Documentation

2.1 About Documentation

How Jalapeño Works

General Notes:

- jalapeno folder is a git package.

<https://github.com/nbesteman/jalapeno>

- Project is coded with relative paths and jalapeno can be located anywhere.

Project file structure:

... \jalapeno \ ..

folder	description
documentation	resources used in Jalapeño
processing	.tex documents and build folders
source	common image files

... \jalapeno \ documentation \ ..

folder or file	description
moduleTemplates	.tex templates
packageDocs	L <small>A</small> T <small>E</small> X documentation
references	reference and appendix resources
unsorted	catch all for unsorted documentation
BookStructureMM.mm	A mindmap of jalapeno

... \jalapeno \ processing \ ..

folder or file	description
...Part	folders of book <i>parts</i>
build	L ^A T _E X folder for .pdf output and temp files
build\referenceEntries.bib	entries that appear in references
commonTitle.tex	code for all title pages
fullCompile.sh	shell script to compile GISDocumentation.tex
GISDocumentation.tex	master document code
glossaryEntries.tex	entries that appear in glossary
indexEntries.tex	entries that appear in the index
preamble.tex	preamble code for all documents

*Note about referenceEntries.bib

Any reference entries built here can be cited in any .tex document in the project.

Using the glossary

Glossary requirements:

Glossary commands require a Perl interpreter. Activeperl is a free Perl interpreter and can be downloaded from:

<https://www.activestate.com/activeperl/downloads> (A typical installation adds Perl to your path). Compiling the glossary requires running the makeglossaries command either in a L^AT_EX IDE or in command line as described here. PDFLatex must be run first to create a .aux file that is used by makeglossaries to create an .gls file. After the .gls file is created, PDFLatex must be run again to insert the glossary at the \printglossaries location.

Creating a new glossary entry

To **create a new glossary entry**: Add an entry to glossaryEntries.tex. Save it there and then use the makeglossaries command to recompile the .gls file.

Rebuilding the glossary

To Recompile the .gls. In the (main document)build folder:

- Launch command prompt
- enter command: **makeglossaries GISDocumentation***

*Note:

This command reads the .aux file and creates the .gls file. The .aux file is created by compiling with PDFLatex. If there is no .aux file the command will fail.

Using glossary terms in a subdocument:

In the subdocument you must add code to input the glossaryEntries file. For example:

After the line:

```
\input{../../../../../preamble}
```

Add the line:

```
\input{../../../../glossaryEntries}
```

To use a glossary term in the subdocument:

In place of the term, use code referencing the key (in the glossaryEntries file):

- \gls{key}

To add the glossary to the subdocument:

- Add the line \makeglossaries to the preamble of the subdocument.
 - Add the line \printglossaries to the subdocument.
 - Run makeglossaries in command line on the subdocument similar to how is described above.
-

Using the bibliography(References)

Bibliography requirements:

Compiling the bibliography requires running bibtex either in a L^AT_EX IDE or in command line as described here. PDFLatex must be run first to create a .aux file that is used by bibtex to create a .bbl file. After the .bbl file is created, PDFLatex must be run again to insert the bibliography at the \bibliography location.

For example, the command:...\\bibliography{referenceEntries} ...places the bibliography called referenceEntries.bib which must be in the same folder as the project .aux file.

Creating a new bibliography entry

To **create a new bibliography entry**: Add an entry to referenceEntries.bib. Save it there and then use bibtex to recompile the .bbl file.

Rebuilding the bibliography

To **Recompile the .bbl**. In the (main document)build folder:

- Launch command prompt
- enter command: **bibtex GISDocumentation**

*Note:

This command reads the .aux file and creates the .bbl file. The .aux file is created by compiling with PDFLatex. If there is no .aux file the command will fail.

To cite a bibliography source in a subdocument:

In the place that you want the citation:

- ~\\cite[pg.#]{key}
-

To add the bibliography to the subdocument:

- Similar to adding to the master document but not documented here.

Using the Index

Index requirements:

Compiling the index requires running the makeindex command either in a L^AT_EX IDE or in command line as described here. PDFLatex must be run first to create a .aux file that is used by makeindex to create an .idx file. After the .idx file is created, PDFLatex must be run again to insert the index at the \printindex location.

Creating a new index entry

To **create a new index entry**: Add an entry to indexEntries.tex. Save it there and then use the makeindex command to recompile the .idx file.

Rebuilding the index

To **Recompile the .idx** In the (main document)build folder:

- Launch command prompt
- enter command: **makeindex GISDocumentation***

*Note:

This command reads the .aux file and creates the .idx file. The .aux file is created by compiling with PDFLatex. If there is no .aux file the command will fail. Run PDFLatex first

Using index terms in a subdocument:

In the subdocument you must add code to input the indexEntries file. For example:

After the line:

```
\input{../../../../../preamble}
```

Add the line:

```
\input{../../indexEntries}
```

To use a index term in the subdocument:

In place of the term, use code referencing the key (in the indexEntries file):

- \index {key}

To add the index to the subdocument:

- Add the line \makeindex to the preamble of the subdocument.
- Add the line \printindex to the subdocument.
- Run makeindex in command line on the subdocument similar to how is described above.

Applications

4.1 Applications for Treasurer Dept.

Forfeiture Data Collection

Problem and Analysis

Background

Treasurer department has an annual responsibility to properly document the tax forfeiture process. The LIS Department built an application in MS Access and MapInfo that consumed a daily export from BSA and was deployed to the field on a laptop. A digital camera was used for site photos and later imported into the laptop.

Statement of Problem

Current Tax Forfeiture workflow is built on MapInfo software which has been replaced by ESRI software. The Forfeiture data collection application must be recreated in the ESRI framework.

Analysis

Tax Forfeiture Application, referred to here as: **Forfeiture App** will facilitate:

- Mobile data collection on handheld device, referred to here as:
Mobile Interface
 - Mobile Interface will:
 - * Synchronize with data in the office (online)

- * Navigate to forfeiture sites (offline)
- * Collect data and photos of forfeiture sites (offline)
- * Synchronize the collected data with data in the office (online)
- Daily form production and printing for each site visited with required data and images

Design

Overview

The Forfeiture App documents the Tax Forfeiture process

The key data set, is referred to here as: **Forfeiture Parcels**

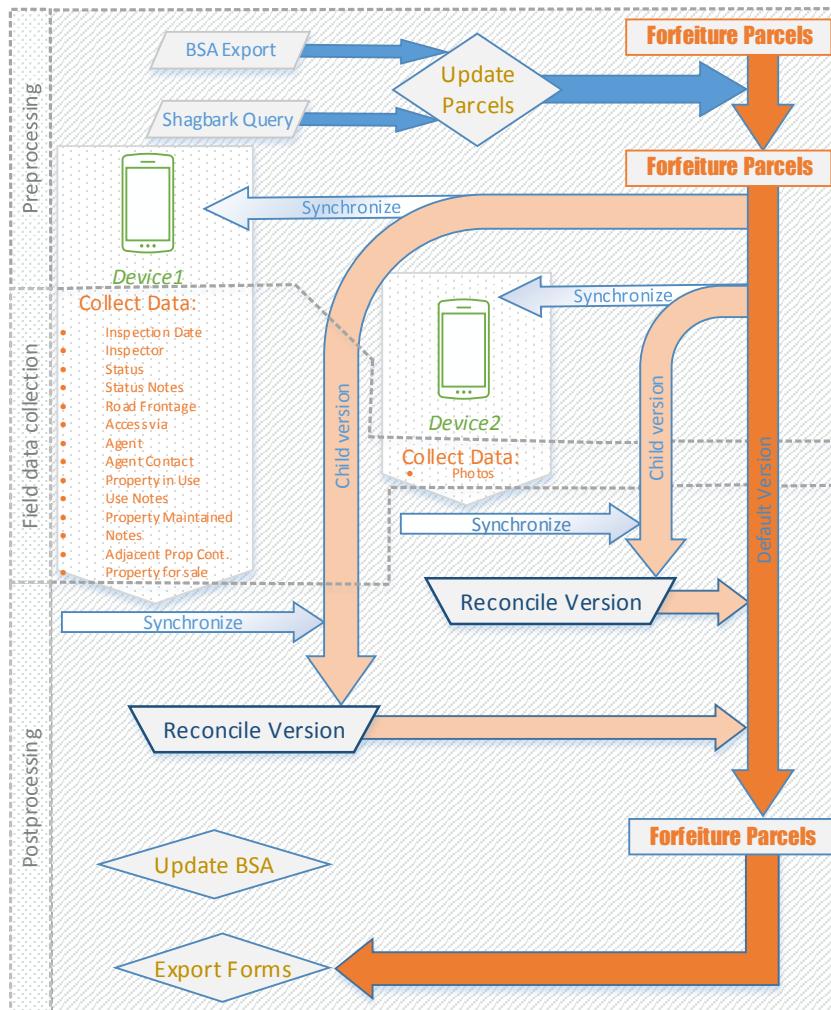

Figure 4.1: Project Design

Forfeiture App Summary

Three parts of the daily routine:

