables ⇒ Select All ⇒ Press OK

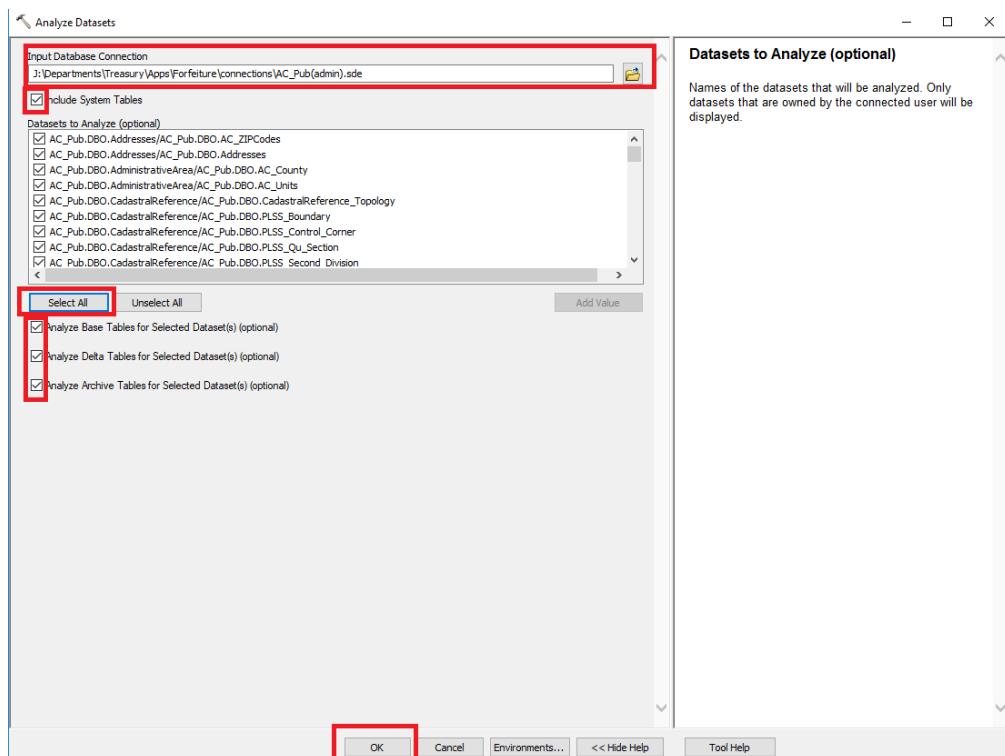

Figure 5.18: Recalculate Statistics

## Compress

Select Connection ⇒ Press OK

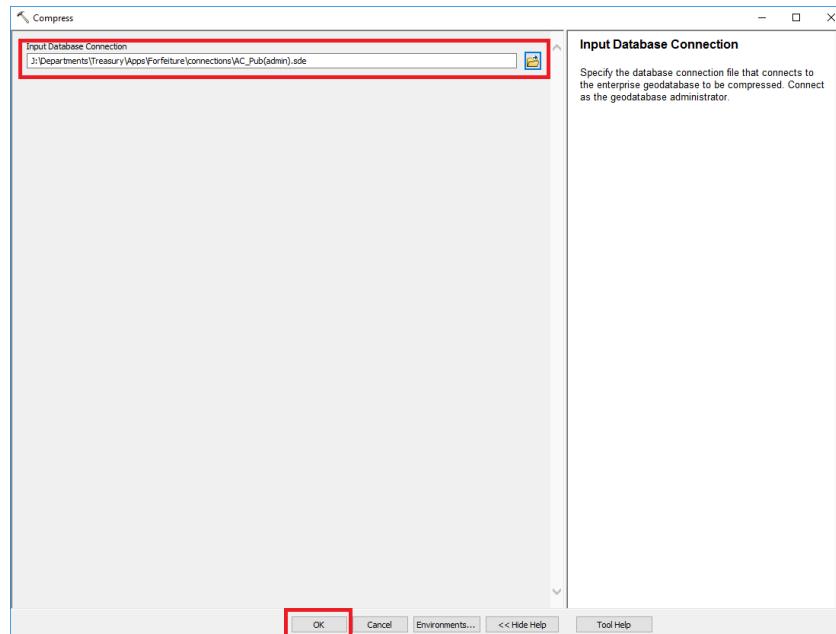

Figure 5.19: Compress

## Rebuild Indexes Again

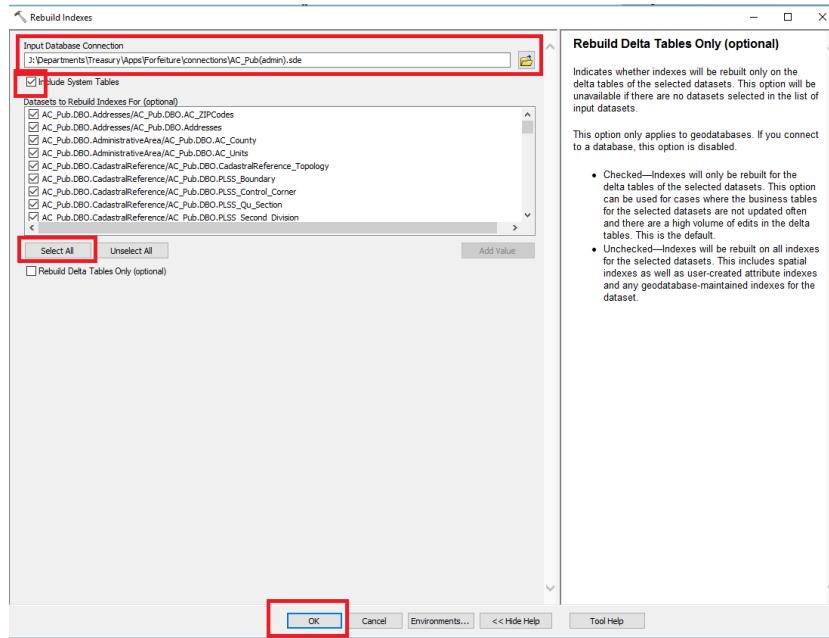

Figure 5.20: Rebuild Indexes Tool Operation

## Recalculate Statistics Again

In the Analyze Datasets Tool:

Select Connection ⇒ Include System Tables ⇒ Select All ⇒ Press OK

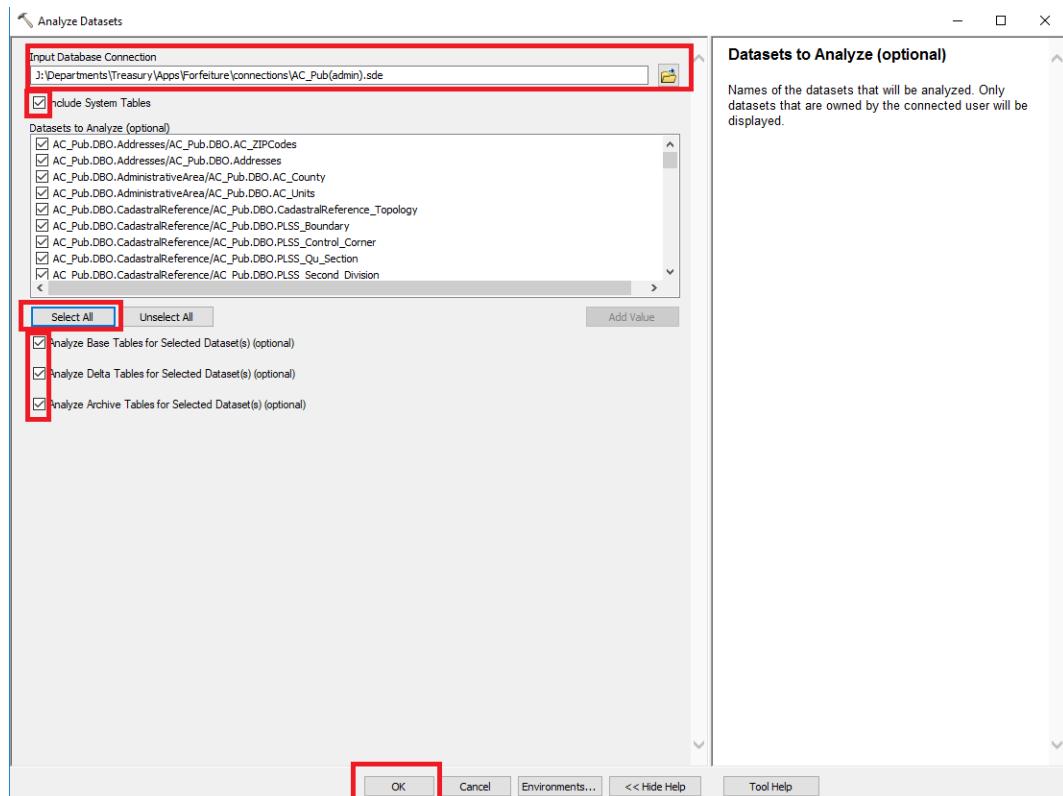

Figure 5.21: Recalculate Statistics

#### 5.4.4 MANAGING MAP SERVICES

##### TO STOP ARCGIS SERVER

## Launch ArcGIS Server Manager

Site ⇒ GIS Server ⇒ Machines ⇒ Stop the Server

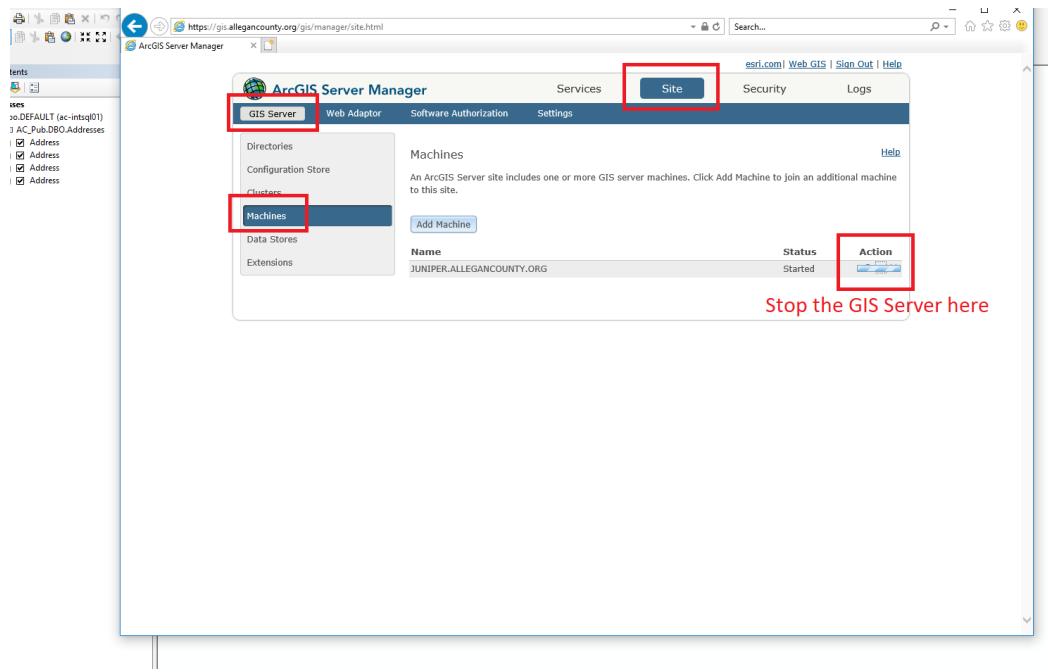

Figure 5.22: Stop the GIS Server

## F I X I N G D A M A G E D S E R V I C E S

### Error:

Service is currently being configured by another administrative operation

### Remedy:

This tech support article applies:

<https://support.esri.com/en/technical-article/000015549>

There are at least 2 ways to fix:

- Use the ArcGIS Server Account Utility
- Remove Lock Files

### Use the ArcGIS Server Account Utility

#### Access the GIS Server

To Log in to Juniper

windows R ⇒ mstsc

⇒ juniper

Use personal network credentials

---

## On the GIS Server (Juniper)

In Windows Search, find:

Configure ArcGIS Server Account  
Utility

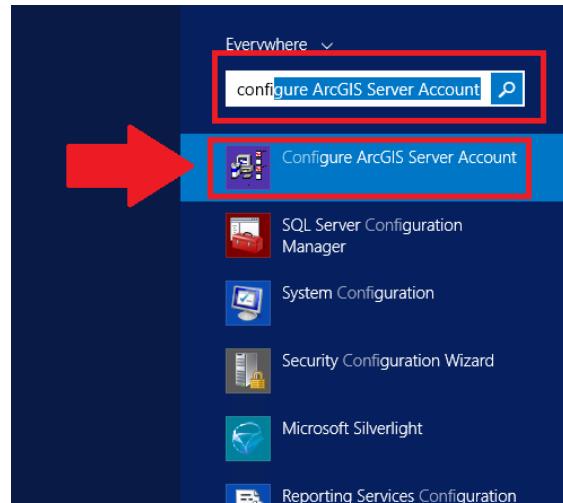

Figure 5.23: ArcGIS Server Account Utility

Use credentials:

PW: @lleganGxxxxxx

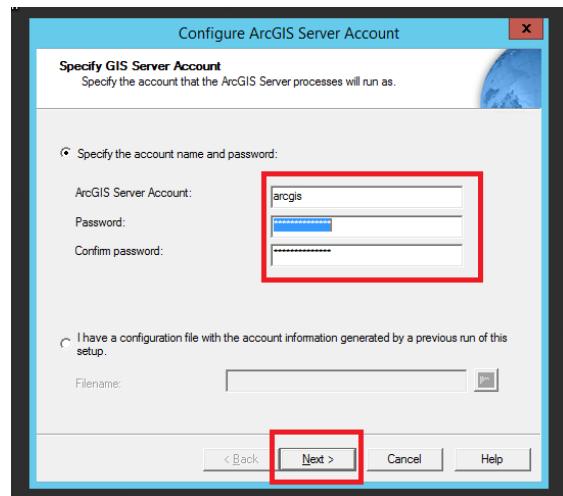

Figure 5.24: Account Utility Login

In the utility, paste these paths:

C:\arcgisserver\directories  
C:\arcgisserver\config-store  
C:\arcgisserver\logs

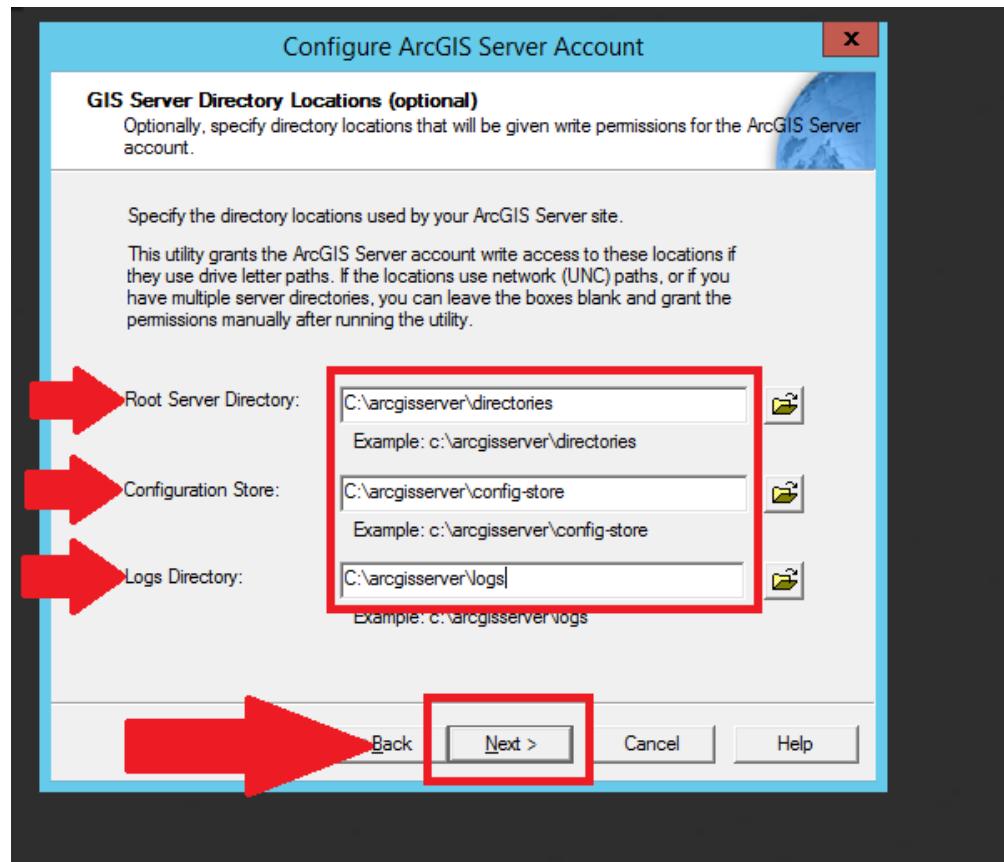

Figure 5.25: GIS Directory Locations Filled

Push **Next**

Select option **Do not export Configuration File**

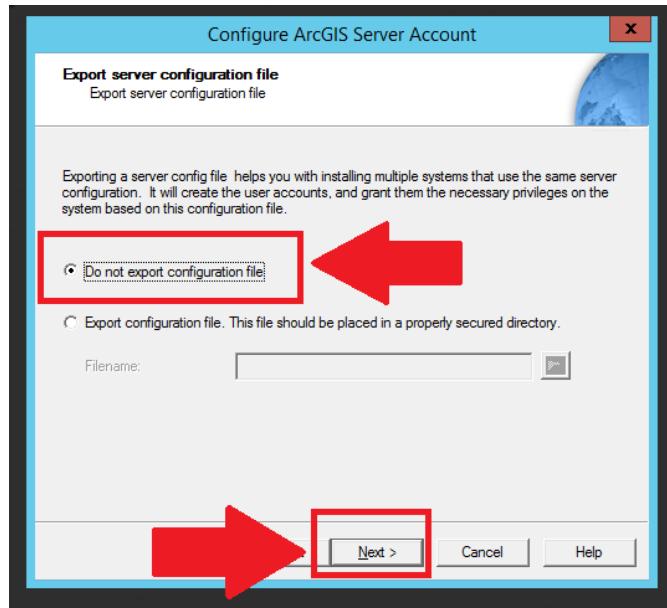

Figure 5.26: Do not Export Config File

Push **Next**

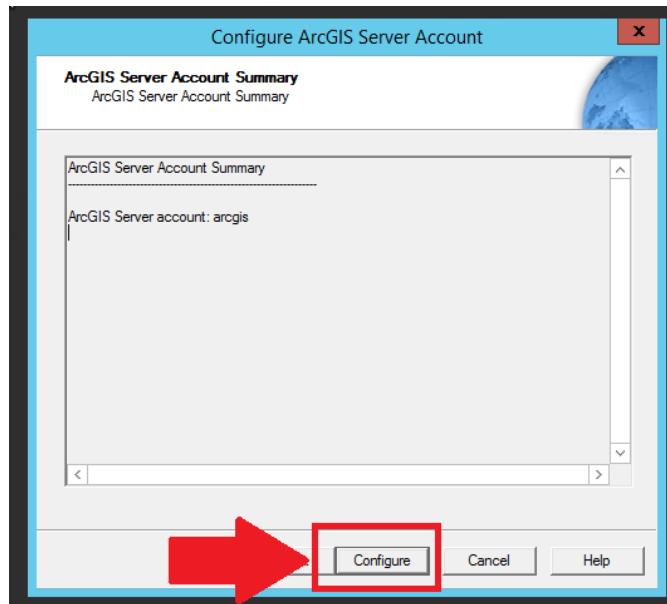

Figure 5.27: Configure Account

Push **Configure**

While the tool runs, open the service manager

In Windows Search, find: **Service Manger**

Launch **Service Manger**

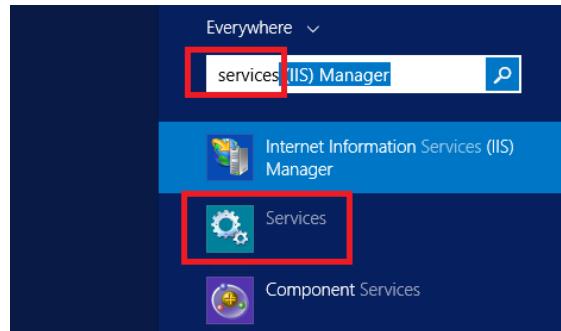

Figure 5.28: Search For Service Manager

When the tool completes,

Push **Finish**

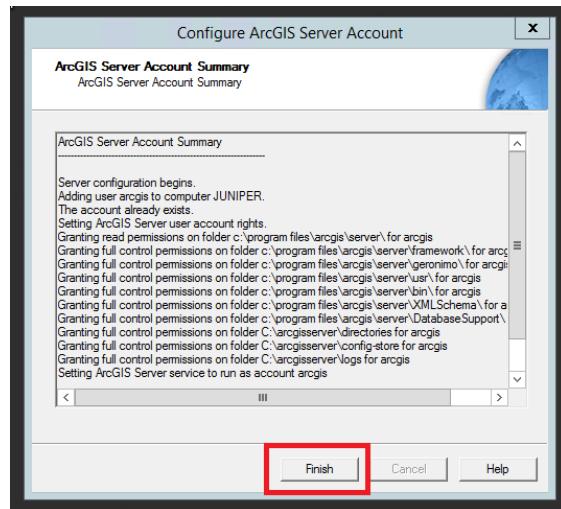

Figure 5.29: Finish On Configure

---

## Services Manager

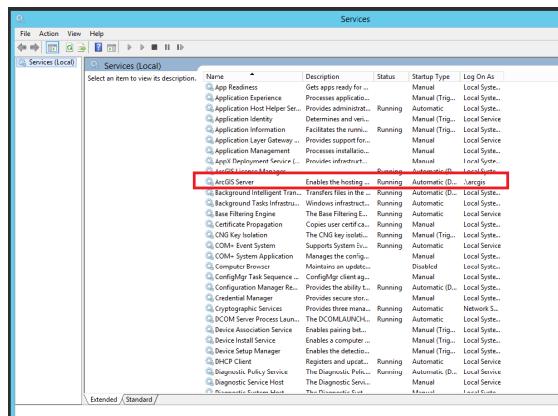

Figure 5.30: Open Services Manager

In services, select the ArcGIS Server service and restart the service. (Randy had to do this)

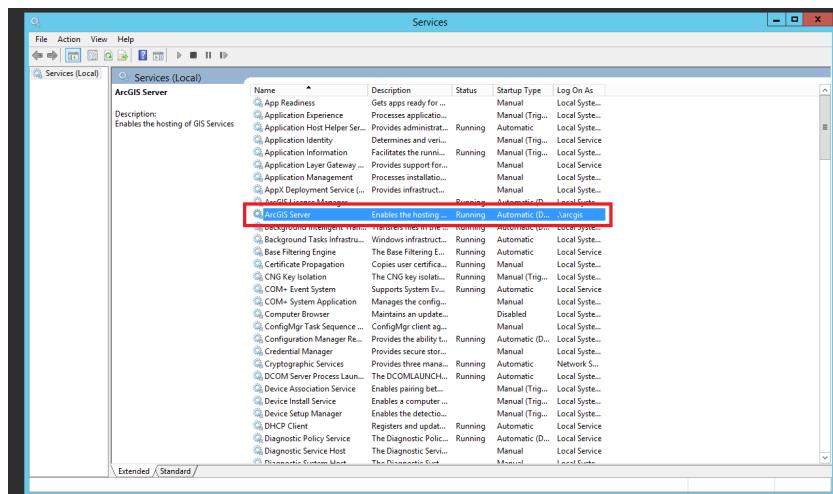

Figure 5.31: arcGis Service In Services Manager

## Quick and dirty fix

When a service get hung up in som admin process, you may get an error like:

### Error:

**Service is currently being configured by another administrative operation**

### Removing Lock Files

This may work, here is a blog about it

<https://community.esri.com/thread/103710> Network location for an example service

```
on juniper
C:\arcgisserver\config-store\services\ParcelViewer2\
PV2Adresses.MapServer\startup\JUNIPER.ALLEGANCOUNTY.ORG
```

Suggested Steps:

- 1)stop arcgis server services.
- 2)delete the lock files(\*.glock and \*.rlock )  
(in arcgisserver\config-store).
- 3) restart arcgis server service.
- 4)stop the pending stopping service and then start it.

mapservices would not stop so I try this:

<https://support.esri.com/en/technical-article/000012685>

Check permission levels for the arcGIS account ArcGisServerPermissions.PNG

---

If necessary, add the arcgis user to the permissions on the folders ArcGisServer-PermissionsAddUser.PNG

## 5.4.5 MANAGING GEODATABASE REPLICAS

### ADDING A NEW FEATURE CLASS TO A REPLICATOR

Source: <https://support.esri.com/en/technical-article/000010345>

#### Summary

Currently, there is no out-of-the-box tool to add a feature class to an existing replica. With ArcGIS Desktop, one must either recreate the replica or if the workflow allows, replicate the new feature class as a separate replica.

#### Steps:

The steps below outline how to recreate the replica using the Register Existing Data option in Desktop. These steps can be applied to both one-way and two-way replicas.

- Synchronize the changes between parent and child replica geodatabases using the existing replica so that the data is identical in each database, then Unregister the replica in both geodatabases. For two-way replicas, ensure that changes are synchronized in both directions and there are no outstanding edits before unregistering the replica.
- Create or import the new feature class into the parent geodatabase, and add the GlobalID.
- Register the newly added data as versioned.
- Copy and paste the new feature class to the child geodatabase using ArcCatalog.
- Note: that the GlobalIDs must have already been added to the feature class.
- For two-way replica or one-way full model, register the newly added data in child geodatabase as versioned.
- Using the parent geodatabase, add all the data that is to be replicated to a map in ArcMap.
- Click the 'Create Replica' tool on the Distributed Geodatabase toolbar.
- Select 'One way replica' or 'Two way replica' and click Next.
- Select 'Register existing data only'.
- Select the child geodatabase and specify a replica name.

- Click Next and click Finish.
- A new replica is created that includes the new data.

## 5.4.6 MANAGING GEODATABASE VERSIONS

### VERSION QUERIES

## SQL Queries

Four queries of SDEversions, SDEstates, sdestatelineages, and SDEcompresslog

```
use AC_Pub
select name, owner, version_id, state_id, parent_name
, parent_owner from
[AC_Pub].[dbo].[SDE_versions]
select * from [AC_Pub].[dbo].[SDE_states] order by state_id
select * from [AC_Pub].[dbo].[sde_state_lineages] order
by lineage_name,
lineage_id
select TOP(5) * from [AC_Pub].[dbo].[SDE_compress_log] order by
compress_end DESC
```

Query of SDEversions and SDEstates

```
use AC_Pub
SELECT v.version_id,v.creation_time,v.creation_time,
s.state_id, s.creation_time
FROM SDE_versions v
INNER JOIN SDE_states s ON v.state_id = s.state_id
```

---

## FINDING ORPHANED VERSIONS

### Remove orphaned versions

Follow the procedure: [Link to source](#)

Use SQL Server Management Studio to execute two queries and compare the results.