1. Preprocessing (in the office):

- Export current forfeiture list from BSA
- Update Forfeiture Parcels with BSA export
- Update Forfeiture Parcels with contaminated sites information
- Synchronize Forfeiture Parcels to Mobile Interface

2. Field data collection with Mobile Interface:

- Aids in navigation
- Provides a Checklist of data points for each site
- Attaches photos for each site
- Save results for synchronization in post-processing

3. Post-processing (in the office)

- Synchronize data and images collected in Mobile Interface to Forfeiture Parcels
 - Export form for each site
 - Print form for each site
 - Update BSA data
-

Technologies Used in The Forfeiture App

BSA Data

Details of parcels in the forfeiture process are managed in BSA Delinquent Tax.net. The Treasurer office does a BSA export of the parcels in need of a site visit in the preprocessing.

ArcGIS Desktop

Tools are designed to preprocess and postprocess forfeiture parcel data for fieldwork. The user will execute a preprocess script tool that prepares the data for field deployment. After fieldwork, a post process script tool syncronizes data from the fieldwork with the live data on the Allegan County network.

ArcGIS Collector

A free mobile application developed and tested on Android is deployed to the field for data collection. The application is configured to work offline(without an internet or cellular connection) by syncronizing before and after fieldwork. The user collects the necessary information on each forfeiture parcel in the field disconnected, and then uploads the changes when reconnected.

ArcGIS Enterprise Geodatabase

Live data from a publishing geodatabase (ACPub), running on SQL Server database server (acintsql01) provides access to Forfeiture Parcels

ArcGIS Portal Webmaps and Apps

Forfeiture Parcels is served as a feature service (REST service) named TaxReversionParcels. A webmap on Portal, called the Forfeiture Field Map consumes the TaxReversionParcels exposing the data to editing. The Forfeiture Field Map is configured to work in the ArcGIS Collector App.

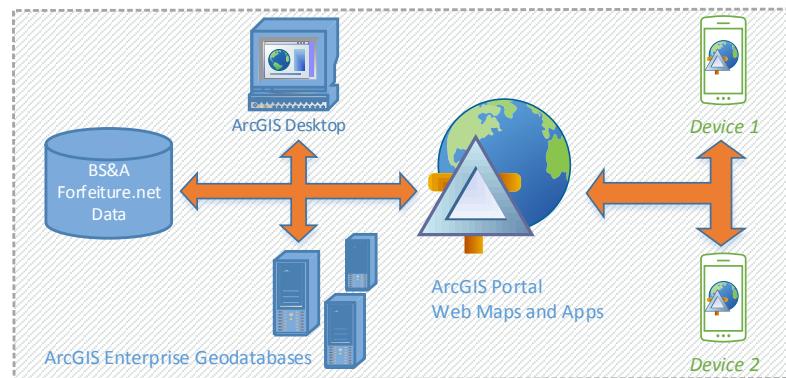

Figure 4.2: Technology Design

Data Details

Data Location

The data is located in ACPUB. ACPUB is a geodatabase on AC-INTSQL01.

ArcGIS Server

Administrative Manual

Annual Setup

A new dataset for forfeiture parcels must be created each year. The forfeiture information comes from BSA Forfeitures.net and the parcel geometry and other attributes comes from ACParcelsCombined.

To get the BSA Forfeiture data, create a table query for a certain year.

First, clear the features from the existing ForfeitureParcels dataset

- Use the Delete Feature Tools
- In the tool:
 - Select ACPub.DBO.ForfeitureParcels

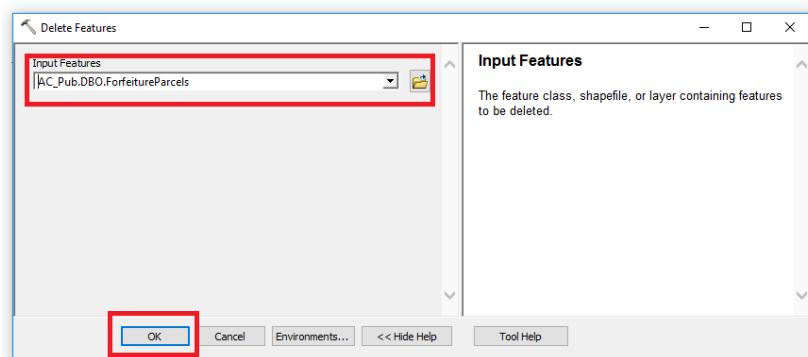

Figure 4.8: Delete Features

Press OK

Add Query Layer

- In ArcMap ⇒ Open the New Query Layer Dialog
- File ⇒ Add Data ⇒ Add Query Layer
- Select your connection

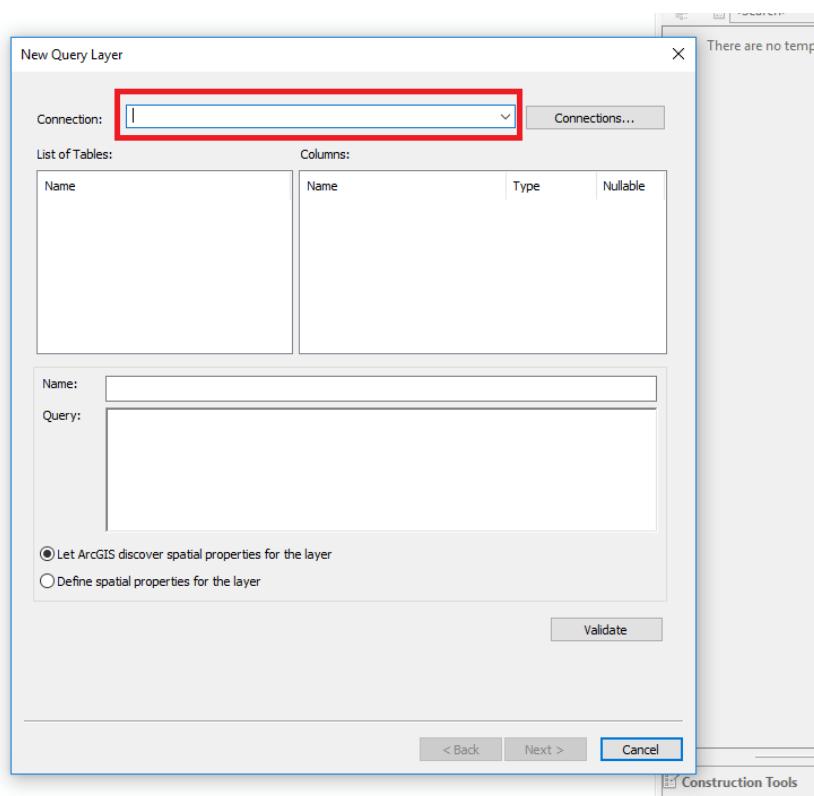

Figure 4.9: New Query Layer Dialog

Query Text:

```
SELECT [parcelnumber] FROM [D005ALLEGAN].[dbo].[Forfeitures]
WHERE forf_year = 2019
```