#### Step 1:

Execute the query:

```
use AC_Pub
SELECT ObjectID, name from dbo.GDB_ITEMS where
TYPE='4ED4A58E-621F-4043-95ED-850FBA45FCBC';
```

#### Step 2:

Execute the query:

```
use AC_Pub
SELECT name from [dbo].[SDE_versions]
order by name
```

---

Compare the tables

This graphic summarizes elements of the queries. Note the items from step two

```

use AC_Pub

that have no match in step one.

Orphaned versions can be removed by name in ArcGIS

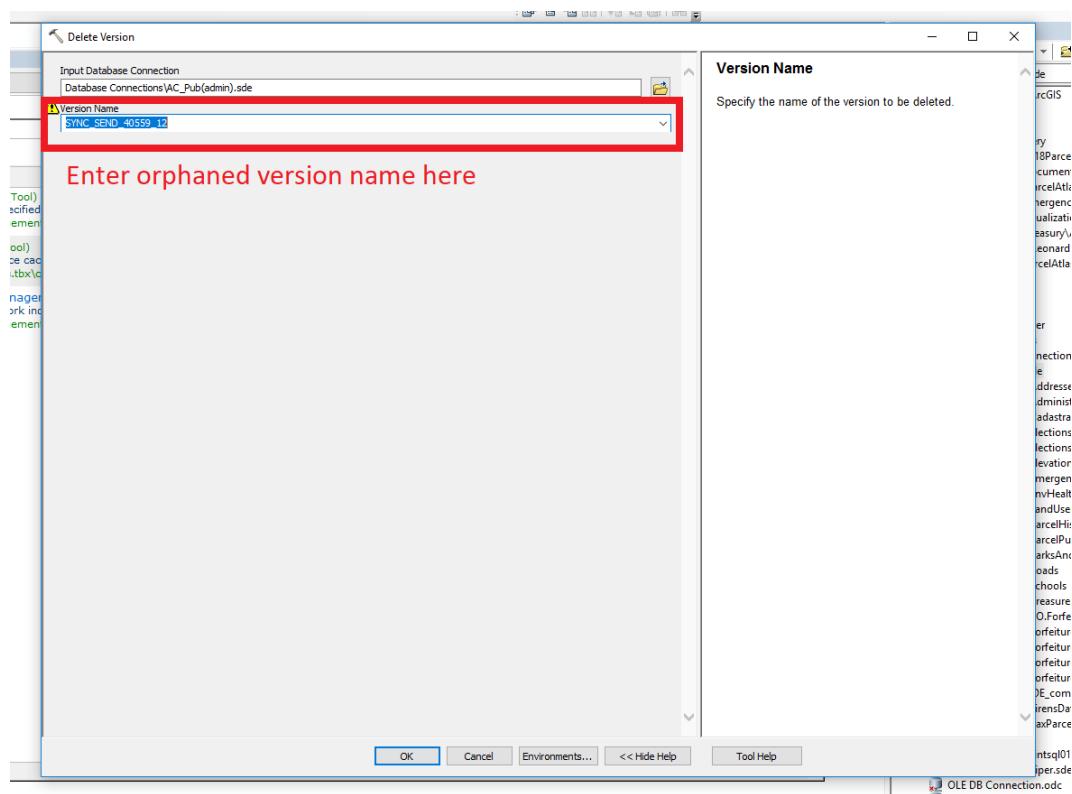

Figure 5.33: Delete Orphan Versions

## 5.4.7 MXD MANAGEMENT

### FIND / REPLACE TEXT OBJECT

#### Python Code

Python Code for finding and replacing a text object in a ArcGIS .mxd file. A snippet of this code may be found in the LayerUpdates/Zoning/processing folder. It is used to edit the .mxd files located there.

```
import arcpy
from arcpy import env

env.workspace = r"J:\Apps\Python\LayerUpdates\zoning\processing"
for mxdname in arcpy.ListFiles("*.mxd"):
    print mxdname
    mxd = arcpy.mapping.MapDocument(r"J:\Apps\Python\
        LayerUpdates\zoning\processing\" + mxdname)
    for elm in arcpy.mapping.ListLayoutElements
        (mxd, "TEXT_ELEMENT"):
        if elm.text.startswith('As ammended'):
            elm.text = elm.text.replace('As ammended',
                'As amended')
            print elm.text
    mxd.save()
del mxd
```

## 5.5 BSA SUPPORT

### 5.5.1 ADDING A LAYER TO THE BSA GIS

#### TOOL SUMMARY

##### Background

B S And A features a GIS toolset that requires data layers to be added to map documents for visualization.

B S AND A is used within Equalization and by local assessors throughout the county.

##### Why the Tool is Needed

B S And A Users often ask ACGIS for data and assistance in using the data.

##### Who the Tool is For

User knowledge of B S And A.

B S And A installed.

GIS data source files on the local machine.

##### Takeaway

With the necessary data files, any B S And A user can add layers to a map within B S And A GIS

## ADD AN IMAGERY LAYER

### Step 1: Edit GIS Settings

In **Program Setup** ⇒ Select **GIS Settings...**

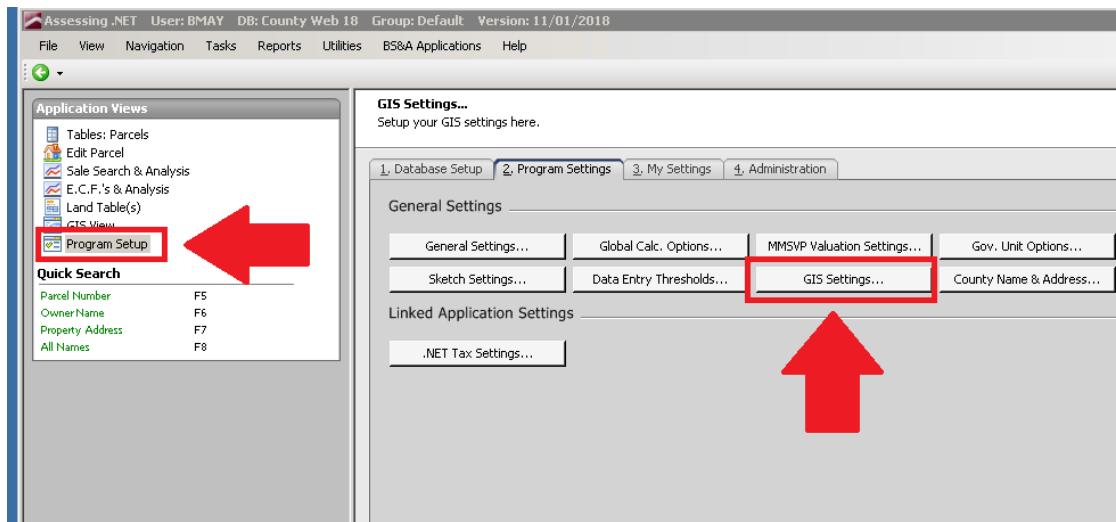

Figure 5.34: BSA Program Setup

## Step 2: Select Map To Edit

In **GIS Settings** ⇒ **Map Collections** ⇒

Double click on the map that you want to add a layer to

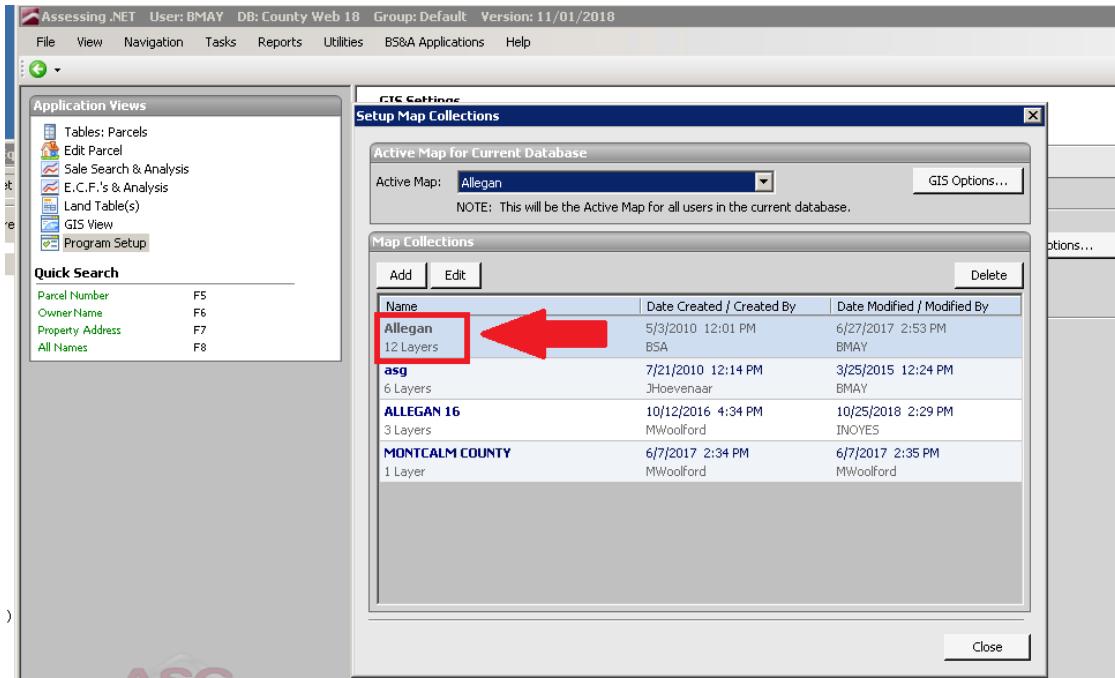

Figure 5.35: GIS Setup

## Step 3: Add Layer

Setup Layers ⇒ **Add**

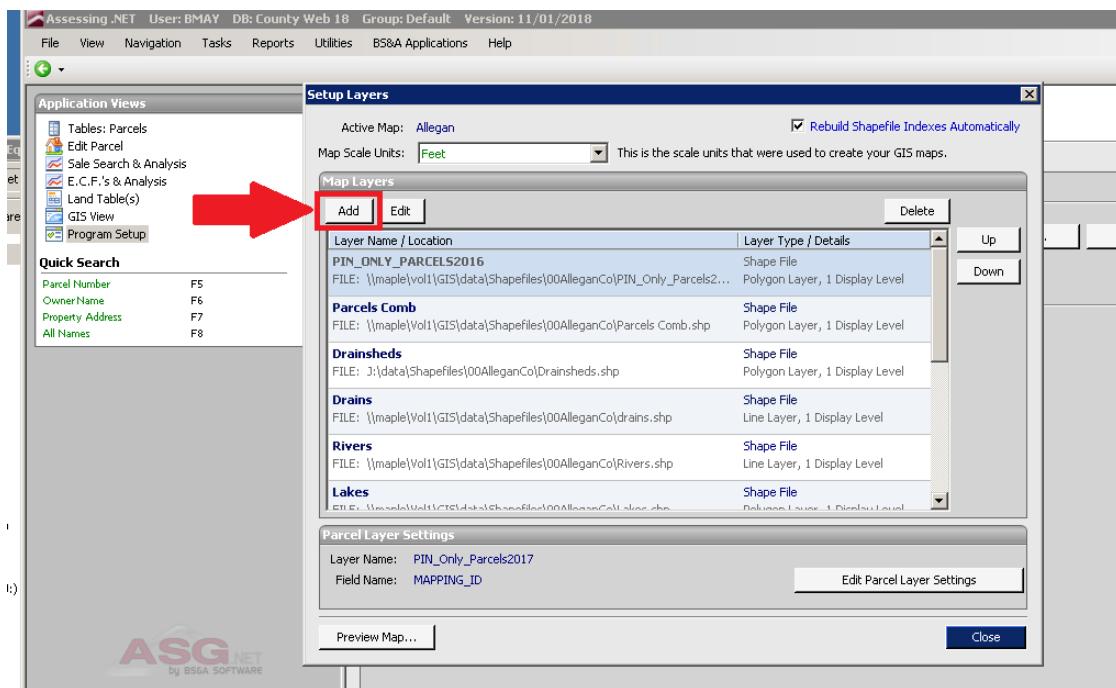

Figure 5.36: Layers Setup

## Step 4: Select Layer Type

Setup Layers → **Image** → **OK**

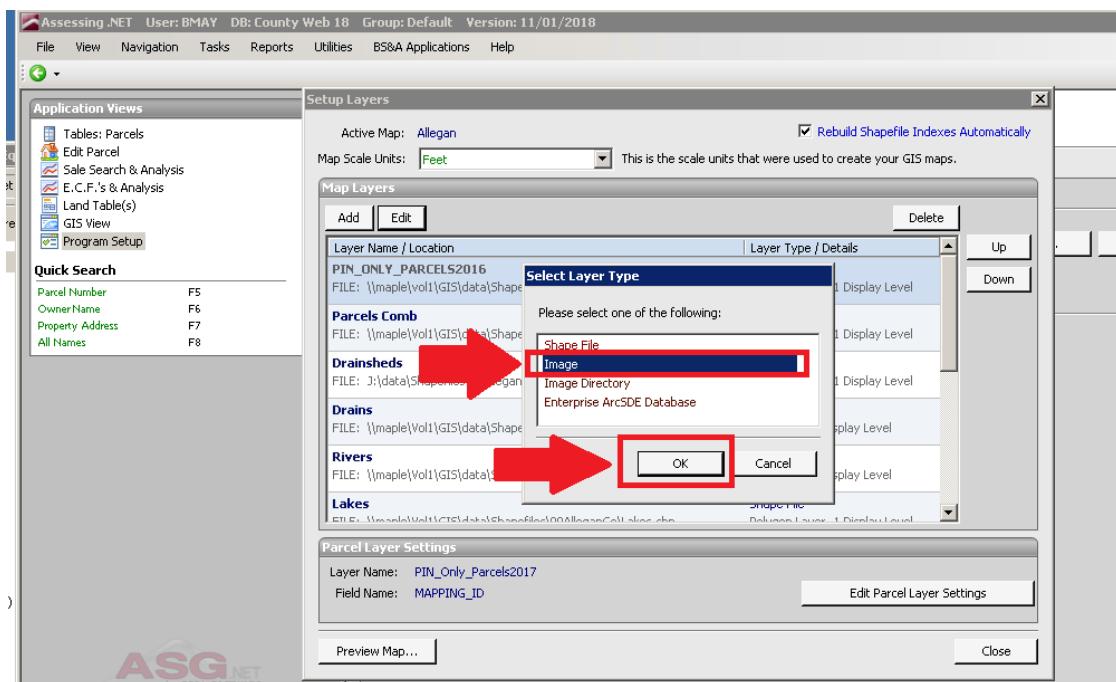

Figure 5.37: Select Layer Type

## Step 5: Add Layer From Local Drive

Navigate to Image File ⇒ **Open**

\*image files are often file type .sid

\*layer files are often file type .shp

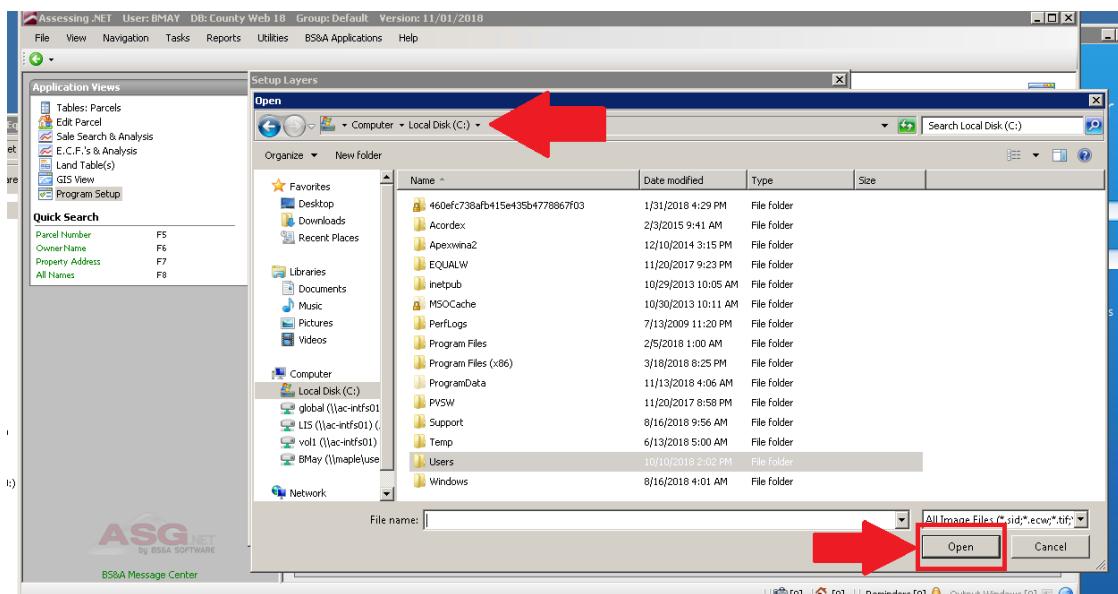

Figure 5.38: Add Layer From Drive

The new image should now be in the map

## 5.6 LATEX PACKAGES USED BY AGC GIS

### 5.6.1 COMMON ERRORS

Source:

<https://www.ocf.berkeley.edu/~latex/files/commonerrors.tex>

If you have every compiled a  $\text{\LaTeX}$  document, chances are high you have received a few error messages. Sometimes they come from something as stupid and as easy to fix as forgetting a parenthesis or forgetting to end an environment. There are also a lot more cases where you have no idea what you have done wrong and it takes you a long time to find or even understand your error.

The purpose of this is to explain some of the common errors that may happen when compiling a  $\text{\LaTeX}$  document and suggestions for what is probably going on and how to debug your document.

### THE FORM OF AN ERROR

There are two forms of errors:  $\text{\LaTeX}$  errors and  $\text{\TeX}$  errors. In both types of errors, the part after the error message will tell you where the error occurred. An example:

1.15 <offending text>

The 1.15 tells you what line the error occurred on and the text will tell you the text that caused the error.

### LATEX ERRORS

The general form of an error in  $\text{\LaTeX}$  is shown below:

! LaTeX error: <error message>

See the  $\text{\LaTeX}$  manual or  $\text{\LaTeX}$  Companion for explanation.

Type H <return> for immediate help.

...

---

The ! lets you know that the error has occurred. The error message will tell you what type of error you have committed. After the ellipses, you will find the line at which the error occurred and the text that caused the error (or at least the text where  $\text{\LaTeX}$  found the error).

## TEX ERRORS

Errors may also have the following form:

```
! <error message>
```

These errors are formatted differently because they are error messages that came from  $\text{\TeX}$  instead of  $\text{\LaTeX}$ . After the error, you will still find the line that the error occurred in and the text of the error.

## WARNINGS

There are some error messages that are just warnings and will not stop or change the compilation of the document. Chances are you have seen them many times.

## UNDERFULL

The following error results when a line does not extend the width of the page, something  $\text{\LaTeX}$  always tries to accomplish:

```
Underfull \hbox (badness 10000) in paragraph at lines  
104--107
```

This error message is just a warning and is not something to worry about. For the most part, when a line does not span the width of the page, it is because you have written something that you want to only cover part of the page.

## OVERFULL

The following error results when a line extends beyond the width of the page:

```
Overfull \hbox (16.04988pt too wide) in paragraph at  
lines 30--31 [] [] \OT1/cmtt/m/n/12 I'm trying to put  
way too much text into a line in my document.
```

---

Usually this error comes from when you are using the `verbatim` package because it will not move to the next line if your text does not go to the next line. The easiest way to fix this is to find the place in your document where this is occurring and change the text so that it fits to the page.

This error will still show up if the text is still on the page but outside of the width of text that  $\text{\TeX}$  has set. In this case, you are welcome to fix things so that the error does not show up or you can leave the text as it is.

## R E F E R E N C E S

The following warnings occur when references are changed when  $\text{\TeX}$  was compiled:

LaTeX Warning: Label(s) may have changed. Rerun to get cross-references right.

LaTeX Warning: There were undefined references.

LaTeX Warning: Reference ‘name’ on page 1 undefined on input line 15.

The way to fix these errors is to recompile the document again to correct the page numbers. Sometimes it is necessary to recompile the document twice to fix this error. You also may have defined a reference wrong, so you should check to make sure your label is correct.

## B E G I N N I N G A N D E N D I N G

### B E G I N E N D E D B Y E N D

This type of error occurs when each environment is not correctly started and ended. When you are missing an `\end` command, the following error will show up:

```
! LaTeX Error: \begin{enumerate} on input line 23
ended by \end{document}.
```

---

To fix this, you need to end the environment mentioned in the error with the appropriate command.

When you are missing a `\begin` command, the following will appear:

```
! LaTeX Error: \begin{document} ended by
\end{itemize}.
```

To fix this, you basically do the same thing as before, correctly beginning the environment mentioned in the error with the appropriate command.

## END OCCURRED INSIDE A GROUP

The following error message will show up at the end of compiling a file if an environment is begun that is not ended:

```
(\end occurred inside a group at level <n>)
```

To fix this error, make sure you end the environment that was begun. The previous error is more helpful in finding the `\begin` statement.

## ENDED BY END OF LINE

The following error will occur when you try to place a command inside a section heading:

```
! LaTeX Error: \verb ended by end of line.
```

See the LaTeX manual or LaTeX Companion for explanation.

Type H <return> for immediate help.

...

There will be many errors of the same type for this mistake. In order to find where you put the command, look in the output file and find the last heading that shows up.

---

## M I S S I N G   B E G I N   D O C U M E N T

This error is self-explanatory:

```
! LaTeX Error: Missing \begin{document}
```

## E R R O R S   U S U A L L Y   C A U S E D   B Y   B A D S P E L L I N G

### U N K N O W N   C O N T R O L   S E Q U E N C E

This error results when you use a command (something that starts with a \) that is not recognized by  $\text{\LaTeX}$ :

```
! Undefined control sequence.
```

Usually this error results from spelling a command incorrectly. Go to the line that is indicated by the error and fix the command.

## E N V I R O N M E N T   U N D E F I N E D

This error results when you begin an environment with a \begin command that is not recognized:

```
! LaTeX Error: Environment verbatim undefined.
```

Usually you have just spelled your environment incorrectly, so you just need to fix it.

## B A D   F I L E   N A M E

This error results when you have mistyped the command `latex` or do not have  $\text{\LaTeX}$  installed on your computer:

```
Bad command or file name
```

To fix this, correctly spell the command to compile your file or make sure that  $\text{\LaTeX}$  is correctly installed on your computer.

---

## C A N N O T F I N D F I L E N A M E

This error occurs when you try to compile a file that the computer cannot find:

```
! I can't find file 'sample'.
<*> sample
```

Please type another input file name:

To fix this error, make sure you have spelled the file name correctly. You also may be in the wrong directory to compile the file, so check to make sure you are in the same directory as your file.

## F A T A L E R R O R S

### R U N A W A Y A R G U M E N T

This error happens when a paragraph ends before a command's argument is done (i.e.,  $\text{\LaTeX}$  thinks that there is a missing  $\}$ ):

Runaway argument?

To fix this, you should use a different command to accomplish what you are trying to do. An example of this is to use  $\bfseries$  instead of  $\bfseries$  to make bold text in more than one paragraph.

This error can also be caused by a missing mandatory argument to a command.

## J U S T A N \*

This error normally occurs when you do not end your document with  $\end{document}$ :

\*

If you are prompted to enter something in, it is best to enter  $\end{document}$

and hope it works. Be sure to end your document with the appropriate command.

---

## E M E R G E N C Y   S T O P

This error happens when  $\text{\LaTeX}$  will stop trying to compile your document due to a serious error:

! Emergency stop.

To fix this error, you will need to figure out what caused it to stop compiling. Chance are you forgot to end your document with `\end{document}`, but there might also be another reason for the emergency stop.

## P L E A S E   T Y P E   A   C O M M A N D   O R   S A Y E N D

This error happens when your file has ended prematurely:

(Please type a command or say ‘`\end`’)

The best way to deal with this type of error is to type

`\end`

or

`\end{document}`

in the case that the absence of that command caused the error. Usually if you have ended your document correctly, the error will result from a missing } or forgetting to end a verbatim environment.

## G R A P H I C S   E R R O R S

### T O O   M A N Y   U N P R O C E S S E D   F L O A T S

This error occurs when figures or tables (i.e., floats) have not been typeset:

! LaTeX Error: Too many unprocessed floats.

$\text{\LaTeX}$  can only have so many floats waiting to be typeset. In order to fix this error, make sure that you are placing your floats where you want them (with a [h] option) and not wanting too many on one page in sequence. Using the command `\clearpage` can be very useful in distributing floats correctly.

## UNKNOWN GRAPHICS EXTENSION

The following error occurs when you try to use a type of graphic that is not supported by the type of file that you are producing:

```
! LaTeX Error: Unknown graphics extension: .gif
```

In order to fix this error, you should change your graphics to the types that are supported by the type of file you are outputting or you will need to include the correct package to deal with that type of graphic. Sometimes you may have named the graphic poorly so that  $\text{\LaTeX}$  will not recognize it as a graphic file.

## DIVISION BY ZERO

The following error occurs when the height of a graphic object is zero:

```
! Package graphics Error: Division by 0.
```

This is usually caused when you rotate an object with zero depth so that its height becomes zero. The best way to fix this is to use the keyword `totalheight` instead of `height`.

## MATH ERRORS

### DISPLAY MATH SHOULD END WITH \$\$

This error occurs when the `displaymath` or `equation` mode is ended incorrectly:

```
! Display math should end with $$
```

To fix this error, make sure that you end the `displaymath` or `equation` mode correctly (ending them with a `$` is not acceptable).

### BAD MATH ENVIRONMENT

#### DELIMITER

This error occurs when you do not have your delimiters correct in math mode:

```
! LaTeX Error: Bad math environment delimiter.
```

---

Usually this occurs when you forget to match a right delimiter with every left delimiter. This error may also happen when you forget to end an array.

## M I S S I N G R I G H T

This error occurs when you have a missing right parenthesis:

! Extra \right.

To fix this, you either need to add a \right command or you need to end an array.

## M I S S I N G D E L I M I T E R

This error message occurs when a delimiter is missing:

! Missing delimiter (. inserted).

To fix this error, you need to make sure that you have a right delimiter for every left delimiter. If you do not want a right delimiter matching a left delimiter, you need to use “.” to not have an error message show up.

## M I S S I N G \$ I N S E R T E D

The following error occurs when you try to use a character that can only be used in math mode, like \_ or ^:

! Missing \$ inserted

To fix this error, make sure you change the character to what it should be in text mode.

## T A B U L A R E N V I R O N M E N T E R R O R S

### M I S P L A C E D A L I G N M E N T T A B

#### C H A R A C T E R &

This error occurs when you use & and when you are not in a tabular environment:

---

Misplaced alignment tab character &

To fix this error, you need to use \& to make a &.

## E X T R A   A L I G N M E N T   T A B

This error occurs when you use too many tabs for the number of columns in a table:

```
! Extra alignment tab has been changed to \cr
```

The result of this error is that a new row is formed where the extra tab was. You should go back and fix your table so that the correct number of items in each row would show up.

## A R G U M E N T   H A S   A N   E X T R A   }

These errors happen when an incorrect number of arguments to a tabular environment have been specified:

```
! Argument of \cline has an extra }.
```

```
! Argument of \multicolumn has an extra }.
```

To fix this error, make sure your arguments to the tabular environment are correct.

## E R R O R S   W I T H   L I S T S

### M I S S I N G   I T E M

This error occurs when there is plain text in an environment that takes items:

```
! LaTeX Error: Something's wrong--perhaps a missing
\item.
```

To fix this error, make sure the plain text is changed into an item.

---

## T O O D E E P L Y N E S T E D

This error occurs when there are too many lists for  $\text{\LaTeX}$  to handle:

! LaTeX Error: Too deeply nested

$\text{\LaTeX}$  can only handle four levels of one type of list and six levels of different types of lists. To fix this, you need to use less levels of lists or define your own list environment.

## M I S C E L L A N E O U S E R R O R S

### O N L Y U S E D I N T H E P R E A M B L E

This error occurs when you place a command in the body of a  $\text{\LaTeX}$  document that should be placed in the preamble:

! LaTeX Error: Can be used only in the preamble.

To fix this error, just move the command to the preamble.

### T H E R E I S N O L I N E / P A G E H E R E T O E N D

This error occurs when you incorrectly use the commands that make a new line or a new page:

! LaTeX Error: There's a no line here to end.

You may just leave the command that is making a new line in place or you can take it out. Here,  $\text{\LaTeX}$  is just trying to make sure that everything looks nice.

### C O M M A N D A L R E A D Y D E F I N E D

This error occurs when you try to define a command that already exists:

! LaTeX Error: Command ... already defined.

To fix this, you need to define your command differently.

---

## M I S S I N G   N U M B E R

This error is made when a number is expected as an argument and one is not provided:

```
! Missing number, treated as zero.
```

To fix this error, you need to find where a number is expected so that you can provide the correct one.

Official hyperref package documentation

**Notes:**

- Add the *hyperref package* to the preamble **last** [2]

- To use Tex in a pdf bookmark: use

`\texorpdfstring{\\"}{}`

i.e. `\paragraph{Sample Text\texorpdfstring{\\"}{}}`

Creates a new line without an error.

---

`\usepackage[options]{hyperref}`

## S I M P L E   U S E

Use `\href{URL}{DESCRIPTION}` to add a link with description

`\href{https://www.latex-tutorial.com}{Website with tutorials}`  
produces:

[Website with tutorials](https://www.latex-tutorial.com)

## O P T I O N S

Add optional arguments to the `usepackage` line:

Useful options:

- **pdftex**  
enables other options like breaklines
- **breaklinks**  
allow links to be broken across several lines  
eg. <https://lists.gnu.org/archive/html/emacs-orgmode/2013-06/msg00776.html>
- **colorlinks**  
Colors the text of links and anchors.(default is false)
- **linkcolor**  
Color for normal internal links(default is red).
- **anchorcolor**  
Color for anchor text.
- **citecolor**  
Color for bibliographic citations in text.
- **urlcolor**  
Color for linked URLs

## U S E   W I T H   O P T I O N S

---

```
\usepackage[breaklinks,colorlinks,citecolor=blue,
urlcolor=green]{hyperref}
```

---

## C O M M A N D S

\href{URL}{text} Makes text a link to URL.

To put a file path in text:

eg:

[Official hyperref package documentation](#)

(documentation Pt.4 pg.15)

\href[options]{URL}{text}

Options:

➤ absolute

```
\href{C:/AC/jalapeno/documentation/packageDocs/hyperref2017.pdf}
    {Official hyperref doc}
```

➤ relative **Note: relative path must be from final pdf location**

```
\href{../../../../documentation/packageDocs/hyperref2017.pdf}
    {Official hyperref package doc}
```

This path works from main document

```
\href{../../../documentation/packageDocs/hyperref2017.pdf}
    {Official hyperref package documentation}
```

This path works from subsection document

\hyperref[label]{text}

Makes text a link to where \ref{label} would point.

\hypertarget{name}{text}

Sets an anchor on text with the label name.

\hyperlink{name}{text}

Makes text a link that takes you to the anchor labeled name.

Pair with \hypertarget.

\phantomsection

Used in conjunction with

\addcontentsline  
to make the correct link in the Table of Contents.

## 5 . 8 P D F T O O L S U S E D B Y A C G I S

### 5 . 8 . 1 P D F O P T I M I Z E R

#### P U R P O S E A N D S U M M A R Y

**Workflow Purpose:** Optimization of a large number of pdf docs.

**Workflow Summary:** Uses Python to create a list of .pdf docs in a folder and creates a batch file to optimize the pdfs in the list to another location. The batch process calls ghost script for the optimization.

#### R E Q U I R E M E N T S

Opensource software:

- ghostscript
- python 2.7 and a Python IDE
- A text editor

paragraphPython(2.7)

#### Note:

The output of this script is bdoc.txt, Save as a .bat to execute the optimize.

#### Script that creates a batch file

```
import os, sys

project = os.path.dirname(os.path.dirname(__file__))
processing = os.path.join(project, 'processing')
#source = os.path.join(project, 'source')
build = os.path.join(project, 'build')
sourcepdf = os.path.join(build, '20180716')

inString1 = "gswin32 -sDEVICE=pdfwrite -dCompatibilityLevel=1.4
```

---

```

-dPDFSETTINGS=/ebook -dNOPAUSE -dQUIET -dBATCH
-sOutputFile=J:\\Projects\\2018ParcelAtlas\\build\\optimized\\"

inString2 = " J:\\Projects\\2018ParcelAtlas\\build\\20180716\\"

batchdoc = os.path.join(processing,"bDoc.txt")

# Main
#####
if __name__ == "__main__":
    list1 = os.listdir(sourcepdf)
    l = open(batchdoc,'w')
    for i in list1:
        newi = i[1:]
        print newi
        t = inString1 + newi + inString2 + i + "\n"
        print t
        l.write(t)

    l.close()

```

## G H O S T S C R I P T

### About

ghostscript is used for the optimization. ghostscript is an interpreter for the PostScript language and for PDF [1].

### Licensing

ghostscript is available opensource under AGPL conditions. more information can be found [here](#).

---

## Download

ghostscript can be downloladed [here](#).

### W I N D O W S   B A T C H   F I L E S

A line from the batch file looks like:

```
gswin32 -sDEVICE=pdfwrite -dCompatibilityLevel=1.4  
-dPDFSETTINGS=/ebook -dNOPAUSE -dQUIET -dBATCH  
-sOutputFile=J:\Project\2018ParcelAtlas\build\optimized\  
02-001-001-00.pdf J:\Projects\2018ParcelAtlas\build\20180716  
\_02-001-001-00.pdf
```

## 5.9 QGIS TOOLS

### 5.9.1 QGIS AZIMUTH AND DISTANCE PLUGIN

#### TOOL SUMMARY

The Azimuth and Distance Plugin can be added to QGIS to provide COGO functionality.

#### Background

QGIS is an opensource GIS that provides additional tools through Plugin architecture.

#### Why the Tool is Needed

QGIS does not have a COGO toolset built in.

#### Who the Tool is For

A user with QGIS installed locally and the ability to make a basic map.

#### Takeaways

The Azimuth and Distance Plugin provides the COGO functionality in QGIS.

The Plugin can be installed following these steps.

## AZIMUTH AND DISTANCE PLUGIN INSTALLATION

### Install the Plugin

Plugins (1) ⇒ Topography Group

Select the Azimuth and Distance Plugin (2)

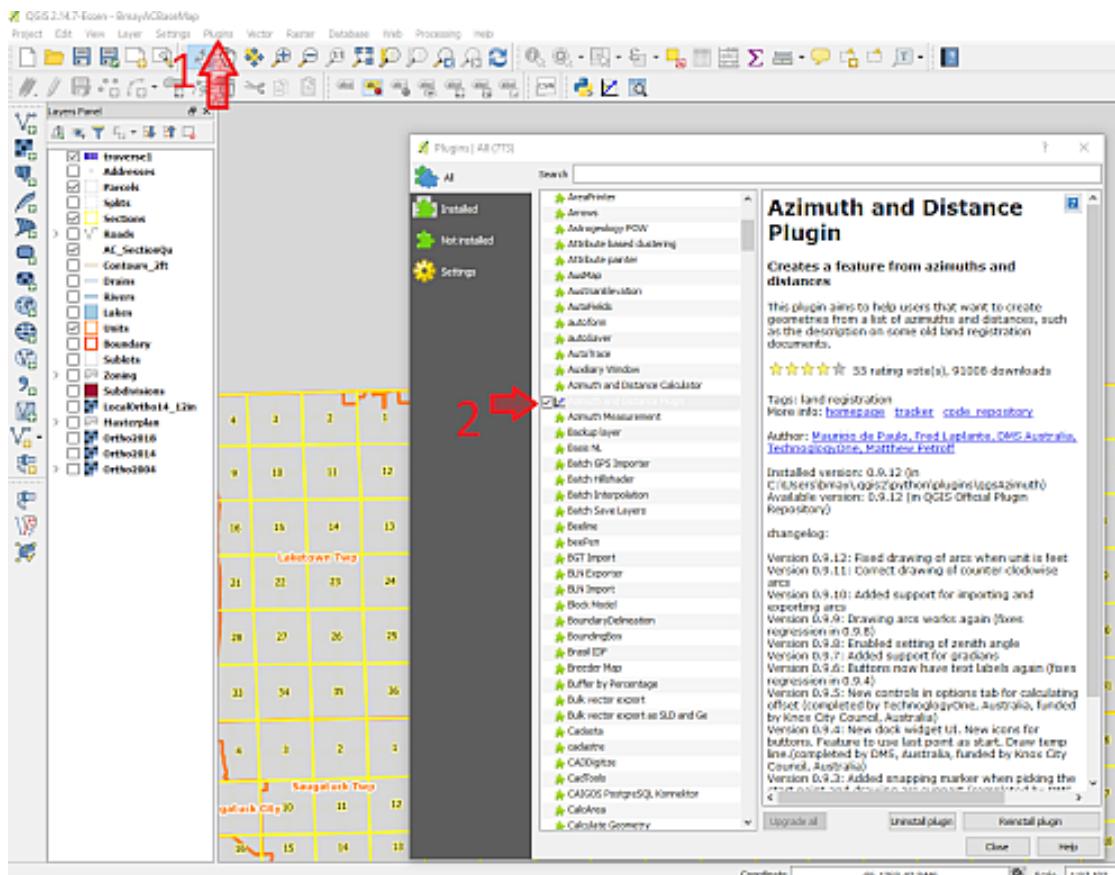

Figure 5.39: Launch Plugin

### Azimuth and Distance Plugin Tool is Added to Toolbar

Figure 5.40: COGO Icon

## 5.9.2 COGO TOOLS IN QGIS

### TOOL SUMMARY

Transfers of real property typically involve a Metes and Bounds description:

Commencing at Southeast corner of Section 1, Town 2 North, Range 11 West, Martin Township, Allegan County, Michigan; thence North 88 degrees 32 minutes 05 seconds West 1338.44 feet along the south line of said section to the point of beginning; thence North 01 degrees 27 minutes 55 seconds East 388 feet; thence South 88 degrees 32 minutes 05 seconds East 584 feet, more or less, to the centerline of the Gun River; thence southerly along said centerline to the south section line; thence West along said section line to the point of beginning.

Figure 5.41: Description From Deed

## Background

In GIS, *Coordinate Geometry* or **COGO** tools convert written descriptions of real property into digital map features.

Users in several county departments use COGO tools in their regular workflow.

The COGO tools in ArcGIS require an advanced license.

## Who the Tool is For

A user with QGIS installed locally and the ability to make a basic map.

## Why the Tool is Needed

A tool is needed to convert between written descriptions of real property and digital map data.

## Takeaways

QGIS is an open source GIS without a built in COGO toolset.

The Azimuth and Distance Plugin provides the COGO functionality in QGIS.

Following are instructions for using QGIS for COGO

---

To use COGO tools in QGIS, follow these steps

## Step 1:

### Launch and Configure the Azimuth and Distance Plugin

\*Plugin installation is covered in a separate document.

Figure 5.42: COGO Icon

\*This tool draws in a temporary layer or in an active map layer.

Select **traverse1** as active layer in the tool.

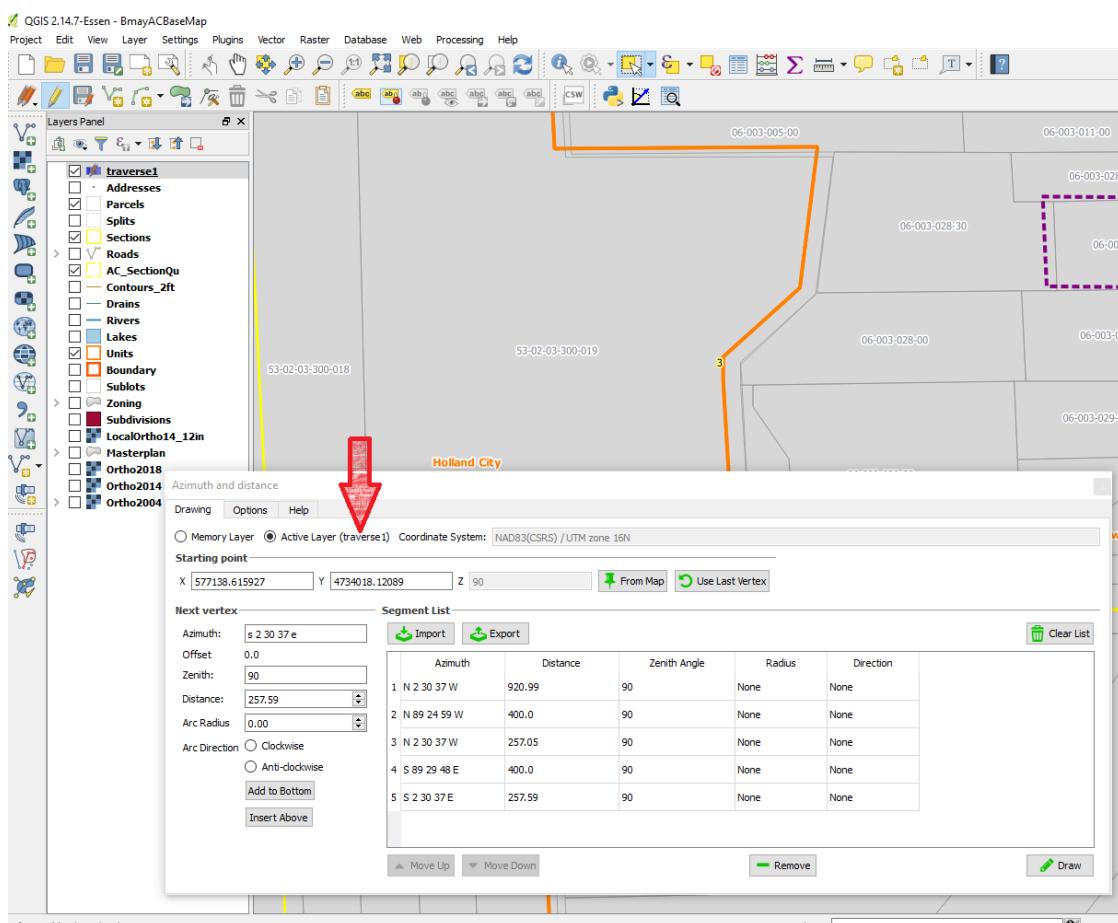

Figure 5.43: Check Active Layer

## Configure Options in Plugin

On the **Options** Tab: Select these radio buttons;

- **Boundary**
- **Bearing**
- **Feet**
- **Degree**

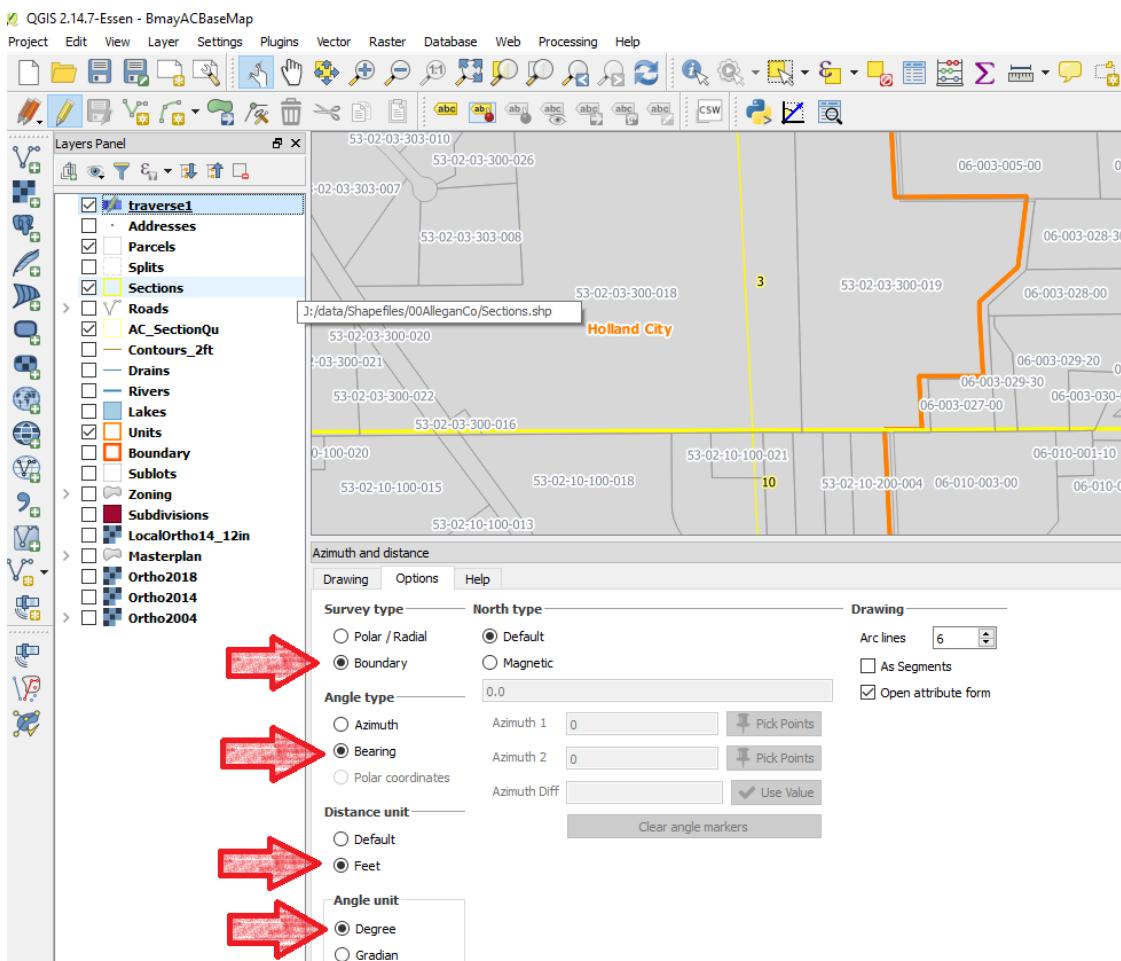

Figure 5.44: Plugin Options

## Step 2: Activate traverse layer in map

\*For a map layer to be editable, it must be activated in the Layers Panel.

(If necessary) left click the layer **traverse1** in Layer Panel to activate it.

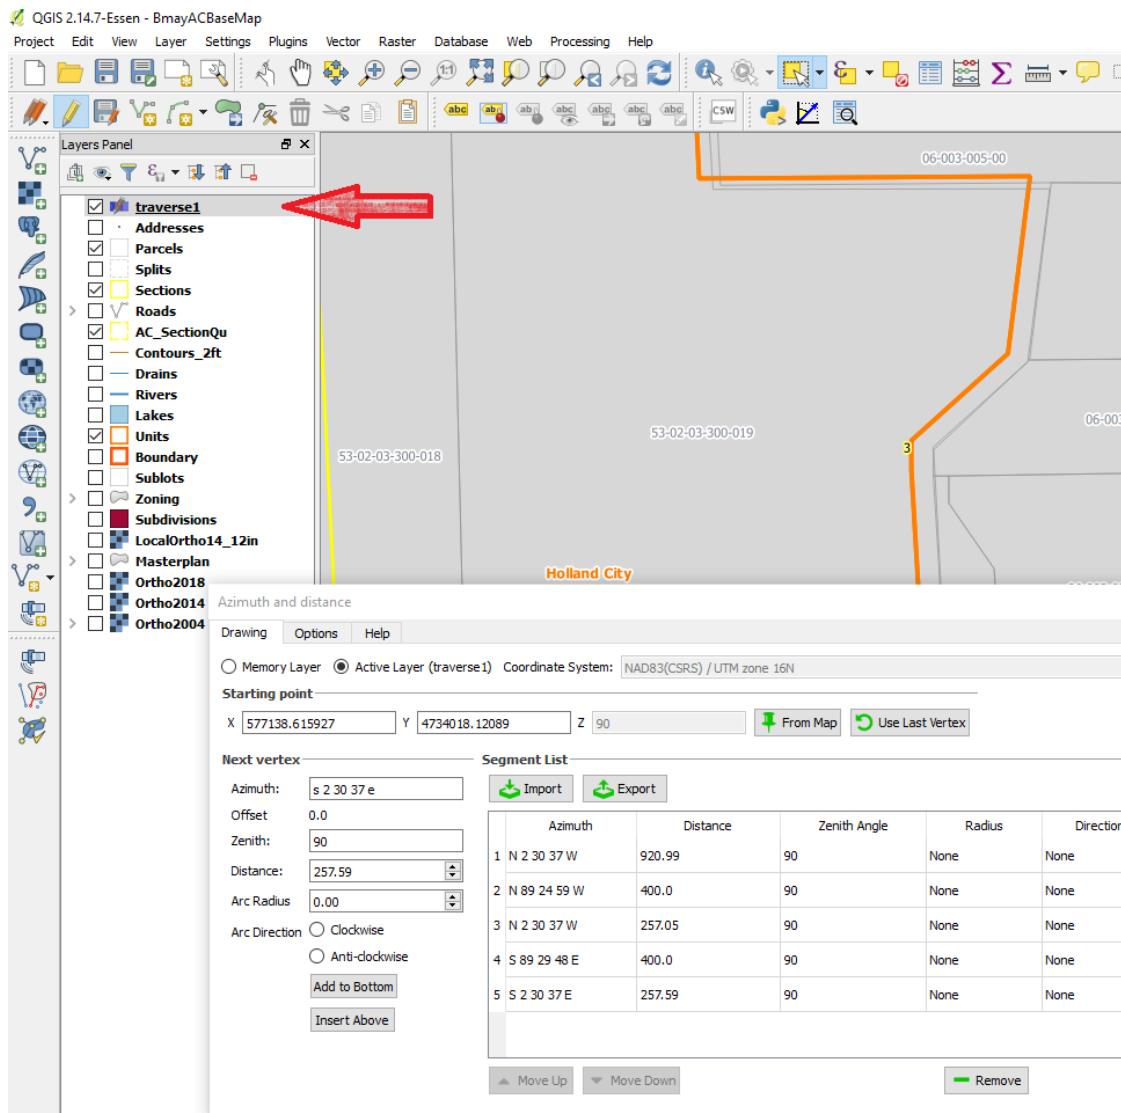

Figure 5.45: activate layer

## Step 3: Locate the Point of Commencement

To get to the Point of Commencement,

Use **any combination** of the following methods:

- Use Reference Layers such as Units, Sections, Quarter Sections, and Parcels.

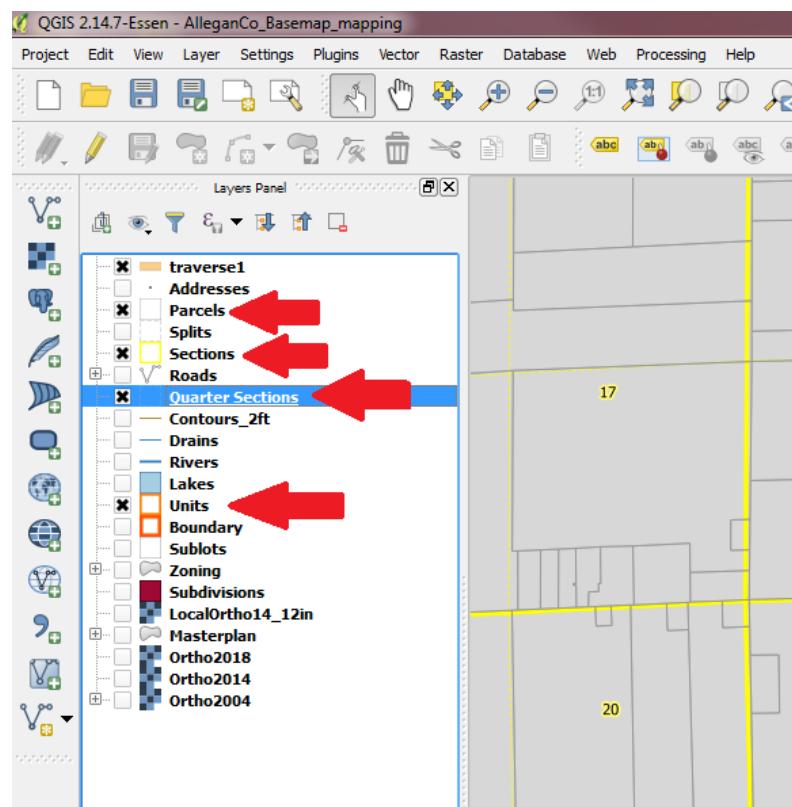

Figure 5.46: Select Reference Layers

➤ Use the Measuring Tool

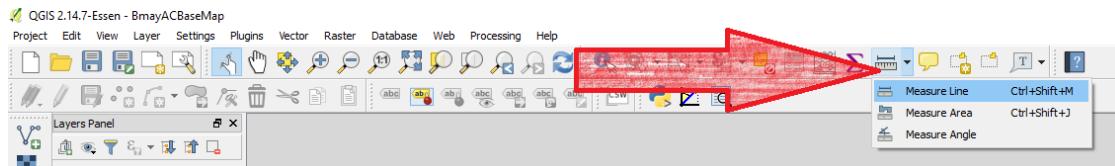

Figure 5.47: Measuring Tool

➤ Search by Parcel Number (Search Layers Plugin)

Figure 5.48: Search Layer Icon

➤ Draw COGO lines (Step 4)

## Step 4: Draw a Line With Azimuth and Distance

Commencing at Southeast corner of Section 1, Town 2 North, Range 11 West, Martin Township, Allegan County, Michigan; thence North 88 degrees 32 minutes 05 seconds West 1338.44 feet along the south line of said section to the point of beginning; thence North 01 degrees 27 minutes 55 seconds East 388 feet; thence South 88 degrees 32 minutes 05 seconds East 584 feet, more or less, to the centerline of the Gun River; thence southerly along said centerline to the south section line; thence West along said section line to the point of beginning.

Figure 5.49: Description From Deed

### On the Drawing Tab:

- Azimuth (bearing): Enter Bearing in format: *N 88 32 05 W*
- Offset: Set to *0*
- Zenith: Set to *90*
- Distance: Enter Feet Distance in numbers only *1338.44*

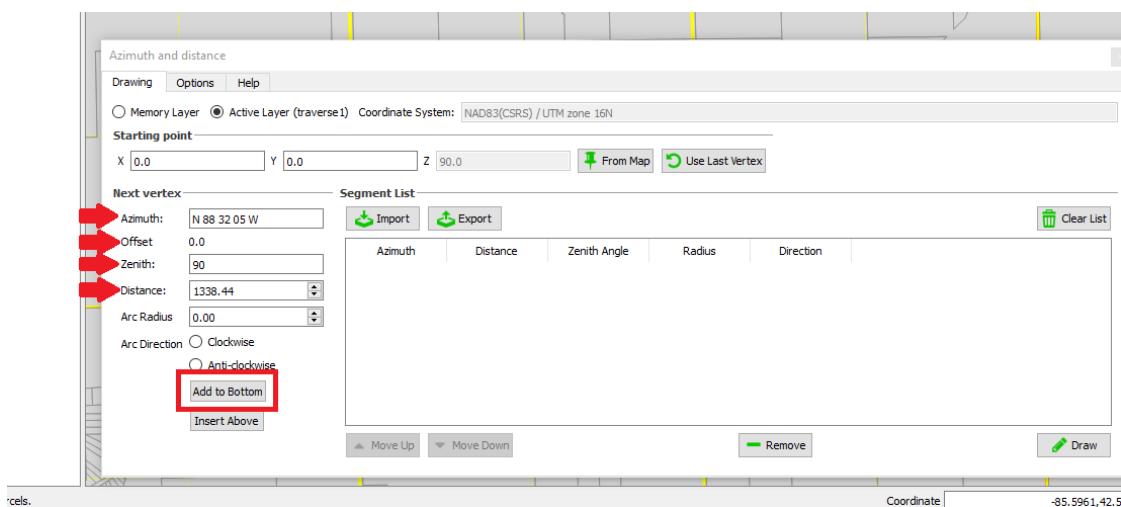

Figure 5.50: Entering Bounds

Push **Add to Bottom**

## Line is added to the list

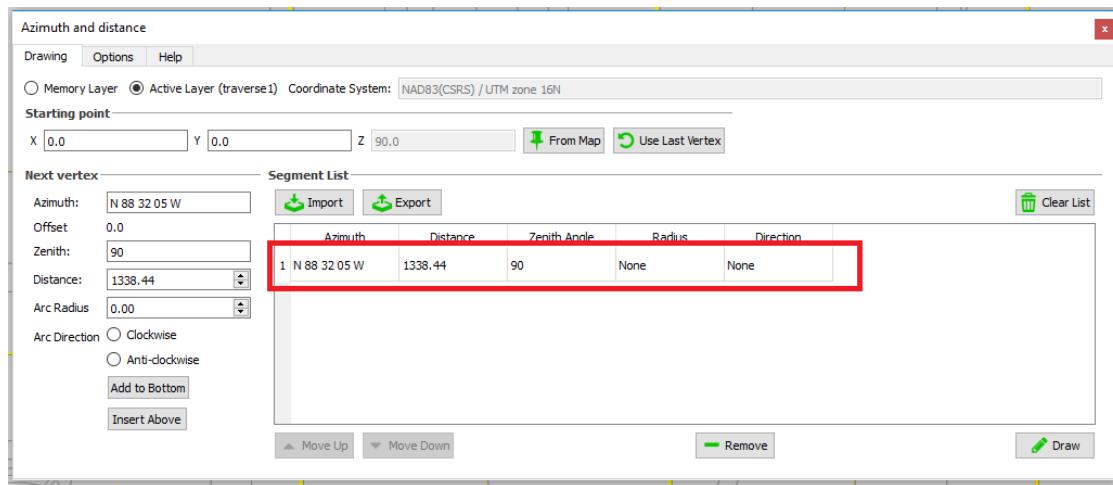

Figure 5.51: Line Added

Add as many bounds as you can from the description

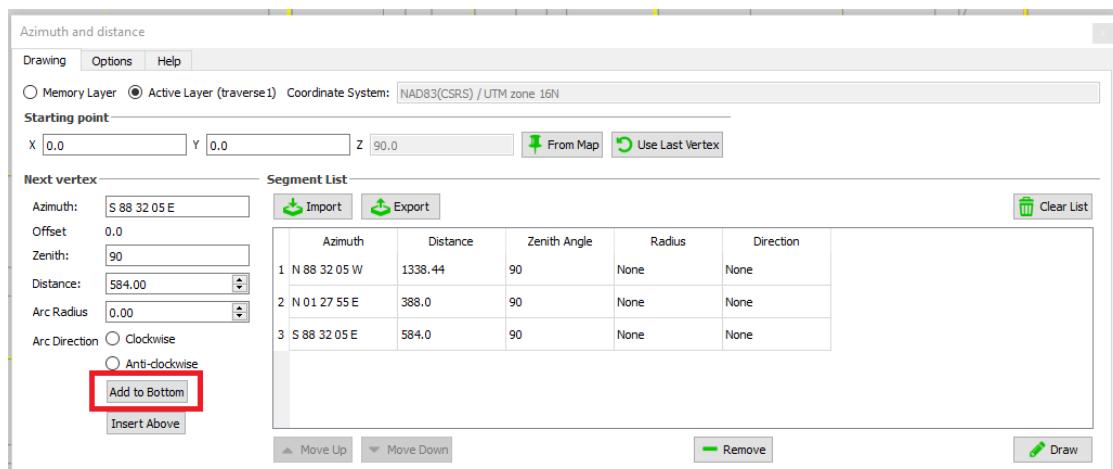

Figure 5.52: Three Lines Added

## Choose A Point to Start Drawing From

Push the **From Map** button.

\*Decide which layer to reference for a starting point.

Align cursor with desired starting point and click.

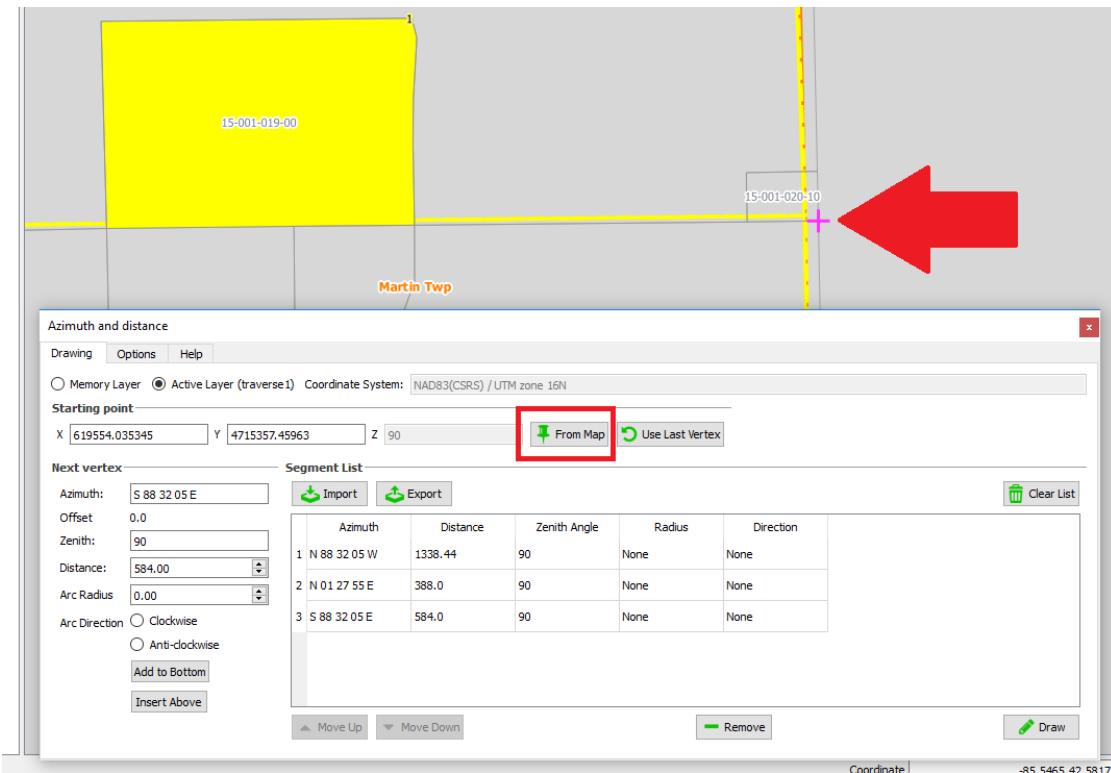

Figure 5.53: From Map

## Draw the Segments So Far

- Push **Draw**
- Enter Attributes for the polyline to be created
- Press **OK**

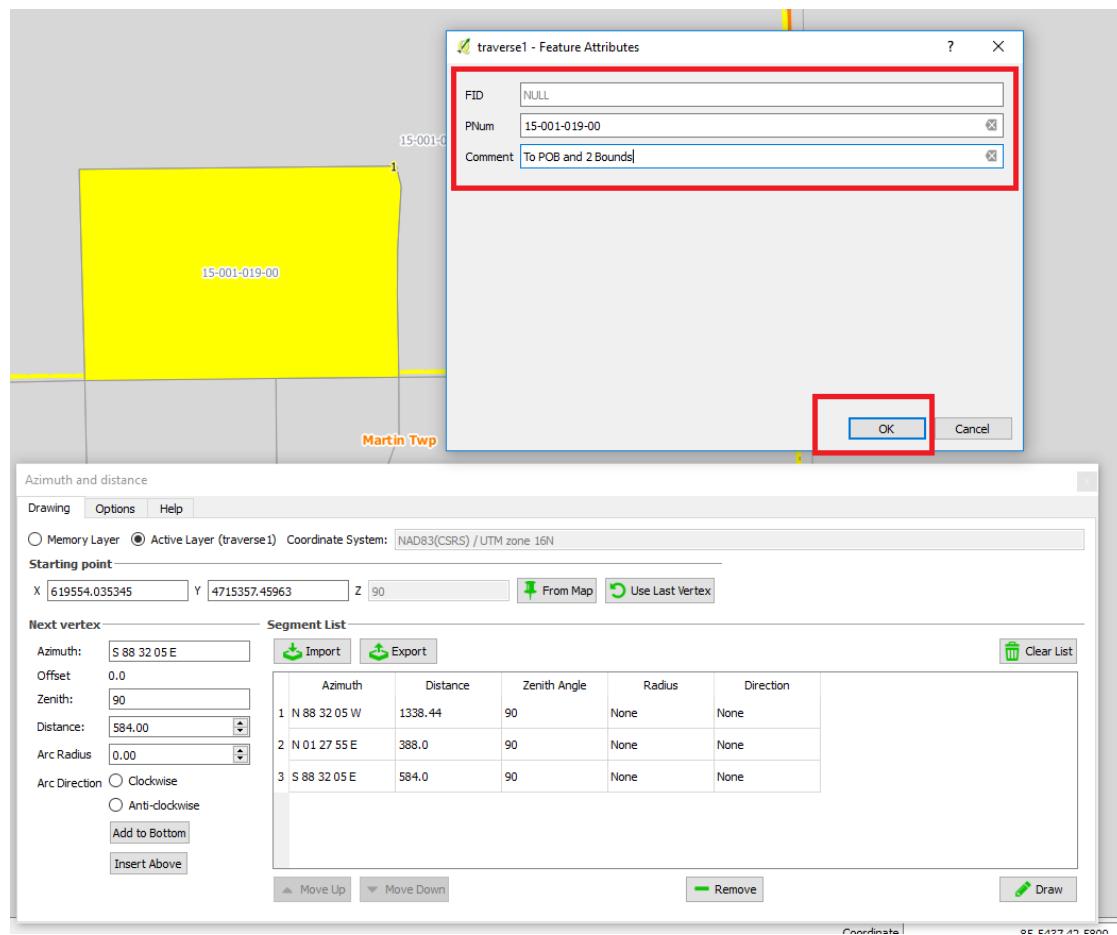

Figure 5.54: Enter Attributes

## Use the sketch to identify the parcel

In this case, turn on ortho photo to verify the remaining bounds.

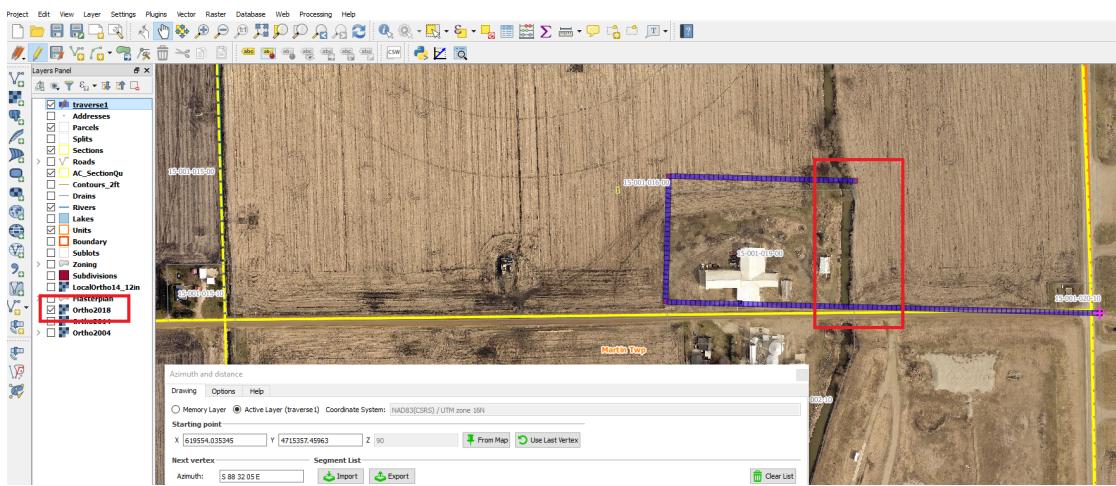

Figure 5.55: Verify Remaining Bounds

## (optionally) Save Input for Later Use

If you want to save the segments for later use, press **Export**.