Details of the Query Layer

Enter into the tool

- Choose connection
- Name the query
- Enter SQL query

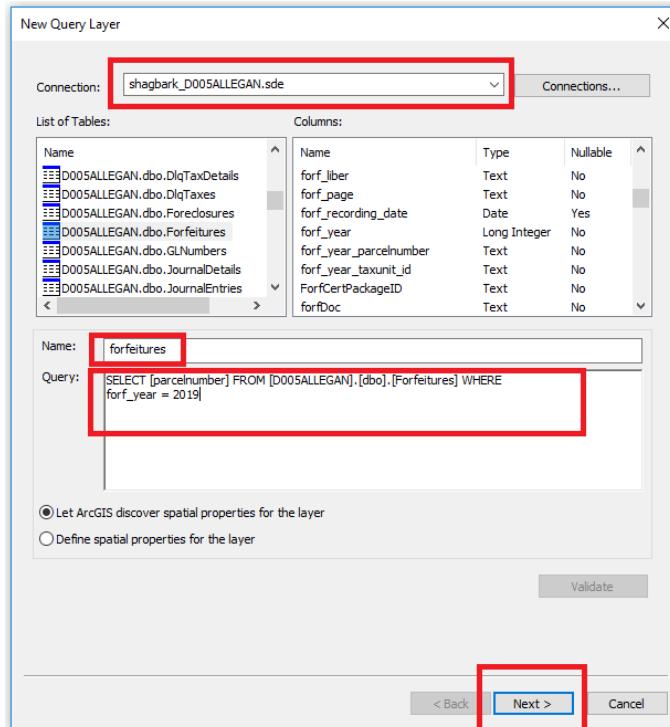

Figure 4.10: Forfeiture Query Layer Details

- Press Next

Select a Unique Identifier

- Press Finish

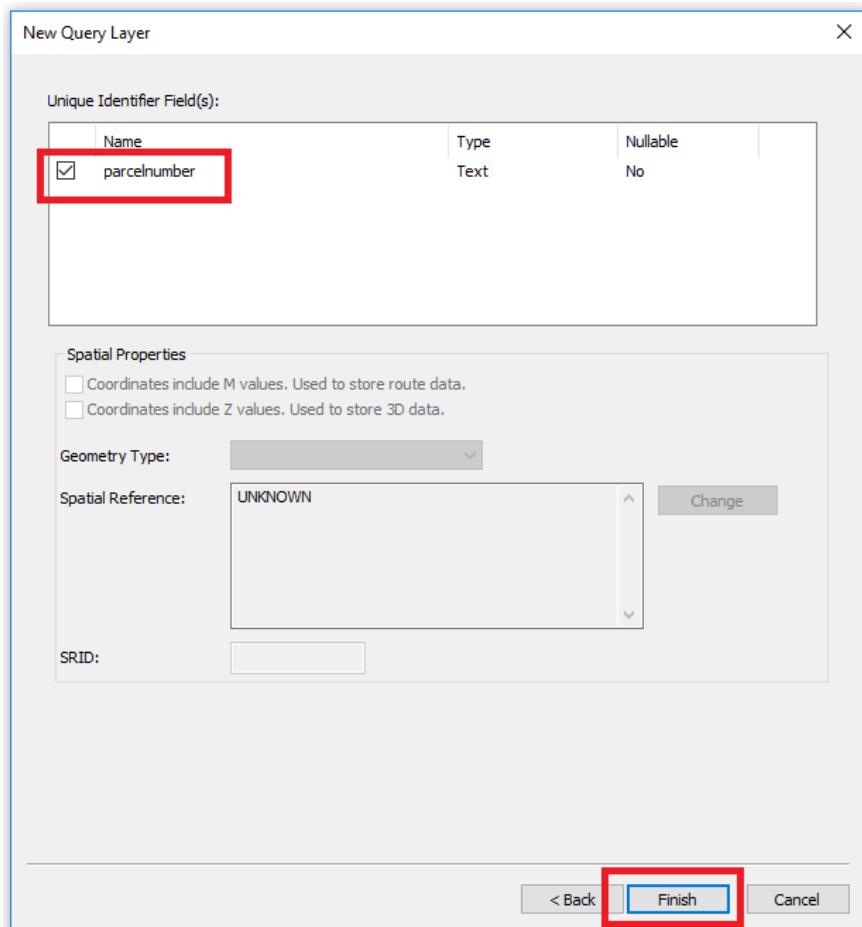

Figure 4.11: Query Layer Unique ID

Table is added to the map

The screenshot shows the ArcGIS Pro interface with two main windows. On the left is the 'Table Of Contents' window, which displays a hierarchical list of layers. A red box highlights the 'D005ALLEGAN' folder, which contains a sub-layer named 'D005ALLEGAN.DBO.forfeitures'. On the right is the 'Table' viewer window, which displays a table titled 'D005ALLEGAN.DBO.forfeitures'. The table has two columns: 'parcelnumber' and 'ESRI_OID'. The data consists of 836 rows, each containing a unique parcel number and its corresponding ESRI OID. The table includes standard navigation controls at the bottom.

parcelnumber	ESRI_OID
01-007-012-00	1

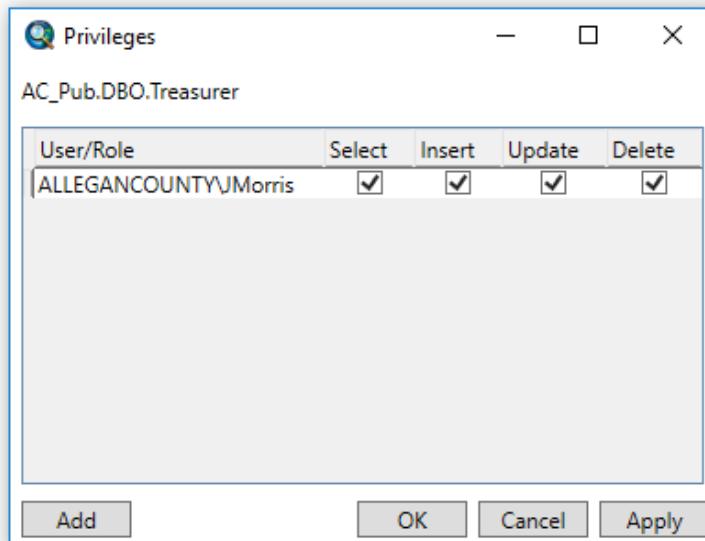

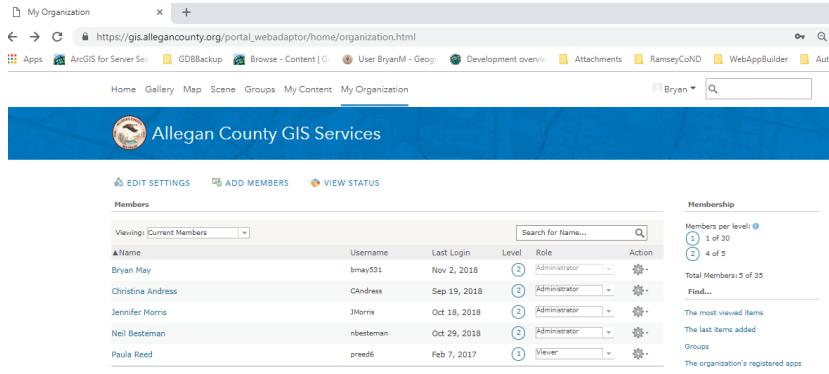

Figure 4.25: Extend Feature Dataset Privileges

Setup Users in Portal for ArcGIS

Users that will use the Collector for ArcGIS must have profiles added to and managed in the Allegan County GIS Portal site.

In Portal go to My Organization

The screenshot shows the 'My Organization' page of the Allegan County GIS Services portal. At the top, there's a navigation bar with links for Home, Gallery, Map, Scene, Groups, My Content, and My Organization. A search bar is also present. Below the navigation is a banner for 'Allegan County GIS Services'. The main content area is titled 'Members' and displays a table of current members. The table columns include Name, Username, Last Login, Level, Role, and Action. The data in the table is as follows:

Name	Username	Last Login	Level	Role	Action
Bryan May	bmay531	Nov 2, 2018	③	Administrator	
Christina Andress	CAndress	Sep 19, 2018	③	Administrator	
Jennifer Morris	JMorris	Oct 18, 2018	③	Administrator	
Neil Besteman	nbesteman	Oct 29, 2018	③	Administrator	
Paula Reed	preed6	Feb 7, 2017	①	Viewer	

To the right of the table, there's a 'Membership' section with statistics: 'Members per level' (1 of 30, 4 of 5), 'Total Members: 5 of 35', and links for 'Find...', 'The most viewed items', 'The last items added', and 'Groups'. At the bottom, it says 'The organization's registered apps'.

Figure 4.26: Portal Add User 1

Add Members to Portal

Push add members ⇒ built in member

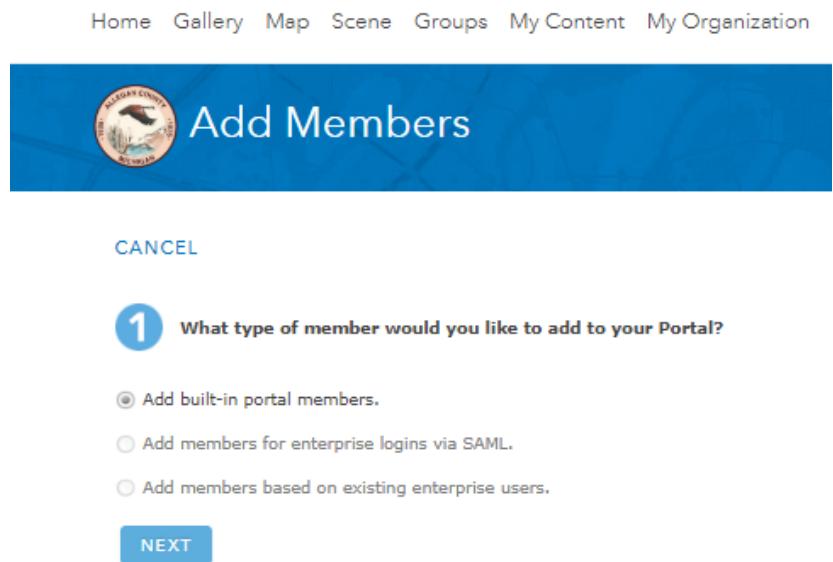

Figure 4.27: Portal Add User 2

Enter required info

The screenshot shows a web-based application titled "Add Members". At the top left is the Allegan County GIS Services logo. To its right is the title "Add Members". Below the title is a blue header bar with the word "CANCEL" in white text. The main content area has a white background. It contains a step indicator "2" followed by the text: "Create new Allegan County GIS Services logins one at a time or in batch from a file. Select any role for the member to be a part of. You must inform the member of their user name and password. If you do not have an email address for a particular user, use the administrator's email address." A note below states: "Password may not be less than 8 characters." There are two tabs at the top of the form: "One at a time" (which is selected) and "From a file". The form fields include: "Email:" (text input), "First Name:" (text input), "Last Name:" (text input), "Username:" (text input), "Password:" (text input), "Level" (radio buttons for level 1 or 2, with level 2 selected), and "Role:" (dropdown menu showing "Publisher"). At the bottom are three buttons: "BACK", "ADD ANOTHER" (highlighted in green), and "REVIEW ADDITIONS".

Managing Map Services

To stop ArcGIS Server

Launch ArcGIS Server Manager

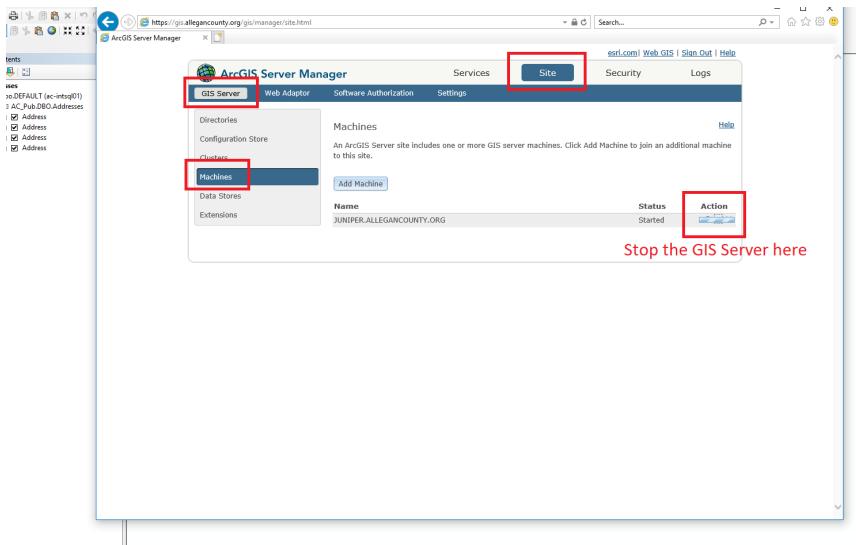

Figure 5.23: Stop the GIS Server

Fixing Damaged Services

Removing Lock Files

A blog about it <https://community.esri.com/thread/103710>

```
on juniper
C:\arcgisserver\config-store\services\ParcelViewer2\
PV2Addresses.MapServer\startup\JUNIPER.ALLEGANCOUNTY.ORG
```

This method works.

Steps:

- 1) stop arcgis server services.

- 2) delete the lock files(*.glock and *.rlock)
in arcgisserver\config-store.
- 3) restart arcgis server service.
- 4) stop the pending stopping service and then start it.

Managing Geodatabase Replicas

Adding A New Feature Class To A Replica

Source: <https://support.esri.com/en/technical-article/000010345>

Summary

Currently, there is no out-of-the-box tool to add a feature class to an existing replica. With ArcGIS Desktop, one must either recreate the replica or if the workflow allows, replicate the new feature class as a separate replica.

A feature class or table can only be added to an existing replica (without recreating the replica) using ArcObjects code.

Steps:

The steps below outline how to recreate the replica using the Register Existing Data option in Desktop. These steps can be applied to both one-way and two-way replicas.

Synchronize the changes between parent and child replica geodatabases using the existing replica so that the data is identical in each database, then Unregister the replica in both geodatabases. For two-way replicas, ensure that changes are synchronized in both directions and there are no outstanding edits before unregistering the replica. Create/import the new feature class into the parent geodatabase, and add the GlobalID. Register the newly added data as versioned. Copy and paste the new feature class to the child geodatabase using ArcCatalog. Note: that the GlobalIDs must have already been added to the feature class.

For two-way replica or one-way full model, register the newly added data in child geodatabase as versioned. Using the parent geodatabase, add all the data that is to be replicated to a map in ArcMap. Click the 'Create Replica' tool on the Distributed Geodatabase toolbar. Select 'One way replica' or 'Two way replica' and click Next. Select 'Register existing data only'. Select the child geodatabase and specify a replica name. Click Next and click Finish. A new replica is created that includes the new data.

Managing Geodatabase Versions

Version Queries

SQL Queries

Four queries of SDEversions, SDEstates, sdestatelineages, and SDEcompresslog

```
use AC_Pub
select name, owner, version_id, state_id, parent_name
, parent_owner from
[AC_Pub].[dbo].[SDE_versions]
select * from [AC_Pub].[dbo].[SDE_states] order by state_id
select * from [AC_Pub].[dbo].[sde_state_lineages] order
by lineage_name,
lineage_id
select TOP(5) * from [AC_Pub].[dbo].[SDE_compress_log] order by
compress_end DESC
```

Query of SDEversions and SDEstates

```
use AC_Pub
SELECT v.version_id,v.creation_time,v.creation_time,
s.state_id, s.creation_time
FROM SDE_versions v
INNER JOIN SDE_states s ON v.state_id = s.state_id
```

Finding Orphaned Versions

ID and delete orphaned geodatabase versions

Follow the procedure: [Link to source](#)

Use SQL Server Management Studio to execute two queries and compare the results.

Step 1:

Execute the query:

```
use AC_Pub
SELECT ObjectID, name from dbo.GDB_ITEMS where
TYPE='4ED4A58E-621F-4043-95ED-850FBA45FCBC';
```

Step 2:

Execute the query:

```
use AC_Pub
SELECT name from [dbo].[SDE_versions]
order by name
```

Compare the tables

This graphic summarizes elements of the queries. Note the items from step two that have no match in step one.

The screenshot shows two SSMS windows side-by-side. The left window, titled 'SQLQuery29.sql - A..._Pub (LISUser (59))', contains the following SQL code:

```
use AC_Pub
SELECT ObjectID, name from dbo.gdbl_ITEMS where TYPE = '4ED4A58E-621F-4043-95ED-850FBAA45FCBC';
```

A red box highlights the last part of the query: 'code for versions in gdblItems'. The right window, titled 'SQLQuery28.sql - A..._Pub (LISUser (57))', contains the following SQL code:

```
use AC_Pub
SELECT name from [dbo].[SDE_versions]
order by name
```

Both windows have their results panes open. The left window's results pane shows a table with columns 'ObjectID' and 'name'. The right window's results pane shows a table with column 'name'. Red arrows and annotations explain the comparison:

- A green arrow labeled 'Matches' points from the 'name' column in the left window to the 'name' column in the right window.
- A red arrow labeled 'No Matches' points from the 'ObjectID' column in the left window to the 'name' column in the right window.
- A blue arrow points from the 'replica ID' column in the right window to the 'ObjectID' column in the left window.
- A purple arrow labeled 'generation #' points from the 'ObjectID' column in the left window to the 'name' column in the right window.