Name it and select a **save** location.

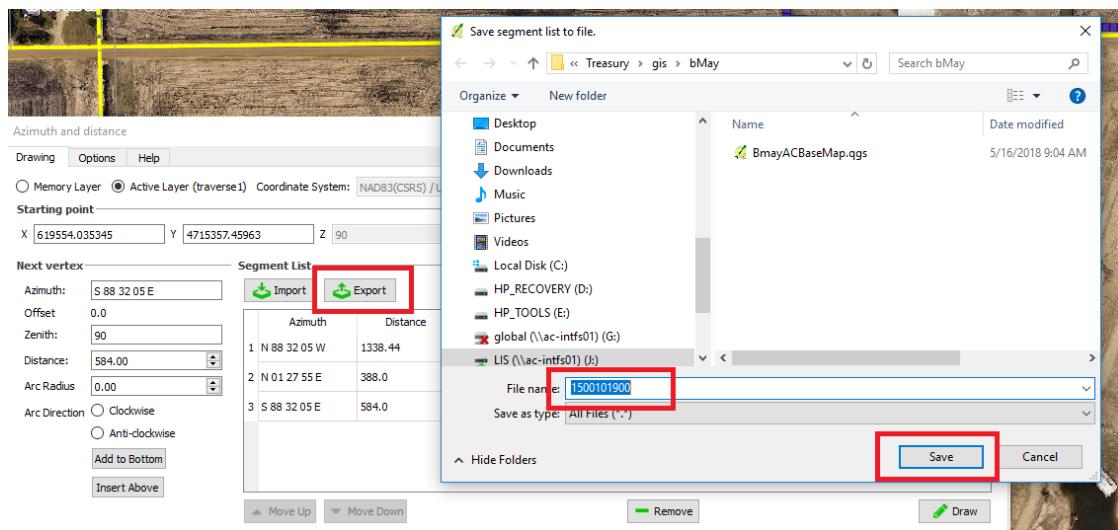

Figure 5.56: Save Segment List

## Verify Attributes

Right click on **Traverse1** in the Layers Panel

and select **open attribute table**.

The attributes you entered should be in the table.

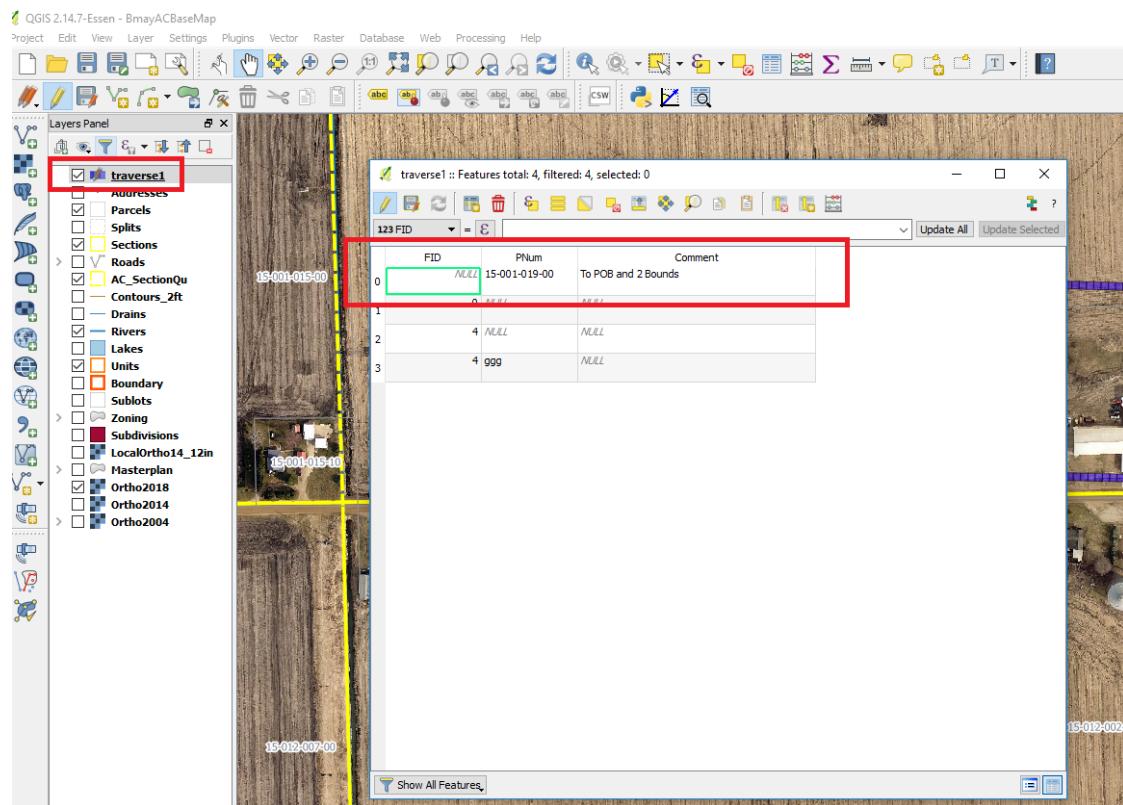

Figure 5.57: Segments In Table

### 5.9.3 SEARCH LAYERS PLUGIN

#### TOOL SUMMARY

QGIS has some tools built in and others can be added via the Plugin architecture.

#### Background

QGIS is an open source GIS and search by feature attributes is needed.

#### Who the Tool is For

QGIS users that require a search by attributes tool.

#### Why the Tool is Needed

QGIS users need a tool to search for features by attribute.

#### Takeaway

The Search Layers Plugin can be added to any installation of QGIS.

## P L U G I N S E T U P

### Install Search Layers Plugin

- To install: Plugins ⇒ **Search Layers** Plugin ⇒ Install

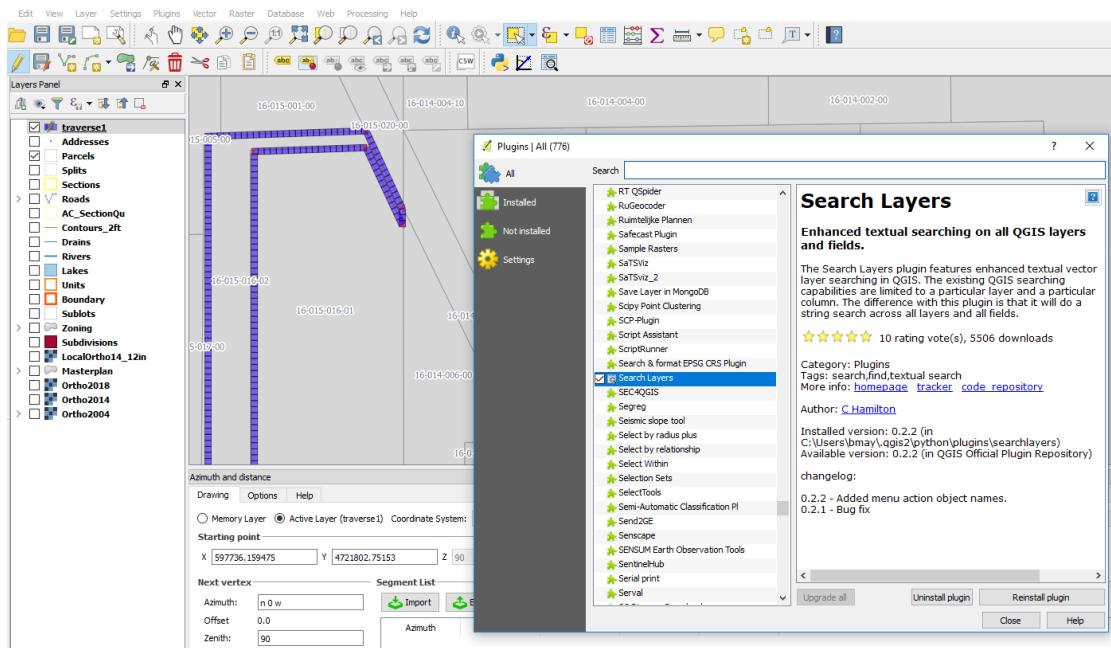

Figure 5.58: Search Layers Plugin

### Search Layers Plugin Tool is Added to the Toolbar

Figure 5.59: Search Layer Icon

## U S I N G T H E P L U G I N

### Enter Parcel Search Data

#### In The Search Layers Plugin:

- Enter **parcel number** (with dashes) into *Search String*
- Select **Parcels** in *Search Layers*
- Select **PARCELID** in *Search Fields*
- Select **=** in *Comparison*

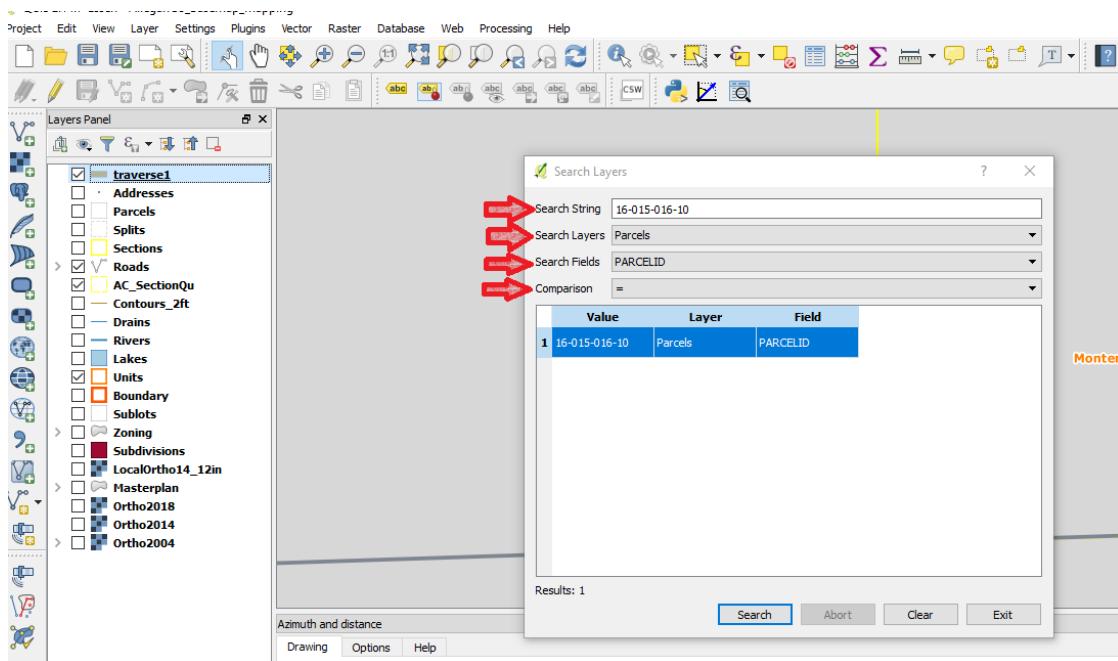

Figure 5.60: Search Layers Setup

- click on result in table

Screen zooms into the selection

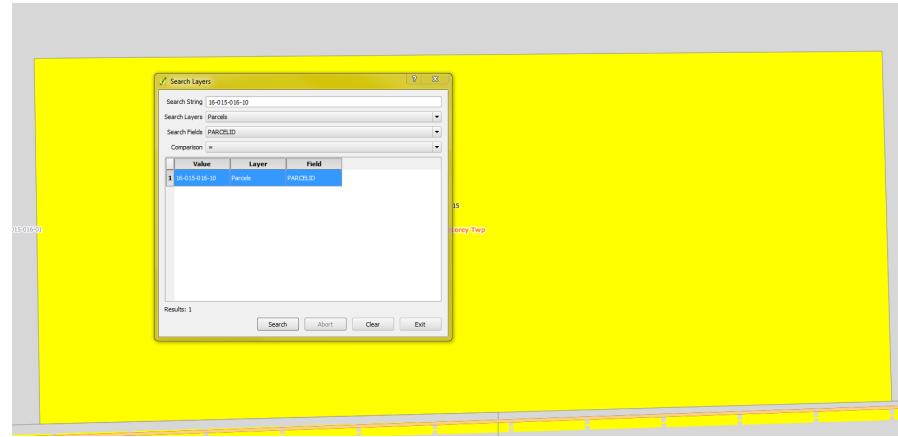

Figure 5.61: Search Results

Zoom out far enough to find a reference point

Figure 5.62: Search Results Zoomed Out

E A S T I N G

**Using a spreadsheet to convert the dimensions**

To use Northing and Easting from survey plans: In a spreadsheet, adjust the data to be relative to the 1st point

So if a survey gives you:

Pt	Northing	Easting
1	995.9952	9766.6
2	994.3049	9112
3	989.234	7150
4	1194.3099	9114
5	1193.266	8710.2059
6	1193.0954	8644.2016
...	...	...
32	1617.7856	8827.4296

Table 1: Survey Plan Northing and Easting

Calculate Relative North and Relative Easting of the points to Point 1 by subtracting the point 1 values from each of the other points.

Use formulas:

	A	B	C	D	E
1	Pt	Northing	Easting	Relative NS	Relative EW
2	1	995.9952	9766.6	0	0
3	2	994.3049	9112	=B3-B\$2	=C3-C\$2
4	3	989.234	7150	=B4-B\$2	=C4-C\$2
...	...	...	...	...	...
6	32	1617.7856	8827.4296	=B9-B\$2	=C9-C\$2

Table 2: Survey Plan Northing and Easting

Giving you:

	A	B	C	D	E
1	Pt	Northing	Easting	Relative NS	Relative EW
2	1	995.9952	9766.6	0	0
3	2	994.3049	9112	-1.6903	-654.6
4	3	989.234	7150	-6.7612	-2616.6
...	...	...	...	...	...
6	32	1617.7856	8827.4296	621.7904	-939.1704

Table 3: Relative Northing and Easting

So to place pt 32:

From pt 1:

Use distances 621.7904' N and 939.1704'W