ObjectID	name
1	ProtoPubParcelPubReplica
2	ProtoPubLandUsePlanningReplica
3	SchoolsReplica
4	BIReplica
5	EmergencyMgmt
6	AddressedReplica
7	EnvHealthReplica

name

SYNC_SEND 17893 0
SYNC_SEND 10559 12
SYNC_SEND 10965 7

Figure 5.24: Find Orphan Versions

Orphaned versions can be removed by name in ArcGIS

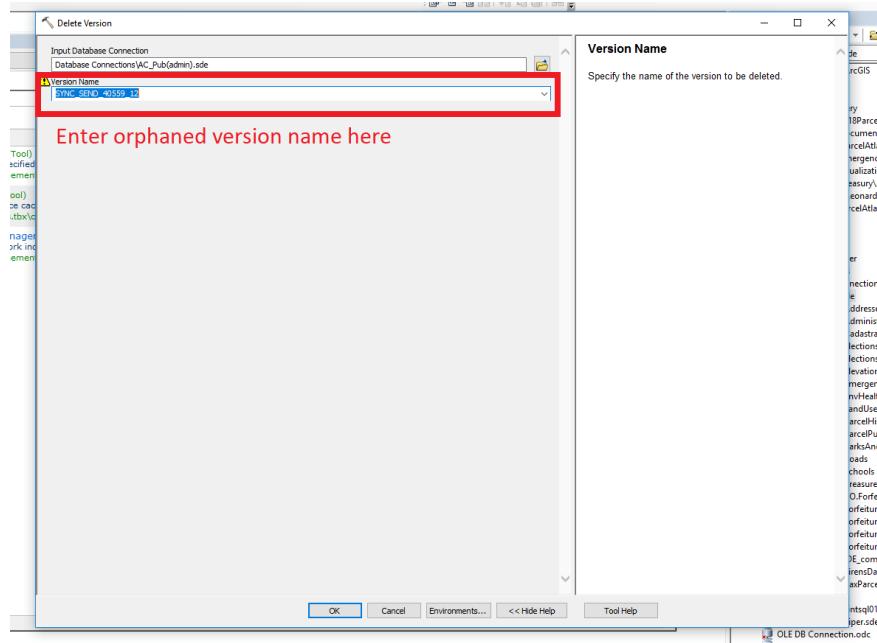

Figure 5.25: Delete Orphan Versions

MXD Management

Find/Replace Text Object

Python Code

Python Code for finding and replacing a text object in a ArcGIS .mxd file. A snippet of this code may be found in the LayerUpdates/Zoning/processing folder. It is used to edit the .mxd files located there.

```
import arcpy
from arcpy import env

env.workspace = r"J:\Apps\Python\LayerUpdates\zoning\processing"
for mxdname in arcpy.ListFiles("*.mxd"):
    print mxdname
    mxd = arcpy.mapping.MapDocument(r"J:\Apps\Python\
        LayerUpdates\zoning\processing\\\" + mxdname)
    for elm in arcpy.mapping.ListLayoutElements
        (mxd, "TEXT_ELEMENT"):
        if elm.text.startswith('As ammended'):
            elm.text = elm.text.replace('As ammended',
                'As amended')
            print elm.text
    mxd.save()
del mxd
```

5.5 LATEX Packages used by AC GIS

Common Errors

Source:

<https://www.ocf.berkeley.edu/~latex/files/commonerrors.tex>

If you have every compiled a LATEX document, chances are high you have received a few error messages. Sometimes they come from something as stupid and as easy to fix as forgetting a parenthesis or forgetting to end an environment. There are also a lot more cases where you have no idea what you have done wrong and it takes you a long time to find or even understand your error.

The purpose of this is to explain some of the common errors that may happen when compiling a LATEX document and suggestions for what is probably going on and how to debug your document.

The Form of an Error

There are two forms of errors: LATEX errors and TEX errors. In both types of errors, the part after the error message will tell you where the error occurred. An example:

1.15 <offending text>

The 1.15 tells you what line the error occurred on and the text will tell you the text that caused the error.

LATEX Errors

The general form of an error in LATEX is shown below:

! LaTeX error: <error message>

See the LaTeX manual or LaTeX Companion for explanation.

Type H <return> for immediate help.

...

The ! lets you know that the error has occurred. The error message will tell you what type of error you have committed. After the ellipses, you will find the line at which the error occurred and the text that caused the error (or at least the text where LATEX found the error).

T_EX Errors

Errors may also have the following form:

```
! <error message>
```

These errors are formatted differently because they are error messages that came from T_EX instead of L^AT_EX. After the error, you will still find the line that the error occurred in and the text of the error.

Warnings

There are some error messages that are just warnings and will not stop or change the compilation of the document. Chances are you have seen them many times.

Underfull

The following error results when a line does not extend the width of the page, something L^AT_EX always tries to accomplish:

```
Underfull \hbox (badness 10000) in paragraph at lines  
104--107
```

This error message is just a warning and is not something to worry about. For the most part, when a line does not span the width of the page, it is because you have written something that you want to only cover part of the page.

Overfull

The following error results when a line extends beyond the width of the page:

```
Overfull \hbox (16.04988pt too wide) in paragraph at  
lines 30--31 [] [] \OT1/cmtt/m/n/12 I'm trying to put  
way too much text into a line in my document.
```

Usually this error comes from when you are using the `verbatim` package because it will not move to the next line if your text does not go to the next line. The easiest way to fix this is to find the

place in your document where this is occurring and change the text so that it fits to the page.

This error will still show up if the text is still on the page but outside of the width of text that L^AT_EX has set. In this case, you are welcome to fix things so that the error does not show up or you can leave the text as it is.

References

The following warnings occur when references are changed when L^AT_EX was compiled:

LaTeX Warning: Label(s) may have changed. Rerun to get cross-references right.

LaTeX Warning: There were undefined references.

LaTeX Warning: Reference ‘name’ on page 1 undefined on input line 15.

The way to fix these errors is to recompile the document again to correct the page numbers. Sometimes it is necessary to recompile the document twice to fix this error. You also may have defined a reference wrong, so you should check to make sure your label is correct.

Beginning and Ending

Begin Ended by End

This type of error occurs when each environment is not correctly started and ended. When you are missing an \end command, the following error will show up:

! LaTeX Error: \begin{enumerate} on input line 23
ended by \end{document}.

To fix this, you need to end the environment mentioned in the error with the appropriate command.

When you are missing a \begin command, the following will appear:

```
! LaTeX Error: \begin{document} ended by  
\end{itemize}.
```

To fix this, you basically do the same thing as before, correctly beginning the environment mentioned in the error with the appropriate command.

End Occurred Inside a Group

The following error message will show up at the end of compiling a file if an environment is begun that is not ended:

```
(\end occurred inside a group at level <n>)
```

To fix this error, make sure you end the environment that was begun. The previous error is more helpful in finding the `\begin` statement.

Ended by End of Line

The following error will occur when you try to place a command inside a section heading:

```
! LaTeX Error: \verb ended by end of line.
```

```
See the LaTeX manual or LaTeX Companion for  
explanation.
```

```
Type H <return> for immediate help.
```

```
...
```

There will be many errors of the same type for this mistake. In order to find where you put the command, look in the output file and find the last heading that shows up.

Missing Begin Document

This error is self-explanatory:

```
! LaTeX Error: Missing \begin{document}
```

Errors Usually Caused by Bad Spelling

Unknown Control Sequence

This error results when you use a command (something that starts with a \) that is not recognized by L^AT_EX:

```
! Undefined control sequence.
```

Usually this error results from spelling a command incorrectly. Go to the line that is indicated by the error and fix the command.

Environment Undefined

This error results when you begin an environment with a \begin command that is not recognized:

```
! LaTeX Error: Environment verbatim undefined.
```

Usually you have just spelled your environment incorrectly, so you just need to fix it.

Bad File Name

This error results when you have mistyped the command latex or do not have L^AT_EX installed on your computer:

```
Bad command or file name
```

To fix this, correctly spell the command to compile your file or make sure that L^AT_EX is correctly installed on your computer.

Cannot Find File Name

This error occurs when you try to compile a file that the computer cannot find:

```
! I can't find file 'sample'.  
<*> sample
```

Please type another input file name:

To fix this error, make sure you have spelled the file name correctly. You also may be in the wrong directory to compile the file, so check to make sure you are in the same directory as your file.

Fatal Errors

Runaway Argument

This error happens when a paragraph ends before a command's argument is done (i.e., L^AT_EX thinks that there is a missing }):

`Runaway argument?`

To fix this, you should use a different command to accomplish what you are trying to do. An example of this is to use `\bfseries` instead of `\bfseries` to make bold text in more than one paragraph.

This error can also be caused by a missing mandatory argument to a command.

Just an *

This error normally occurs when you do not end your document with
`\end{document}`:

*

If you are prompted to enter something in, it is best to enter

`\end{document}`

and hope it works. Be sure to end your document with the appropriate command.

Emergency Stop

This error happens when L^AT_EX will stop trying to compile your document due to a serious error:

`! Emergency stop.`

To fix this error, you will need to figure out what caused it to stop compiling. Chances are you forgot to end your document with `\end{document}`, but there might also be another reason for the emergency stop.

Please Type a Command or Say End

This error happens when your file has ended prematurely:

(Please type a command or say ‘\end’)

The best way to deal with this type of error is to type

\end

or

\end{document}

in the case that the absence of that command caused the error. Usually if you have ended your document correctly, the error will result from a missing } or forgetting to end a verbatim environment.

Graphics Errors

Too Many Unprocessed Floats

This error occurs when figures or tables (i.e., floats) have not been typeset:

! LaTeX Error: Too many unprocessed floats.

L^AT_EX can only have so many floats waiting to be typeset. In order to fix this error, make sure that you are placing your floats where you want them (with a [h] option) and not wanting too many on one page in sequence. Using the command \clearpage can be very useful in distributing floats correctly.

Unknown Graphics Extension

The following error occurs when you try to use a type of graphic that is not supported by the type of file that you are producing:

! LaTeX Error: Unknown graphics extension: .gif

In order to fix this error, you should change your graphics to the types that are supported by the type of file you are outputting or you will need to include the correct package to deal with that type of graphic. Sometimes you may have named the graphic poorly so that L^AT_EX will not recognize it as a graphic file.

Division by Zero

The following error occurs when the height of a graphic object is zero:

```
! Package graphics Error: Division by 0.
```

This is usually caused when you rotate an object with zero depth so that its height becomes zero. The best way to fix this is to use the keyword `totalheight` instead of `height`.

Math Errors

Display Math Should End With \$\$

This error occurs when the `displaymath` or `equation` mode is ended incorrectly:

```
! Display math should end with $$
```

To fix this error, make sure that you end the `displaymath` or `equation` mode correctly (ending them with a `$` is not acceptable).

Bad Math Environment Delimiter

This error occurs when you do not have your delimiters correct in math mode:

```
! LaTeX Error: Bad math environment delimiter.
```

Usually this occurs when you forget to match a right delimiter with every left delimiter. This error may also happen when you forget to end an array.

Missing Right

This error occurs when you have a missing right parenthesis:

```
! Extra \right.
```

To fix this, you either need to add a `\right` command or you need to end an array.

Missing Delimiter

This error message occurs when a delimiter is missing:

```
! Missing delimiter (. inserted).
```

To fix this error, you need to make sure that you have a right delimiter for every left delimiter. If you do not want a right delimiter matching a left delimiter, you need to use “.” to not have an error message show up.

Missing \$ Inserted

The following error occurs when you try to use a character that can only be used in math mode, like _ or ^:

```
! Missing $ inserted
```

To fix this error, make sure you change the character to what it should be in text mode.

Tabular Environment Errors

Misplaced Alignment Tab Character &

This error occurs when you use & and when you are not in a tabular environment:

```
Misplaced alignment tab character &
```

To fix this error, you need to use \& to make a &.

Extra Alignment Tab

This error occurs when you use too many tabs for the number of columns in a table:

```
! Extra alignment tab has been changed to \cr
```

The result of this error is that a new row is formed where the extra tab was. You should go back and fix your table so that the correct number of items in each row would show up.

Argument Has an Extra }

These errors happen when an incorrect number of arguments to a tabular environment have been specified:

```
! Argument of \cline has an extra }.  
! Argument of \multicolumn has an extra }.
```

To fix this error, make sure your arguments to the tabular environment are correct.

Errors With Lists

Missing Item

This error occurs when there is plain text in an environment that takes items:

```
! LaTeX Error: Something's wrong--perhaps a missing  
\item.
```

To fix this error, make sure the plain text is changed into an item.

Too Deeply Nested

This error occurs when there are too many lists for L^AT_EX to handle:

```
! LaTeX Error: Too deeply nested
```

L^AT_EX can only handle four levels of one type of list and six levels of different types of lists. To fix this, you need to use less levels of lists or define your own list environment.

Miscellaneous Errors

Only Used in the Preamble

This error occurs when you place a command in the body of a L^AT_EX document that should be placed in the preamble:

```
! LaTeX Error: Can be used only in the preamble.
```

To fix this error, just move the command to the preamble.

There Is No Line/Page Here to End

This error occurs when you incorrectly use the commands that make a new line or a new page:

```
! LaTeX Error: There's a no line here to end.
```

You may just leave the command that is making a new line in place or you can take it out. Here, L^AT_EX is just trying to make sure that everything looks nice.

Command Already Defined

This error occurs when you try to define a command that already exists:

```
! LaTeX Error: Command ... already defined.
```

To fix this, you need to define your command differently.

Missing Number

This error is made when a number is expected as an argument and one is not provided:

```
! Missing number, treated as zero.
```

To fix this error, you need to find where a number is expected so that you can provide the correct one.

hyperref Package

Introduction

Official hyperref package documentation

Notes:

- Add the *hyperref package* to the preamble **last** [?]
- To use Tex in a pdf bookmark: use

`\texorpdfstring{\{}{\}}`

ie. `\paragraph{Sample Text\texorpdfstring{\{}{\}}}`

Creates a new line without an error.

```
\usepackage[options]{hyperref}
```

Simple Use

Use `\href{URL}{DESCRIPTION}` to add a link with description

```
\href{https://www.latex-tutorial.com}{Website with tutorials}  
produces:
```

Website with tutorials

Options

Add optional arguments to the `usepackage` line:
Useful options:

- **pdftex**

enables other options like breaklines

- **breaklinks**

allow links to be broken across several lines

eg. <https://lists.gnu.org/archive/html/emacs-orgmode/2013-06/msg00776.html>

- **colorlinks**

Colors the text of links and anchors.(default is false)

- **linkcolor**

Color for normal internal links(default is red).

- **anchorcolor**

Color for anchor text.

- **citecolor**

Color for bibliographic citations in text.

- **urlcolor**

Color for linked URLs

Use with options

```
\usepackage[breaklinks,colorlinks,citecolor=blue,
urlcolor=green]{hyperref}
```

Commands

`\href{URL}{text}` Makes text a link to URL.

To put a file path in text:

eg:

[Official hyperref package documentation](#)

(documentation Pt.4 pg.15)

`\href[options]{URL}{text}`

Options:

- absolute

```
\href{C:/AC/jalapeno/documentation/packageDocs/hyperref2017.pdf}
    {Official hyperref doc}
```

- relative **Note: relative path must be from final pdf location**

```
\href{../../../../documentation/packageDocs/hyperref2017.pdf}
    {Official hyperref package doc}
```

This path works from main document

```
\href{../../../documentation/packageDocs/hyperref2017.pdf}
    {Official hyperref package documentation}
```

This path works from subsection document

`\hyperref[label]{text}`

Makes text a link to where `\ref{label}` would point.

`\hypertarget{name}{text}`

Sets an anchor on text with the label name.

`\hyperlink{name}{text}`

Makes text a link that takes you to the anchor labeled name.
Pair with `\hypertarget`.

\phantomsection

Used in conjunction with

\addcontentsline

to make the correct link in the Table of Contents.

standalone Package

Introduction

[Link to official standalone documentation](#)
standalone provides a **package** and a **class**

- The *standalone* **package** is used for:

- Main documents that will input or import sub documents.
- For example:

```
\usepackage[subpreambles=false]{standalone}
    * Ignores preambles of imported sub documents [?, pg.4]
```

- the *standalone* **class**:

- Is a document class
- Provides standalone / subdocument switches and options
- For example:

```
\documentclass[class=article]{standalone}
    * behaves as an article when standalone
    * makes document available for import into a master
        document
```

Simple Use

- The *standalone* **package**

- In the main document:

```
\documentclass[openany]{book}
```

```
\preamble...
```

```
\usepackage{standalone}
```

- the *standalone* **class**:

- In any subdocument:

```
\documentclass[class=article]{standalone}

\preamble...
```

Options

- The *standalone* package
 - **subpreamble**
 - * default value of subpreambles is *false*
- the *standalone* class:
 - **crop**
 - **titlepage**
 - **twoside**
 - * Makes pagination style match book
 - * default value is *false*
 - **multi**
 - * `multi=true|false`
 - * `multi={<environment name>, ...>}`
 - **float**

Use with options

- the *standalone* package:
 - `\usepackage[subpreambles=false]{standalone}`
- the *standalone* class:
 - `\documentclass[class=article , crop=false,
 titlepage, twoside,
 multi={itemize, figure, verbatim},
 float=false]{standalone}`

\input{../../../../../preamble}

\def\titlename{Subsection Template}

\title{\input{../../../../commonTitle}} % closing brace for title

\begin{document}% Document Begins
```

```
\input{../../commonFront} % provides standalone options  
  
% NEW INFO GOs HERE.  
\subsection{Subsection Template}  
\medskip
```

5.7 PDF Tools used by AC GIS

PDF Optimizer

Purpose and Summary

Workflow Purpose: Optimization of a large number of pdf docs.

Workflow Summary: Uses Python to create a list of .pdf docs in a folder and creates a batch file to optimize the pdfs in the list to another location. The batch process calls ghost script for the optimization.

requirements

Opensource software:

- ghostscript
- python 2.7 and a Python IDE
- A text editor

paragraphPython(2.7)

Note:

The output of this script is bdoc.txt, Save as a .bat to execute the optimize.

Script that creates a batch file

```
import os, sys

project = os.path.dirname(os.path.dirname(__file__))
processing = os.path.join(project, 'processing')
#source = os.path.join(project, 'source')
build = os.path.join(project, 'build')
sourcedpdf = os.path.join(build, '20180716')

inString1 = "gswin32 -sDEVICE=pdfwrite -dCompatibilityLevel=1.4
-dPDFSETTINGS=/ebook -dNOPAUSE -dQUIET -dBATCH
-sOutputFile=J:\\\\Projects\\\\2018ParcelAtlas\\\\build\\\\optimized\\\\"

inString2 = " J:\\\\Projects\\\\2018ParcelAtlas\\\\build\\\\20180716\\\\"
```

```
batchdoc = os.path.join(processing, "bDoc.txt")

# Main
#####
if __name__ == "__main__":
    list1 = os.listdir(sourcepdf)
    l = open(batchdoc, 'w')
    for i in list1:
        newi = i[1:]
        print newi
        t = inString1 + newi + inString2 + i + "\n"
        print t
        l.write(t)

    l.close()
```

ghostscript

About

ghostscript is used for the optimization. ghostscript is an interpreter for the PostScript language and for PDF [?].

Licensing

ghostscript is available opensource under AGPL conditions. more information can be found [here](#).

Download

ghostscript can be downloladed [here](#).

Windows batch files

A line from the batch file looks like:

```
gswin32 -sDEVICE=pdfwrite -dCompatibilityLevel=1.4  
-dPDFSETTINGS=/ebook -dNOPAUSE -dQUIET -dBATCH  
-sOutputFile=J:\Project\2018ParcelAtlas\build\optimized\  
02-001-001-00.pdf J:\Projects\2018ParcelAtlas\build\20180716  
\_02-001-001-00.pdf
```

5.8 QGIS Tools

Using COGO Tools in QGIS

Set up the Azimuth and Distance Plugin (Azd Plugin).

In the Plugins drop down(1), under the topography group select the **Azd Plugin(2)**(see fig.).

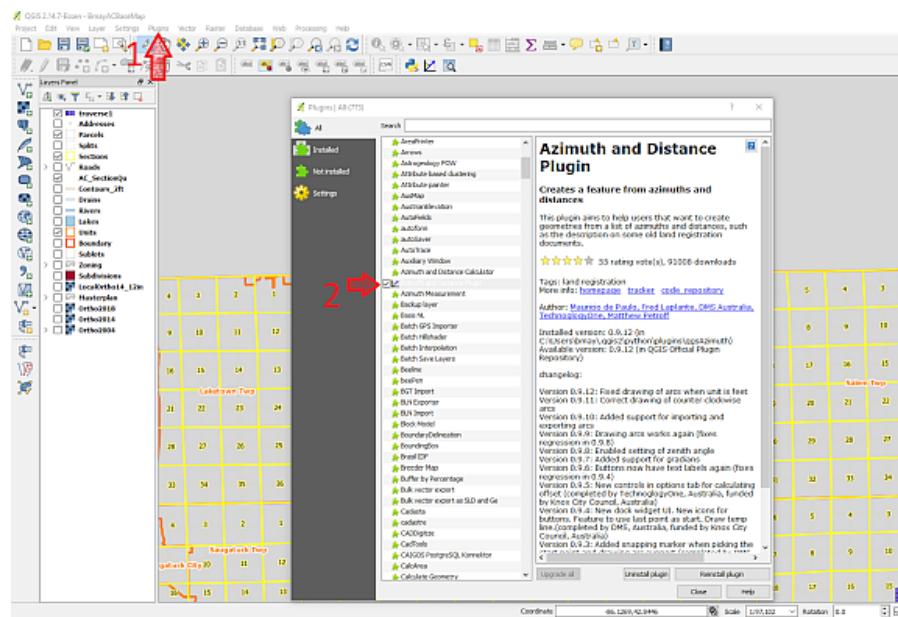

Figure 5.26: launch plugin

Note here which layer is active (see fig.).

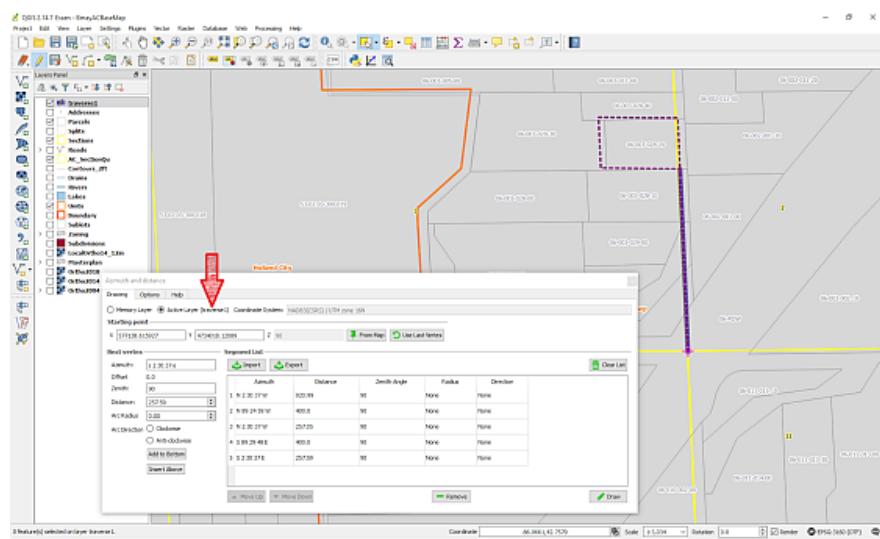

Figure 5.27: check active layer

If necessary, left click the layer *traverse 1* in Layer Panel to activate it(see fig.).

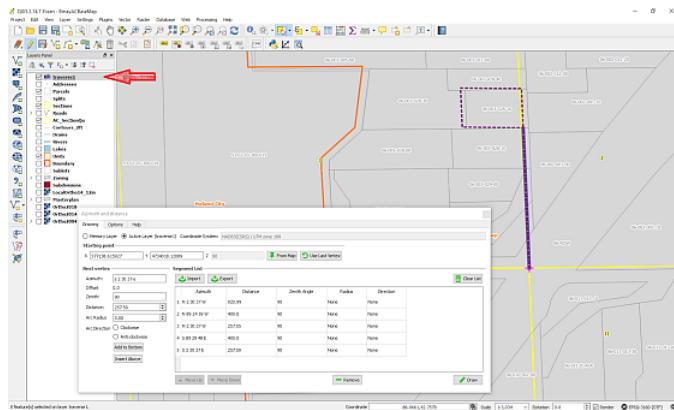

Figure 5.28: activate layer

Configure Options

On Options Tab: Select Boundary, Bearing, Feet, and Degree radio buttons.

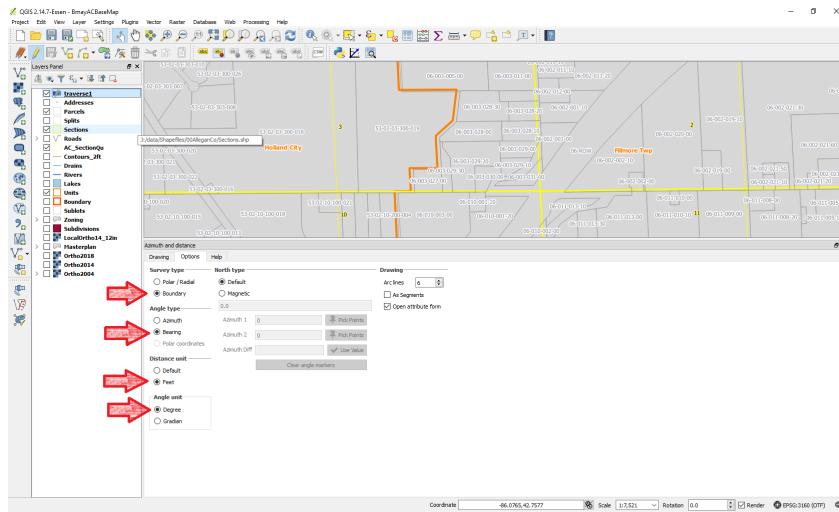

Figure 5.29: Plugin Options

Using the tool

Boundary descriptions are entered into the Drawing Tab. Azimuth (bearing) and Distance are the important boxes (Set Offset = 0 and Zenith = 90 and ignore)(see below).

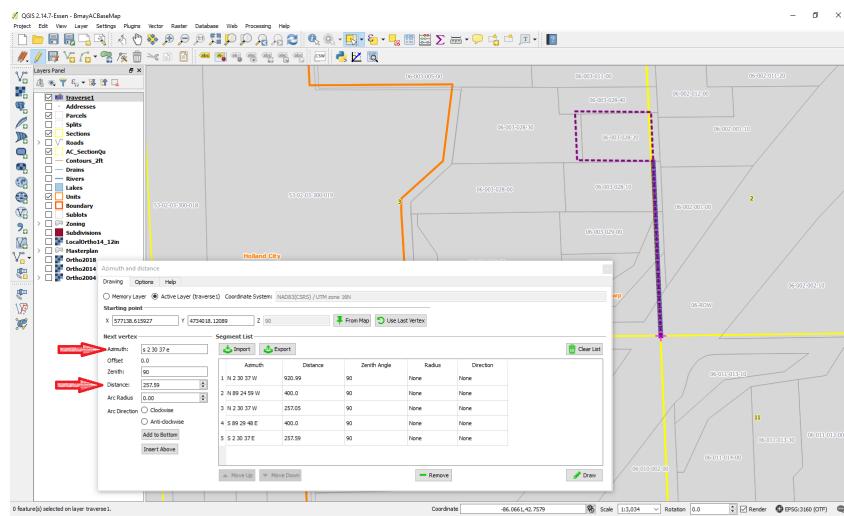

Figure 5.30: Entering Bounds

Configure editing environment

Use Settings Dropdown and Snapping Options to enable snapping to Sections, Quarter Sections, and or Parcels if desired (see fig.).

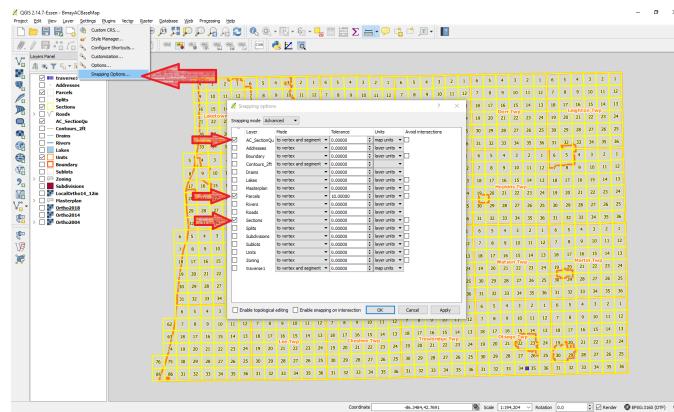

Figure 5.31: Configure editing environment

Locate Point of Commencement

To get to the Point of Commencement,

Use **any combination** of the following methods:

- Using Reference Layer
- Using Measuring Tool
- Search by Parcel Number (Search Layers Plugin)
- Draw COGO lines (Azd Plugin)(as described earlier)

Using Reference Layer

Use reference layers; Units, AC_SectionsQu, Sections, and Parcels. Toggle layers on and off in Layers Panel and zoom in and out with mouse wheel.

Using Measuring Tool

Use the measuring tool, make sure to set units to feet.
To exit current measurement right click (see fig.).

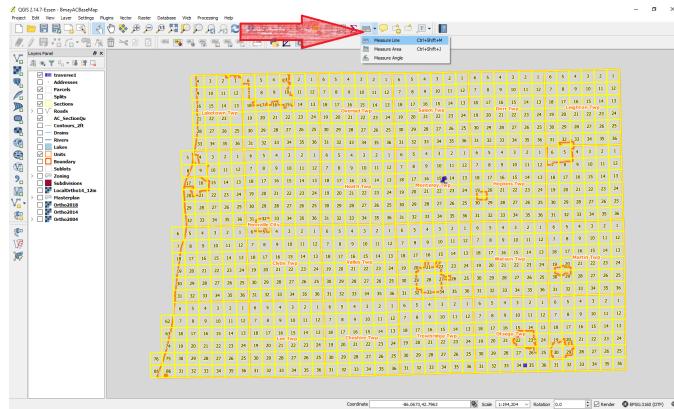

Figure 5.32: Measuring Tool

Search by Parcel Number

(Search Layers Plugin.)

To Launch Search Layers Plugin:
 In Plugins dropdown:
 Enable the **Search Layers** Plugin. (see fig.)

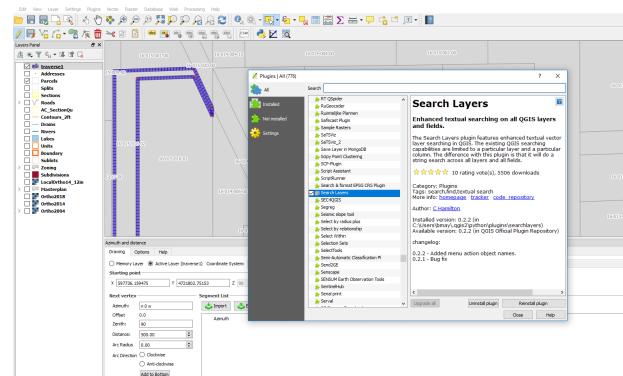

Figure 5.33: Search Layers Plugin

Enter parcel number (with dashes), Set layers, and set search field.(see fig.)

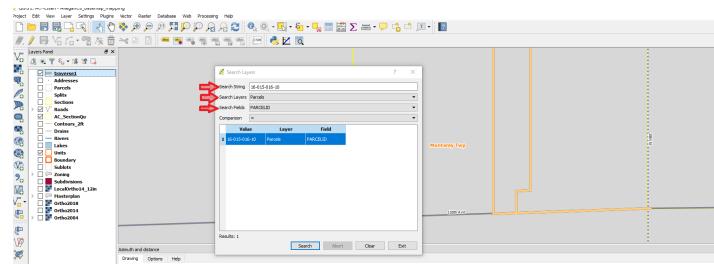

Figure 5.34: Search Layers Setup
